**1. PHILOSOPHY OF FARM BUREAU**

Illinois Farm Bureau recognizes freedom, the dignity and worth of the individual, equal opportunity, initiative and compensation for accomplishment, as basic concepts responsible for our country's progress and stature among the nations of the world. We believe the strength of every civilized society is the family. The encouragement of the family unit where morals, obligations, responsibilities, and work ethics are exemplified and taught is of paramount importance. This must be considered an individual and local responsibility. We believe in the sanctity of private property and individual rights as provided by the U.S. Constitution, as the basis of American freedom and progress. The principles of our economic system derive from and are consistent with our religious values and goals. Through this system the American people have produced abundant goods and services for themselves and for people of other nations and have enjoyed widespread educational advantages and religious opportunities.

We believe in incentives, individual responsibility, initiative, freedom and the right to work without governmental dependence. If our organization and our country are to continue to be free and strong, we must act to determine our own destiny.

Each individual must assume active responsibility for maintaining and strengthening the principles upon which our government was founded and vigorously oppose all programs and policies which erode its foundation. We deplore irresponsible acts of defiance and lack of respect for laws enacted by our elected governmental representatives at all levels.

Illinois Farm Bureau philosophy must represent the thinking of a majority of its members so their organization can achieve maximum effectiveness and influence. The autonomy of the local unit must be maintained to preserve a strong grass roots organizational base.

Illinois Farm Bureau is an organization through which farm people can work together and cooperate with others to strengthen agriculture's role and influence as a vital part of a strong, prosperous economy in a free America.

We will assist members in understanding, influencing, and adapting to the changing realities in production agriculture, the rural economy, and rural family life.

Our national life is founded on spiritual faith and belief in God. We favor leaving "In God We Trust" on coins and currency and "Under God" in the Pledge of Allegiance.

**2. ACTIVATION AND STATUS OF RESOLUTIONS**

Policies of the Illinois Agricultural Association are subject to review at any official meeting of the voting delegates.

Resolutions adopted at this annual meeting state the current position of the Illinois Agricultural Association.

The voting delegates authorize the renumbering, placing, and arranging of the resolutions adopted at this annual meeting with the appropriate subject matter for publication in the current resolutions booklet.

### 3. COMPETITION/MONOPOLIES

The rapid consolidation of agricultural businesses that serve farmers is a growing concern. We will seek information on the merger and acquisition of agricultural businesses and how such mergers and acquisitions will help or hinder our members.

We support:

1. Congress, and the relevant federal agencies, working together to closely monitor the agribusiness sector with the objective that current anti-trust laws are applied and enforced to the fullest extent in order to allow full and fair pricing competition to flourish.
2. Improvements to existing laws and regulations to empower appropriate agencies to conduct expanded anti-trust review and oversight.
3. Anti-trust laws or department operations providing increased protection to competitive markets.
4. Limitations enforced on mergers, acquisitions, and joint ventures by the major competitors in agricultural markets dominated by relatively few firms.
5. Giving the U.S. Department of Justice (USDOJ) broader regulatory authority to include regulation of anti-competitive monopolistic (many sellers, one buyer) business behavior to protect farmers' as well as consumers.
6. Including the U.S. Department of Agriculture (USDA) in the decision-making procedure with respect to proposed mergers and acquisitions.
7. The Illinois Attorney General's office to investigate agricultural monopolies in Illinois and cooperate with other State Attorneys General and USDOJ in investigating regional monopolies.

We oppose mergers, acquisitions, or leveraged buyouts that create a monopoly of production, marketing, and transportation situations or reduce competition in acquiring, pricing, or transporting agricultural commodities and products.

### 4. FARM INCOME AND STRUCTURE

The economic well-being of Illinois farmers will continue to be the NUMBER ONE PRIORITY issue of the Illinois Agricultural Association. We encourage opportunities for all segments of agriculture.

We support:

1. The freedom of individual farmers to make their own economic decisions.
2. Programs and legislation of an innovative nature which increase net farm income.
3. Programs and legislation which could include items such as agricultural recapitalization, farm asset transfer plans, lowering input costs through technology, and beginning farmer education and loan programs.
4. Provisions that will protect farmers' investments, even as unsecured creditors, in prepaid agricultural inputs.
5. Research and development of new marketing, finance, computer, farm business management, and personal development programs as needed to improve member income and efforts to increase members' use of those programs.
6. Monitoring and encouraging appropriate federal and state agencies, and to monitor the retail-to-farm price spreads for all major agricultural commodities.
7. Open markets to link members with economic opportunities, including cooperative ventures, presented by rapid changes in agriculture.
8. Facilitating value-added opportunities for farmers.

- 1 9. Monitoring trends affecting farmers and strive to place an increased emphasis on  
2 educational programs for farmers on various opportunities available.  
3  
4  
5

6 **5. AGRICULTURAL AND VOCATIONAL EDUCATION**  
7

8 We support:

- 9 1. Continuation of agricultural education programs with emphasis placed on the recruitment  
10 and training of qualified agricultural instructors.
- 11 2. Efforts by county Farm Bureaus working closely with their local school districts to establish  
12 and ensure the maintenance, improvement and continuation of agricultural education  
13 programs and FFA. High school agricultural education and the FFA are vital programs for  
14 development of the talent and leadership needed in farming and agricultural service  
15 industries.
- 16 3. Vocational and technical programs including post high school training and retraining.
- 17 4. Retention of primary administrative responsibility for vocational programs at the state and  
18 local levels.
- 19 5. Efforts by county Farm Bureaus to work with their school districts to implement an updated  
20 agricultural education curriculum to meet the needs of today's agriculture. The curriculum  
21 should include agricultural science courses or other classes that would meet the criteria  
22 needed to receive credit for a college prep course.
- 23 6. The inclusion of agricultural projects in school science fairs.
- 24 7. The restoration of state level funding for agricultural education programs.
- 25 8. The recognition of agricultural education as a Teaching Shortage Area by the Illinois State  
26 Board of Education and/or Illinois General Assembly.
- 27 9. Encouraging colleges and universities to offer an internship program as part of their  
28 curriculum for students studying to become vo-ag instructors. The purpose of the  
29 internship would be to gain real world experience by providing hands-on experience  
30 working on a farm, at an agriculture business or for agriculture related organizations. To  
31 provide a variety of opportunities the internship should not be limited to any one type of  
32 farm operation.  
33  
34  
35

36 **6. AGRICULTURE IN THE CLASSROOM**  
37

38 We support an effort to enhance the image of agriculture and promote the positive activities of  
39 farmers and agribusiness. This effort enables students and teachers in the classroom to  
40 understand the importance and contribution of American agriculture to the U.S. economy and all  
41 its citizens. We recommend that a higher priority be placed on increasing resources for Illinois  
42 Agriculture in the Classroom programs. Instruction should be directed to all students of all grade  
43 levels about environmental, nutritional, agronomic, and animal agriculture issues, and will  
44 correlate materials to the standards as prescribed by the Illinois State Board of Education.  
45

46 We encourage all county Farm Bureaus to participate in Illinois Agriculture in the Classroom and  
47 in all agricultural education activities.

## 7. COMMUNITY COLLEGES

We support:

1. Requiring the state to provide a major part of the operating funds for the Illinois Community College program.
2. Special emphasis on vocational, technical and semi-technical training.
3. The charging of tuition as partial support for community colleges.
4. Area-wide representation for Community College Boards.
5. County Farm Bureaus surfacing and supporting candidates from rural areas for Community College Boards.
6. Efforts to revise current associate agricultural degree programs to make the agriculture curriculum more contemporary.

## 8. EDUCATION

18 To ensure quality education for all Illinois children, we endorse the principles of accountability, adequacy, and equity and will actively work to include these principles in any commission, task force, or legislative proposal.

21  
22 Accountability is the efficient use of taxpayers' dollars to provide a comprehensive education to achieve goals with measurable outcomes.

23  
24 It includes the size and structure of school districts, the operation/administration of school districts and performance of school districts in achieving desirable educational outcomes.

25  
26  
27  
28 We support:

- 29 1. Seeking significant long-term solutions to the problems of financing a quality education for all students through political, legislative, or judicial means.
- 30 2. Seeking full funding for general state aid to school districts.
- 31 3. Meaningful state incentives to support voluntary school consolidations.
- 32 4. Teacher/staff professional development to improve teaching quality and to address challenges associated with the School Recognition Process.
- 33 5. Seeking the removal of tenure and replacing it with a merit program for teacher evaluation.
- 34 6. The goal of preserving and strengthening local control of schools.
- 35 7. School district reorganization when determined locally by each district and if approved by front door referendum. The requirements of a reorganization vote should consist of the following:
  - 36 A. Either each board of education initiate the reorganization vote or petitions requesting the reorganization vote from 30 percent of the registered voters in each district be required for a referendum.
  - 37 B. A majority of those voting on the reorganization be required for passage in either a unit or dual district.
  - 38 C. Referendum consideration should be restricted to general elections only.
  - 39 D. Taxpayers in the proposed consolidation area should be given the property tax implications of the proposed consolidation in advance of the referendum vote.
- 40 8. Efforts to allow school district annexation proceedings to occur through approval of the Regional Board of Trustees provided public notice and hearing requirements are met.
- 41 9. The formation of co-operative high schools when such co-operatives would broaden and enhance academic opportunities and will result in economic efficiencies.
- 42 10. Innovative pilot efforts that include creative partnerships with business and industry, higher education and government; encourage exploration of new ideas and new approaches to make schools more effective and efficient. Ideas and approaches should include, but not

- 1 be limited to, Charter Schools, Distance Learning, and new approaches to Vocational
- 2 Education, Special Education, and transitioning to a new educational model centered on
- 3 classrooms that emphasize creativity, innovation and teamwork while helping individual
- 4 students identify their passions earlier in their educational experience.
- 5 11. Policies allowing local initiatives to increase academic time such as restructuring the
- 6 school day, calendar and schedule.
- 7 12. County Farm Bureaus to establish programs which assist members in understanding and
- 8 participating in their schools. Such programs may include meetings with school boards
- 9 and school administration to establish open communications about district operations,
- 10 curriculum development, budgeting and finance.
- 11 13. Full funding of state and federal education mandates by the entity proposing the mandate
- 12 and a full review of those mandates every three years.
- 13 14. Seeking legislation limiting the requirement for schools to fund special education to the
- 14 education component only. The State of Illinois should be required to provide student
- 15 housing and medical care within state or federal agencies.
- 16 15. Requiring a hearing by local school boards before levying a tax for Life Safety and Energy
- 17 Conservation bonds if such bond issues exceed \$100,000.
- 18 16. Evaluating the legislation and rules concerning the waiver of mandates requested by local
- 19 school districts. The legislature needs to evaluate each request on its own merit.
- 20

21 Adequacy is financing education at a level sufficient to fund a comprehensive educational  
22 program.

23  
24 We support:

- 25 1. The concept of using a foundation level of funding as determined in the Education Funding
- 26 Advisory Board report. This level should be recalculated annually and be based on the
- 27 desired level of outcome.
- 28 2. The use of prior year Equalized Assessed Valuation (EAV) to provide accurate information
- 29 for school budgeting and fiscal management.
- 30 3. Retention of categorical grants that address special needs and allow all schools to benefit.
- 31 Revenue from other categorical grants, which are competitive, should be included in the
- 32 general state aid formula.
- 33 4. A State funded capital program to assist school districts in modernizing existing facilities.
- 34 This program should include funding for the Americans With Disabilities Act.
- 35

36 Equity is fairness in educational opportunities for students and fairness in the way education is  
37 funded.

38  
39 We support:

- 40 1. The concept of leveling up (defined as reducing overall variation by increasing the
- 41 expenditure/revenue per student at the lower end of the distribution).
- 42 2. A local individual income tax for education, by front door referendum. The local income
- 43 tax rate should be a fixed flat rate for all school districts. The revenues from such a tax
- 44 could be used as local tax effort, to replace property tax revenues, to enrich educational
- 45 opportunities above the foundation level or some combination thereof.
- 46 3. Requiring an equitable local tax effort in every school district as an important part of
- 47 achieving fairness in educational opportunities for students and fairness in the way
- 48 education is funded.
- 49 4. Increased State investment in technology to increase productivity, enhance student
- 50 achievement, expand learning time and staff development.
- 51 5. Efforts to improve and expand the curriculum and delivery of services in small and rural
- 52 schools through development of a statewide two-way telecommunication system or other
- 53 means of communication technology.
- 54 6. Cooperation between school districts through inter-governmental agreements.
- 55

- 1 7. Working with the State Board of Education to simplify grant application requirements.
- 2 8. The general concepts of the Education Funding Advisory Board (EFAB) of the Illinois
- 3 General Assembly relating to property tax relief, adequate funding for schools, and school
- 4 reorganization.
- 5 9. Teaching concepts of Science, Technology, Engineering and Math (STEM) in public
- 6 schools in the State of Illinois. We support amending these teaching concepts to include
- 7 agriculture: Science, Technology, Engineering, Agriculture, and Math (STEAM).
- 8 10. Monitoring the work of the Vision 20/20 elementary and secondary education reform
- 9 coalition.
- 10 11. Increasing engagement of students in local, state, and federal activities in an effort to gain
- 11 a better understanding and knowledge of the political process and the importance of civic
- 12 engagement.
- 13

14 We oppose shifting responsibility for the state's contribution to the Teachers Retirement System  
15 (TRS) on the local school districts.

## 19 9. HIGHER EDUCATION

21 We support:

- 22 1. Eligibility guidelines for publicly financed college scholarships, loans and grants to ensure
- 23 farm youth have equal opportunity.
- 24 2. Retention and enhancement of agricultural curriculum and research at institutions of
- 25 higher learning.
- 26 3. A coordinated long-range plan developed by the state institutions of higher learning to
- 27 maintain quality agricultural education and research facilities.
- 28 4. Student loans and continued efforts to recover principal and interest from persons who
- 29 have defaulted on their government-backed guaranteed student loans.
- 30 5. Co-Curricular agricultural organizations which allow hands-on experience for students to
- 31 further develop their leadership skills.
- 32 6. A balance between professors' classroom instruction and research time at institutions of
- 33 higher learning.
- 34 7. Continued collaboration between state supported higher education institutions to
- 35 implement standardized curricula, including credit hours awarded and requirement fulfilled
- 36 for the course, to make it easier for students to transfer between all levels of institutions of
- 37 higher learning.
- 38 8. The continuation of the University of Illinois "South Farms." Further university expansion
- 39 and community development should not sacrifice the advantages which the "South Farms"
- 40 currently provide for the teaching and research needs of agriculture.
- 41 9. The continuation and funding of the existing University of Illinois outlying research centers.
- 42 Before any long term changes are made at any of the centers, we encourage seeking
- 43 input from local stakeholders at or near the center.
- 44 10. The study of funding quality and cooperation of agricultural programs at institutions of
- 45 higher education.
- 46 11. Changing the selection process for all state of Illinois funded public university Boards of
- 47 Trustees in order to make the board more accountable to the voters and taxpayers of the
- 48 state. We will also seek changes in how these Boards of Trustees conduct their meetings
- 49 in order to ensure items cannot be added to the agenda and voted on without public
- 50 debate and input.
- 51

52 We oppose:

- 53 1. Efforts of the Illinois Board of Higher Education to mandate additional course requirements
- 54 for entrance to Illinois public universities.
- 55

- 1 2. The selling and privatization of the Illinois Student Assistance Commission's secondary  
2 market student loan portfolio.  
3  
4  
5

## 6 10. UNIVERSITY OF ILLINOIS EXTENSION 7

8 A viable University of Illinois Extension will help individuals, families, farms, businesses, and  
9 communities adapt to change in an increasingly technical world. The University of Illinois  
10 Extension and the Land Grant University system must maintain the expertise needed to train  
11 competent people for programs in agriculture and natural resources, family and consumer  
12 science, 4-H and youth development, and community and economic development. To meet  
13 these goals, the University of Illinois Extension should:

- 14 1. Be a conduit for information exchange between the research community, farmers, and the  
15 citizens of Illinois.  
16 2. Increase clientele access to and understanding of multi-media data information systems.  
17 3. Assess the needs of their clientele and focus their efforts on these needs.  
18 4. Maintain fair and equal access to the University of Illinois Extension resources,  
19 information, and programs.  
20 5. Give counties more flexibility in the hiring practices of educators. The university should  
21 develop options where units may join together to hire specialist(s) to help more farmers  
22 and individuals at the county level.  
23 6. Educate the general public that the University of Illinois Extension is a part of the U.S.  
24 Department of Agriculture.  
25 7. Educate the general public about production agriculture's primary contribution to the food,  
26 fiber, nursery and greenhouse growing industries and other U.S. food sources.  
27

28 We support:

- 29 1. Continued public funding of the University of Illinois Extension and urge county Farm  
30 Bureaus to participate in the development of the University of Illinois Extension as an  
31 efficient educational organization in their county and support the continuation of basic  
32 agricultural education programs for Illinois families.  
33 2. Requiring a full accounting of all transactions of the Extension Unit to be presented to that Unit's  
34 Advisory Council at each regular meeting.  
35 3. Maintaining the conference judging format in order to ensure maximum 4-H member  
36 participation and encourage public display of these projects.  
37  
38  
39

## 40 11. ENERGY 41

42 We support:

- 43 1. The development of a national energy policy to define the energy needs of the nation and  
44 how these needs can best be met consistent with the use of natural resources, protection  
45 of the environment, sound land use, and the welfare of the people. In addition, this policy  
46 should continue to reduce dependency on foreign energy sources with a focus on national  
47 energy security.  
48 2. Independent studies that would compare the different energy programs for our nation's  
49 needs (such as the conversion of wind energy to ammonia) and see how these will impact  
50 the agricultural community.  
51 3. Working with legislators to enable more U.S. oil and gas production by opening known oil  
52 and gas reserves in the Arctic National Wildlife Reserve (ANWR), off shore and on the  
53 U.S. mainland, exploring for additional oil and gas sites, and building new oil and gas  
54 refineries.  
55

- 1 4. Efforts to expedite the pipeline permitting process to bring Canadian crude oil to the
- 2 United States.
- 3 5. Promotion of programs encouraging the increased use of Illinois coal as an important
- 4 component of a national energy policy and source of rural economic development.
- 5 6. Energy conservation and development of information programs to encourage conservation
- 6 of all fuels by all sectors of our economy. We encourage universities and others to
- 7 institute and conduct appropriate research and education programs designed to inform the
- 8 public about energy conservation including the design and promotion of more energy
- 9 efficient equipment.
- 10 7. Research, education, and incentives to further the development of methane and
- 11 renewable sources such as wind, biomass energy, and methane digester systems.
- 12 8. Renewable Energy Standards to encourage the development of more renewable sources
- 13 for energy production.
- 14 9. The market system as the best long-term means of allocating scarce energy resources
- 15 and encouraging development of adequate energy supplies.
- 16 10. Further research of coal gasification technology.
- 17 11. Upgrading the electricity generation and delivery infrastructure to provide consumers
- 18 access to reliable low cost energy.
- 19 12. The basic goals and objectives of the 25x'25 Alliance in promoting renewable energy.
- 20 13. Development of electricity delivery systems that are in the best interest of rural and farm
- 21 residents.
- 22
- 23
- 24

## 25 12. NUCLEAR ENERGY

26

27 We support:

- 28 1. The use of existing nuclear power generators as a source of needed energy along with
- 29 adequate safeguards to ensure its safe and environmentally sound use.
- 30 2. The construction of a new generation of nuclear power facilities and work to repeal the
- 31 State of Illinois' moratorium on construction of new nuclear facilities.
- 32 3. Programs to provide farmers with adequate protection for themselves, their crops and their
- 33 livestock from radiation contamination from nuclear plants or nuclear materials.
- 34 4. Efforts to insure that utilities operating nuclear reactors maintain the appropriate legal and
- 35 financial responsibility for damage to property, livestock and personal health caused by
- 36 the operation or malfunctioning of such reactors.
- 37 5. Federal research on the safe development and use of small and efficient reactors to
- 38 assure the long-term supply of electricity.
- 39 6. The proper agencies of the federal government to address immediately the problem of
- 40 permanent storage or re-use of radioactive waste.
- 41

42 We oppose the siting of nuclear waste facilities near known aquifers where pollution could occur.

43

44

45

## 46 13. RENEWABLE FUELS

47

48 We support:

- 49 1. Expanding the use of all renewable fuels.
- 50 2. Approval and use of greater ethanol blends in high-octane fuels to help automobile
- 51 manufacturers meet increasing regulatory standards.
- 52 3. Making permanent state and federal tax credits and other programs that provide
- 53 incentives for the use of bio-based fuel additives, renewable fuels, cellulosic fuels, and the
- 54 renewal of these tax credits.
- 55

- 1 4. State incentives that stimulate an increase in the demand for ethanol.
- 2 5. Local ordinances requiring self-service filling stations to sell mid-grade E-15 fuels.
- 3 6. The Renewable Fuels Standard 2 (RFS 2) as passed in the Energy Independence and
- 4 Security Act of 2007.
- 5 7. Government-supported research directed toward reducing production costs, improving
- 6 conversion technology, and developing new feedstocks which shall not be limited to
- 7 cellulosic and biomass renewable fuel production.
- 8 8. An increase in the ethanol blending standard.
- 9 9. Programs and efforts to increase renewable fuel production in Illinois.
- 10 10. Investment in and development of the appropriate infrastructure (including, but not limited
- 11 to, the funding of biofuel blender pumps and the standardization of all new gasoline
- 12 dispensers to be UL Certified for a minimum of E-25) to support the expanded use of
- 13 renewable fuels.
- 14 11. The continuation of a renewable fuels use requirement on all state owned and/or leased
- 15 vehicles when and where available.
- 16 12. The cost of purchasing biodiesel as an allowable expense in the Congestion Mitigation Air
- 17 Quality (CMAQ) program.
- 18 13. Federal research for better performing engines that run on E85 fuels.
- 19 14. Research on new uses and markets for co-products of renewable fuels production and
- 20 investigation of synergistic relationships in renewable fuels production systems and other
- 21 potential markets.
- 22 15. Continued research into ruminant and non-ruminant feed utilization of renewable fuels
- 23 Distiller's Dried Grains with solubles (DDGs) co-products and farmer education on
- 24 appropriate use of DDGs in livestock diets.
- 25 16. Quality control standards at renewable fuel plants that result in uniform, high quality co-
- 26 products from renewable fuels.
- 27 17. Testing of ethanol at terminals to ensure uniform quality prior to blending.
- 28 18. Nationwide adoption and implementation of American Society of Testing and Materials
- 29 (ASTM) standards for all renewable fuels.
- 30 19. Requiring retailers to display the percentage blend of biodiesel blend and its content upon
- 31 development of accepted standards and accurate tests to measure those blends.
- 32 20. Efforts to educate consumers and industry on the benefits of biofuel blends higher than
- 33 ten percent.
- 34 21. Federal renewable fuels tax incentives to promote the use of domestically-grown
- 35 commodities for domestically-produced renewable fuels.
- 36 22. The American Farm Bureau Federation (AFBF) and other agricultural and allied
- 37 organizations and industries in aggressive public information campaigns which support
- 38 renewable fuels and challenge any misinformation.
- 39 23. Encouraging farmers, affiliated companies, and other agricultural businesses to use
- 40 renewable fuels.
- 41 24. Renewable fuel use by school districts and units of local government.
- 42 25. Development of engines and air-cooled outdoor power equipment using a higher
- 43 percentage of renewable fuels.
- 44 26. Renewable fuels as an octane or cetane enhancer, fuel source, or lubricity agent to
- 45 improve air quality.
- 46 27. Encouraging automakers to produce more flex-fuel vehicles and those that can run on
- 47 mid-level blends with the goal of eliminating the so-called "blend wall."
- 48 28. U.S. Department of Defense adoption and use of renewable fuels.
- 49 29. Efforts to expand the use of renewable fuel in commercial aviation, maritime, and other
- 50 large-volume users.

51  
52  
53  
54  
55

We oppose:

1. Attempts to defund, repeal, or rollback implementation of the RFS.

- 1 2. EPA's misuse of its "inadequate supply" waiver authority for the purposes of reducing the
- 2 amount of renewable fuel blended.
- 3 3. Expiration of remaining renewable fuel tax credits.
- 4 4. Use of federal renewable fuels tax incentives for imported renewable fuels or renewable
- 5 fuels produced with imported agricultural commodities.
- 6
- 7
- 8

9 **14. UTILITIES AND PIPELINES**

10

11 We support:

- 12 1. Continuation of work for quality rural telephone, broadband, and electric service with just
- 13 and reasonable rates.
- 14 2. The development of a higher visibility and formal involvement in electric rate issues by:
- 15 A. Cooperating with other intervenors in major rate cases involving farmers.
- 16 B. Interacting with the Illinois Commerce Commission (ICC) and utilities seeking to
- 17 modify rate designs to favor agricultural users of electricity.
- 18 C. Monitoring utilities and the ICC to ensure that "cost of service" rate designs and
- 19 regulations are not put in place which would economically harm agriculture.
- 20 3. Building a coalition of groups and organizations with identifiable common interests
- 21 regarding electric rate issues.
- 22 4. Strengthening the working relationship with the rural electric cooperative system.
- 23 5. Working to simplify and streamline the regulation of the utility business while maintaining
- 24 the goal of prompt, effective, and efficient regulation.
- 25 6. The Illinois Department of Agriculture (IDOA) to assume the role of arbitrator in certain
- 26 utility cases involving farmland. Where requested, we will recommend language for
- 27 inclusion in landowners' right-of-way agreements that would appoint the IDOA, Bureau of
- 28 Farmland Protection as arbitrator in certain cases where disputes arise. Upon request, we
- 29 will hold meetings with landowners before and after completion of the project to address
- 30 questions and concerns of landowners.
- 31 7. Working with American Farm Bureau Federation (AFBF) to seek federal legislation
- 32 requiring all federally permitted utility projects to have minimum construction standards in
- 33 place before granting permits to utility companies wishing to construct on farmland.
- 34 8. Efforts to encourage electric suppliers in Illinois to participate in the development and
- 35 management of wind and solar power generation.
- 36 9. Working with electric and gas suppliers in Illinois to evaluate potential load requirements
- 37 for agricultural operations and develop a long range plan to upgrade existing infrastructure
- 38 to handle future demand loads.
- 39 10. The appointment of the ICC and encourage the appointment of at least one commissioner
- 40 who is knowledgeable about agriculture.
- 41 11. Legislation requiring all future underground pipelines being buried across agricultural
- 42 lands to follow the contour of the surface maintaining a minimum topcover of 60 inches.
- 43 12. Action by the ICC to adjust all Illinois utility companies' summer rate time period cut-off
- 44 dates in order to achieve a statewide September 15 summer ending date.
- 45 13. Legislation that would provide for some form of constitutional taxation of underground
- 46 pipelines by the State of Illinois and payment in lieu of taxes to benefit local units of
- 47 government where pipelines are located.
- 48 14. Regulatory oversight of anhydrous ammonia pipelines by the Surface Transportation
- 49 Board due to the monopolistic nature of the industry.
- 50 15. Legislation that would create a surcharge or a fee-based "Pipeline Fund" to address
- 51 potential environmental problems caused by abandoned pipelines.
- 52 16. Legislation requiring pipeline companies to remove abandoned or obsolete pipelines from
- 53 the ground and to ensure that the affected areas be returned to the original productivity.
- 54
- 55

- 1 17. Efforts to assess telecommunication needs in rural areas and ensure that  
2 telecommunication providers in partnership with rural communities meet those identified  
3 needs.
- 4 18. Legislation requiring utility companies to remove municipal taxes from bills of rural  
5 residences.
- 6 19. Requiring appropriate landowner, trustee, or tenant notification in all utility easement  
7 agreements.
- 8 20. Requiring all utilities installing equipment on the right-of-ways to inform the adjacent property  
9 owner at least 30 days prior to the proposed change so the landowner can inform the utility of  
10 field drainage tiles, and if needed, watch the work conducted to make sure that the field tile is  
11 not damaged. If damaged, the utility should be required to properly fix any damage as soon as  
12 possible or within 90 days at the discretion of the landowner or tenant.
- 13 21. Seeking to develop a positive approach, to protect farmland, farm owners, and operators  
14 from losses caused by utility installations. The utilities should be constructed in a manner  
15 to cause the least possible interference with agriculture.
- 16 22. Seeking the requirement, that upon notice to a utility company that owns or controls  
17 underground utilities, including fiber optic equipment and lines, by an individual or entity  
18 who is planning on excavating under or over such lines, the utility company shall excavate  
19 a minimum area to expose such line. This minimum area excavated by the utility  
20 company shall be large enough to allow the individual or entity planning on excavating to  
21 conduct their needed work in a way as not to damage the line.
- 22 23. Seeking legislation requiring all utility and pipeline projects that are constructed/buried  
23 across agricultural land complete an Agricultural Impact Mitigation Agreement (AIMA) with  
24 the IDOA before landowners are contacted about the project.
- 25 24. Seeking legislation that requires pipelines and utilities to enter into an AIMA agreement with the  
26 IDOA and allows for the enforcement of the AIMA by the IDOA when the agreement has been  
27 violated by a utility or pipeline company and the project can be stopped until the project violation  
28 has been corrected.
- 29 25. Seeking legislation to establish an obligation on the part of the ICC to require a finding  
30 from the IDOA that minimum construction standards are required for any proposed utility  
31 projects before companies are granted permits to construct improvements.
- 32 26. Seeking further study on the proper means to compensate farm owners affected by utility  
33 installations. This should require certain minimum standards for compensation  
34 agreements or annual payments for certain structures. Compensation should include cost  
35 of repairs to damaged infrastructure and crop losses as a result of damaged infrastructure.
- 36 27. Seeking legislation to require all utilities, proposing acquisition of rights-of-way for utility  
37 projects, to send written notice of intention to acquire such right-of-way to landowners and  
38 lessees at least 90 days prior to any personal contact with the landowners and lessees for  
39 purposes of negotiating such right-of-way acquisition.
- 40 28. Seeking legislation to amend the Expedited Review provisions of the Illinois Public Utilities  
41 Act to better protect the property rights of landowners who may be impacted by utility  
42 projects. Also remove the 45-day deadline the ICC must follow when ruling on eminent  
43 domain requests for electric transmission line projects filed under expedited review and  
44 instead, request a reasonable timeline for the ruling.
- 45 29. Seeking to eliminate the practice of Citizens Utility Board (CUB) literature being inserted in  
46 vehicle license renewal notices.
- 47 30. Establishing minimum setbacks for overhead transmission lines from sensitive structures  
48 (private and public schools, licensed daycare facilities, residences, hospitals, and  
49 agricultural livestock production facilities) of at least the following distances -- unless  
50 waived by agreement -- from the edge of respective power line easements for new  
51 electrical transmission line projects.
  - 52 A. 100 feet for 50-138 kV line.
  - 53 B. 150 feet for 139-339 kV line.
  - 54 C. 250 feet for 340 kV or larger line.
  - 55

15  
16  
17

## 15. WIND ENERGY

We support:

1. Wind energy generation as a component of the energy portfolio of the U.S.
2. Continuation of the current property tax assessment method and rate for commercial wind turbines in Illinois.
3. The establishment of statewide standards for commercial wind energy conversion systems that provide adequate protection of public health and safety, protect private property rights, and allow for reasonable development of commercial wind energy conversion system projects. Such standards should include, but are not limited to, property setbacks, other siting issues, performance bonds, and ensuring adequate funds are in place for decommissioning.

## 16. ABOVEGROUND FUEL STORAGE TANKS

18 We support revisions to rules regarding aboveground fuel storage tanks to allow each farm to  
19 have enough aboveground fuel storage to receive a transport load of each specific fuel.  
20  
21  
22

## 17. AGRICULTURAL ENVIRONMENTAL PROTECTION

23  
24  
25 We support:

- 26 1. Agricultural practices that recognize economic benefits and the ability to manage risks  
27 involved with production agriculture.
- 28 2. Working with other interested agencies and organizations to assure pollution standards  
29 and tolerances are scientifically formulated and economically feasible.
- 30 3. Farmer participation in voluntary, third-party environmental assessments as a means to  
31 demonstrate compliance prior to an Illinois Environmental Protection Agency (IEPA)  
32 inspection as a means to meet IEPA requirements.
- 33 4. A farmer's right to build livestock buildings and other agricultural structures without the  
34 threat of litigation as long as they abide by current regulations and guidelines at the time of  
35 site approval.
- 36 5. Efforts to provide adequate funds to state and federal agencies for the purpose of aiding in  
37 the construction of agricultural pollution control devices and implementation of other  
38 agricultural practices to meet mandated standards.
- 39 6. Working closely with IEPA to develop communication strategies to livestock farmers that  
40 are not intimidating, do not involve media or press releases, and develop reasonable  
41 timelines to address enforcement issues.
- 42 7. Modification of the Superfund Amendments and Reauthorization Act (SARA) to exclude  
43 farms from the provisions of the Act. Reporting and notification requirements in SARA are  
44 too stringent and inappropriate for farming operations.
- 45 8. Efforts to exempt farmers and others who have legally disposed of materials from liability  
46 provisions of the Comprehensive Environmental Regulatory Cleanup and Liability Act  
47 (CERCLA).
- 48 9. Research and information examining the effects of crop protection and animal health  
49 products on the food chain and the environment.
- 50 10. The development of an overall rating system to measure the acute and chronic effects of  
51 oral and dermal exposure to crop protection and animal health products.
- 52 11. Exempting property owners from financial responsibility for pollution that resulted from  
53 previously-accepted farming practices.  
54  
55

- 1 12. The removal of setbacks on chemical application in conjunction with tile inlet structures
- 2 unless proven necessary by scientific data.
- 3 13. Changes in the Worker Protection Standards so posting of field entrances does not unduly
- 4 alarm consumers about the use of certain crop protection products.
- 5 14. Legislation which will require a verified name and address from the complainants on all
- 6 pollution complaint reports.
- 7 15. Increased government funding to ensure that landowners are adequately compensated
- 8 whenever farmland is used for purposes intended to achieve the government's natural
- 9 resource goals.
- 10 16. Increased dollars for educational, promotional, incentive-based, and technical assistance
- 11 programs and developing the guidelines for the implementation of programs at the local
- 12 level. We also support developing a separate source of funding either under conventional
- 13 agricultural conservation programs or U.S. Department of Agriculture (USDA) Rural
- 14 Development for the establishment of buffers.
- 15 17. Legislation indemnifying farmers and farmowners for the cost of clean-up and other
- 16 damages arising from the pollution of their land by the willful or negligent acts of others.
- 17 18. Congress setting specific guidelines and restraints on federal agencies charged with
- 18 implementing and enforcing federal law. We believe that Congress should provide for
- 19 strong congressional oversight of regulatory and significant agency actions as well as a
- 20 willingness to override unacceptable agency actions. We support congressional scrutiny
- 21 of agencies to prohibit regulatory agencies from administering laws, to deter adoption of
- 22 agency rules and actions that circumvent statutory intent. Specific efforts should be made
- 23 to oversee and to reform the inspection and rule-making authority of the U.S.
- 24 Environmental Protection Agency (US EPA).
- 25 19. Environmental regulations clarifying that any discharge occurring prior to the operation of
- 26 a livestock farm does not require the owner/operator of the farm to obtain a National
- 27 Pollutant Discharge Elimination System (NPDES) permit for the operation of the
- 28 Concentrated Animal Feeding Operation (CAFO).
- 29 20. Efforts by the IDOA to protect pollinators that involve farmer stakeholders and arrive at
- 30 reasonable solutions that protect both crops and pollinators.
- 31 21. The planting of milkweed for Monarch Butterfly habitat in parks, wildlife preserves, urban
- 32 gardens and other non-linear areas that will not create a problem for production
- 33 agriculture.
- 34 22. The planting of pollinator habitat on land currently enrolled in USDA programs.
- 35

36 We oppose:

- 37 1. Efforts to place restrictions or moratoriums on a farmer's ability to manage his or her
- 38 farming operation in a manner consistent with BMPs. Existing operations should not be
- 39 restricted from expansion nor have undue limits placed upon them due to the
- 40 encroachment of others.
- 41 2. Regulations for septic systems that are not science-based and do not take into
- 42 consideration the economic impacts on the homeowner and on the local government.
- 43 3. Requiring a NPDES permit for pesticide applications when the applicator complies with the
- 44 Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA).
- 45 4. The requirement of a CAFO to need an NPDES permit if it does not discharge.
- 46 5. Efforts by the IEPA to regulate stored hay as a stored feed.
- 47
- 48
- 49

## 50 18. ATMOSPHERIC QUALITY

51 We support:

- 52 1. Policies that keep agriculture viable and address the costs and benefits of those programs
- 53 using sound, economic analysis.
- 54
- 55

- 1 2. Alternative energy sources which will minimize atmospheric pollution.
- 2 3. Providing incentives to industries seeking to become more energy efficient or to reduce
- 3 emissions of identifiable atmospheric pollutants.
- 4 4. Cooperation of organizations and governments, foreign and domestic, to develop better
- 5 understanding and research on the implications of atmospheric pollution and the means of
- 6 preventing it.
- 7 5. Providing incentives to individuals seeking to reforest fragile lands that are currently in
- 8 agricultural production.
- 9 6. The development of engines that utilize affordable technology to reduce pollution.
- 10 7. Requiring the Illinois Environmental Protection Agency to use science-based methods
- 11 when identifying violations for atmospheric pollution.
- 12 8. Passage of a Congressional resolution which strips the Environmental Protection Agency
- 13 of its authority to regulate greenhouse gases.
- 14 9. Research on greenhouse gases.

15  
16 We oppose:

- 17 1. Restrictions on existing off-road equipment emissions.
  - 18 2. Any changes in the Corporate Average Fuel Economy (CAFE) standards that reduce the
  - 19 availability of trucks.
- 20  
21  
22

## 23 19. DISPOSAL OF WASTE

24

25 We support:

- 26 1. Waste volume reduction at the source. Every effort should be made to avoid generating
- 27 waste products.
- 28 2. Recycling and reuse. We encourage manufacturers to develop cost-effective uses for
- 29 recyclable products. We will work towards the development of incentives to create
- 30 additional markets and uses for these recycled products.
- 31 3. Retailers and consumers using returnable, recyclable, and degradable containers.
- 32 4. Research on voluntary recycling options for agricultural plastics.
- 33 5. Source separation, which includes:
  - 34 A. Incentives for the return of all glass, plastic, or metal beverage containers.
  - 35 B. Local recycling programs.
  - 36 C. Composting. We support research on the effects of using yard waste on
  - 37 agricultural land.
- 38 6. Research on the effects of energy recovery from incineration.
- 39 7. Combustion for volume reduction. Where it can be shown to be economically feasible and
- 40 environmentally safe, incineration of solid waste before disposing in a landfill.
- 41 8. Landfilling as a final alternative.
- 42 9. Legislation specifying that publication requirements for public hearings on the siting of
- 43 solid waste disposal facilities be the same as those of the Illinois Truth in Taxation Act.
- 44 10. The ability of a municipality to reject the location of a landfill within 1 1/2 miles of the
- 45 municipality's boundary.
- 46 11. Appropriate local governments providing refuse disposal services at a reasonable cost to
- 47 residents within their area if no private services are available.
- 48 12. Efforts for more stringent local enforcement of littering laws.
- 49 13. Improvement of regulations to ensure safe transportation of hazardous waste.
- 50 14. Enforcement of existing laws and regulatory programs which require environmentally safe
- 51 waste disposal systems.
- 52 15. Encouraging county Farm Bureaus to actively monitor permit applications for siting of non-
- 53 agricultural pollution control facilities submitted to their County Boards.
- 54
- 55

- 1 16. Delegation agreements granting counties authority to regulate landfill operations within
- 2 their jurisdiction, including hours of operation and the height of landfills.
- 3 17. Efforts to impose appropriate fines and penalties on waste disposal violations.
- 4 18. Reasonable disposal fees on residential waste to help avoid dumping in rural areas.
- 5 19. Allowing local governments to charge a higher fee, tax or surcharge on special waste and
- 6 out-of-area waste than on local residential waste.
- 7 20. Efforts to have Illinois classify out-of-state waste as stringently as its classification in the
- 8 state of origin.
- 9 21. Regular and thorough inspection of waste disposal sites.
- 10 22. "Landfarming" of contaminated soils to preserve limited space available in landfills.
- 11 23. Research into laser gasification for mining of landfills and disposal of garbage.
- 12 24. Allowing farmers to burn or bury old agricultural buildings and brush on existing sites.
- 13 25. Allowing the burning and burying of building debris in cases of natural disasters.
- 14 26. Changes to the laws and policies regarding used tire collections, including:
- 15 A. An increase in the number of times an individual can participate in a tire clean-up
- 16 event.
- 17 B. Allowing non-governmental organizations to sponsor a used tire collection program.
- 18 C. The Illinois Environmental Protection Agency (IEPA) setting up drop off areas for
- 19 used tires.
- 20 27. Investigation into alternative methods for disposal of urban sludge containing heavy
- 21 metals and continued research on the safe application of urban sludge on agricultural
- 22 farmland. Agencies should make research results on immediate and long-term effects of
- 23 sludge application available to farmers.
- 24 28. An environmentally safe and financially acceptable method to dispose of or recycle used
- 25 oil and unwanted farm and home chemicals.

26  
27 We oppose:

- 28 1. Transportation of solid waste over long distances for disposal.
- 29 2. Efforts which lead to the importation of solid waste into rural areas without proper
- 30 consideration being given to residents neighboring the disposal site.
- 31 3. Attempts to weaken the role of local governments or the criteria by which the sites are
- 32 judged in the siting of non-agricultural pollution control facilities.

## 33 34 35 36 **20. DRAINAGE AND STORMWATER MANAGEMENT**

### 37 38 **Drainage**

39 We support:

- 40 1. More coordination among drainage districts and other government entities in a common
- 41 watershed.
- 42 2. Landowners within an inactive drainage district to reactivate the district or to consolidate
- 43 the district with that of an active neighboring drainage district. In the event that
- 44 reactivating or consolidating a drainage district is not feasible, we encourage all property
- 45 owners, including state and federal entities, to maintain drainage systems on their
- 46 property.
- 47 3. Uniform interpretation of regulations to allow stream and drainage ditch maintenance
- 48 practices consistent with good husbandry, such as removing silt, trees, restoring stream
- 49 banks, and restoring drainage ditches to their optimal condition without the requirement of
- 50 a permit.
- 51 4. Better coordination among the various district offices of the U.S. Army Corps of Engineers
- 52 (Corps) serving Illinois to foster more fair and consistent administration of the Clean Water
- 53 Act and other laws and regulations.

- 1 5. Working with other groups to develop appropriate means to resolve drainage problems  
2 arising from land development and road construction. Such means should include holding  
3 developers financially responsible for damages done to agricultural drainage.
- 4 6. Mandating that units of local government require developers to provide surety bonds to  
5 guarantee full compliance with the drainage law in regard to land development and road  
6 construction.
- 7 7. Techniques and voluntary programs through agencies such as the Natural Resources  
8 Conservation Service (NRCS) that put more emphasis on stabilization of stream banks.
- 9 8. Enforcement of the concepts within the Illinois Drainage Code which prevent all  
10 governmental agencies from using public right-of-way to channel drainage water onto  
11 private land without considering the volume of water being drained or the absorption rate  
12 of the soils receiving the water.
- 13 9. A requirement that soil erosion control be considered as a part of all drainage plans.
- 14 10. A reasonable use standard for management of agricultural drainage.
- 15 11. Making NRCS the lead agency in determining if a drainage project needs a 404 permit  
16 and providing the local contact for that permitting process. If a 404 permit is needed, we  
17 support making the Corps the only agency in charge of issuing a permit for drainage  
18 projects.
- 19 12. Means to require any incorporated area or drainage district with a population of 5,000 or  
20 more to pay downstream drainage districts for maintenance and expansion of waterways  
21 that receive the accumulated increase in water flow.
- 22 13. Drainage districts as independent units of local government and their right to retain  
23 control.
- 24 14. Educational programs for drainage district commissioners concerning their duties, state  
25 and federal regulations impacting them, and the need to properly and routinely maintain  
26 the district's drainage facilities.
- 27 15. Drainage commissioners' authority to accumulate or build up a fund which shall not  
28 exceed an amount equal to the total of five years annual maintenance assessment.
- 29 16. Efforts to exempt prior constructed waterways to drainage channels from archaeological  
30 study requirements.
- 31 17. Efforts to remove beavers and their structures when they alter drainage resources.

32  
33 We oppose:

- 34 1. Unwarranted interference with drainage work.
- 35 2. Legislation that would forcibly diminish or usurp the power and authority of drainage  
36 districts.

### 37 38 **Stormwater Management**

39 We support:

- 40 1. Requiring money collected for stormwater management be used exclusively for control of  
41 runoff in the watershed where it was collected, not in an unrelated watershed.
- 42 2. Representation on any county stormwater management commission to have mandated  
43 broad based makeup, including municipal, engineering, agricultural, industrial,  
44 commercial, and homeowner voting members.
- 45 3. Requiring municipalities to integrate stormwater management control structures and plans  
46 into any new or existing development.
- 47 4. The use of tax credits, abatements, or incentive payments to property owners who  
48 construct, maintain, and use approved stormwater management devices (e.g. catch  
49 ponds, lagoons, holding basins, terraces, contour farming, pasture land, timberland).
- 50 5. Efforts requiring that new commercial and residential developments be planned for  
51 anticipated runoff and constructed with the structures necessary to control it.
- 52 6. Encouraging local governmental units to unite to solve stormwater problems stemming  
53 from impervious surfaces in watersheds within their jurisdictions so long as the power and  
54  
55

- 1 authority of drainage districts are not forcibly usurped or diminished. For purposes of  
2 stormwater management, farmland would not be considered an impervious surface.
- 3 7. Efforts to amend the Soil and Water Conservation District Act to expand the role of the  
4 Soil and Water Conservation Districts to address urban wetland and stormwater  
5 management problems. The Soil and Water Conservation Districts should make every  
6 effort to coordinate and cooperate with other organizations and agencies within the district  
7 to achieve these goals.
- 8 8. Amendments to the enabling legislation of stormwater management agencies that would  
9 explicitly exempt agricultural land and practices.
- 10 9. Reducing the amount of taxes and fees assessed against property for stormwater  
11 management purposes by the amount of taxes and fees assessed against that property by  
12 a drainage district.
- 13

14 We oppose:

- 15 1. Granting any stormwater management authority the power to regulate farmland drainage.  
16 2. The establishment of a county stormwater runoff management planning commission  
17 without voter approval.  
18 3. The use of eminent domain by a stormwater commission except for specific and  
19 immediate use for stormwater runoff control.  
20 4. The involuntary dissolution of agricultural drainage districts and their administration and  
21 taxing levy being assumed by the county stormwater commission.  
22 5. Any efforts to require agriculture to pay for more than its fair share of any taxing plan or  
23 any effort to force agricultural lands to receive excessive and unobstructed runoff caused  
24 by upstream development that lacks reasonable stormwater management structures.
- 25  
26  
27

## 28 21. DUE PROCESS

29

30 We support:

- 31 1. Requiring all governmental agencies to notify landowners and farm operators of possible  
32 violations in writing, stating specific findings and charges on all farm visits.  
33 2. Landowners and farm operators be given a reasonable amount of time to correct the  
34 possible violations before legal action is taken by the governmental agency.  
35 3. Governmental agencies being required to prove intent to violate as a part of every  
36 prosecution.  
37 4. Any conviction being based on due process, including trial by jury.  
38 5. Governmental agencies, should they lose a court case, being held accountable for court  
39 costs and associated costs to landowners and farm operators.
- 40  
41  
42

## 43 22. ENDANGERED SPECIES

44

45 We support:

- 46 1. A single agency to implement and enforce the various provisions and regulations of the  
47 Endangered Species Act.  
48 2. The use of the National Fish and Wildlife Services' endangered species list in projects  
49 affecting multiple states.
- 50

51 We oppose:

- 52 1. The recognition of species that are considered under threat versus endangered to be a  
53 factor in determining the feasibility of development projects both public and private.
- 54  
55

53  
54  
55

- 2. The recognition of a potential habitat, without the current presence of an endangered species, as a reason for halting or delaying public and private development.

**23. FARMING METHODS**

We support farming methods that result in:

- 1. Profitability.
- 2. Environmental stewardship.
- 3. The production of a safe food supply.
- 4. An adequate supply of high quality agricultural commodities to meet current and future demand.

We support:

- 1. Research aimed at reducing overall inputs needed to sustain a profitable farming operation.
- 2. Incentives that encourage farmers to accept the risk of testing non-traditional means of farming.
- 3. Efforts to provide information to farmers on proven means of improving the efficiency of inputs.
- 4. Research to study soil health and its future productivity.
- 5. The use of an integrated pest management program to control pests in crop production.

We oppose any attempt to mandate low input methods of farming.

**24. FORESTRY**

We support:

- 1. Incentives for the development of private forest resources in Illinois.
- 2. The planting of trees on land that is unable to meet conservation compliance standards to help control soil erosion and increase timber resources.

**25. GLOBAL CLIMATE CHANGE**

We support:

- 1. Science-based research, not consensus, to conclusively determine the causes and impact of global climate change.
- 2. Scientific research to document the regional value of agricultural practices in carbon sequestration. The U.S. Department of Agriculture should be the lead agency on researching carbon sequestration values for agriculture.

We oppose any regulations or treaties relative to global climate change that will unfairly impact U.S. agriculture and the U.S. economy.

## 26. HIGHLY ERODIBLE LAND

We support:

1. Efforts to alter Highly Erodible Lands (HEL) determination and classification to reflect the applied permanent conservation practices (i.e. terraces and diversions) that reduce the soil loss factor on soils that would normally be highly erodible. If the reduction in soil loss makes the land NON-HEL, the land should be so classified and remain so classified as long as the permanent conservation practices are maintained as designed.
2. Variances in conservation practices for livestock farmers so they can utilize crops or crop residue without jeopardizing conservation compliance regulations. These practices should include, but not be limited to, pasturing livestock, chopping silage, harvesting crop residues, and manure incorporation.
3. Local Natural Resources Conservation Service (NRCS) personnel working directly with farmers in coordinating the repair of damage from normal farming practices to fields with an HEL designation. The NRCS should consider field condition limitations before imposing penalties for non-compliance.

## 27. MINED LANDS

We support:

1. Working with private, county, state, and federal groups and agencies in the development and strict enforcement of regulations for mined and undermined lands which will give proper consideration to needs and priorities of agriculture as well as energy and which will protect and restore agricultural lands.
2. Working with other interested groups in developing reasonable solutions to problems of subsidence and means to minimize subsidence in future mining operations. The landowner shall receive fair compensation for any subsidence which occurs.
3. The Office of Mines and Minerals to include irrigation and other agricultural wells in the protection clauses under Illinois regulations concerning subsidence from underground mines.
4. A bonding requirement for coal companies that receive fly ash from coal combustion plants to address groundwater concerns and cleanup.
5. Developing an educational program on mineral and subsidence rights for landowners and support mining methods that maintain property values.
6. The review of the impact of mining activity and how it affects the market value of property. Should this effect be negative, we will seek legislation to compensate landowners for this loss.
7. Requiring mine operators to compensate landowners and tenants for production losses.
8. Requiring mine operators to compensate landowners and tenants for increased cost of federal crop insurance when the farmland has been rerated due to mining operations.
9. County Farm Bureaus becoming involved in reviewing proposed reclamation plans prior to the issuance of mining permits and to closely monitor such reclamation plans after mining to see they are being properly implemented.

51  
52  
53  
54  
55

## 28. MINERAL INTERESTS

We support:

1. A requirement that data from core tests of coal and fluorspar exploration be made available to the public after one year in the same manner that data on oil and gas wells are made available to the public.

- 1 2. Legislation to require the owners of oil and gas interests that have been severed from the  
2 existing surface ownership to provide to the surface owner:
  - 3 A. A 30-day notice before entry is made onto the surface for oil and gas exploration  
4 and recovery.
  - 5 B. Compliance with minimum reclamation standards to minimize surface impacts of  
6 such operation and full clean-up of oil and gas sites.
  - 7 C. Complete compensation payable to the surface owner or tenant for damages  
8 incurred during such operation and annual production losses incurred by the  
9 presence of roads, tank batteries, well heads, and oil and gas production  
10 equipment.
  - 11 D. Complete compensation for the loss in land value due to drilling operations.
- 12 3. Legislation requiring the operator of an oil and gas well to bury all electrical lines to a  
13 depth not less than 36 inches from the surface unless otherwise agreed to by the  
14 landowner.
- 15 4. Continued efforts to strengthen and clarify existing rules and regulations relating to oil and  
16 gas well site reclamation, well capping and well waste disposal, and to inform members of  
17 those regulations.
- 18 5. Establishing regulations for hydraulic fracturing and horizontal drilling on site preparation,  
19 drilling, well-casings, pipelines, waste-storage, and other appropriate safeguards in order  
20 to protect land and water resources.
- 21 6. Legislation requiring all new underground flow lines constructed as part of a high volume  
22 horizontal fracturing well site, production facility, or any oil or gas drilling operation which  
23 crosses agricultural land, shall be buried following the contour of the surface with a  
24 minimum of 60 inches of topcover.
- 25 7. Legislation which requires an operator of an oil or gas well to post and maintain a  
26 performance bond to protect the surface owner in the event that the operator abandons  
27 drilling, fails to plug the well(s) or restore the surface; or fails to provide complete  
28 compensation to the landowner for damage.
- 29 8. Legislation requiring individuals or companies seeking to acquire oil and gas mineral  
30 interests from landowners to provide the landowner a written summary of the landowner's  
31 legal and property rights relating to the actual exploration and production of oil and gas  
32 prior to any negotiation for the lease or purchase of such mineral interests.
- 33 9. Efforts by government agencies or private sector to address salt water contamination from  
34 abandoned oil wells.
- 35 10. A dedicated fund to address environmental problems related to abandoned oil and gas  
36 wells. Consideration should be given to additional funding for these activities.
- 37 11. Efforts by government agencies or the private sector to create and maintain an accurate  
38 and current listing of mineral rights owners for each tract of ground.
- 39 12. Legislation that would revert ownership interests of coal, oil, gas, and all other minerals (if  
40 unclaimed, unused, or dormant for a period of up to 20 years) back to the surface estate  
41 owner.
- 42 13. Landowners and owners of rural property being justly compensated by coalbed methane  
43 operators when landowner's property is being drilled upon in the absence of an agreement  
44 with the landowner.
- 45 14. Legislation that would revert ownership rights of utility, pipeline, and underground gas  
46 storage easements or leases back to the surface owner if unused, abandoned, or dormant  
47 for a period of 20 years.
- 48 15. Efforts by the Illinois County Assessment Officers Association to require oil and gas  
49 operators and first purchasers of oil and gas to report well production with accuracy to  
50 county assessing officials within a workable timeframe each year, or be subject to a fine  
51 for failure to report. This would include each county assessing official, where oil and gas  
52 production occurs, receiving an annual free copy of all pipeline reports.

54  
55

We oppose:

1. The transfer or production of mineral rights or related rights (including subsidence rights) by any public body without first offering those rights back to the current owner of the surface estate.
2. Any moratorium on horizontal drilling and hydraulic fracturing in Illinois.

## 29. ORGANIC NUTRIENT MANAGEMENT

Manure is a plant nutrient material. It is a valuable resource and, when combined with bedding material, a residue source.

We believe:

1. County Farm Bureaus should develop a better understanding among farmers and the public of issues concerning organic nutrient management.
2. Ongoing research should be encouraged to determine air quality and odor parameters that provide scientifically-proven levels for livestock health and worker safety.
3. There must be no direct discharge from manure storage systems or livestock facilities to surface waters, drainage ditches, or field tiles due to negligence, poor management, and faulty structural design. Direct discharges due to natural causes should be exempt from civil and punitive penalties and damages.
4. Research on manure management is a high priority including such topics as odor reduction, waste and nutrient management, and artificial wetland remediation of nutrients. Some flexibility should be allowed in wetlands management.
5. Any proposed law, rule, or regulation which would restrict a farmer's nutrient management plan shall only be implemented if consistent with Best Management Practices (BMPs) developed at the state level with the cooperation and assistance of our state land grant institutions with considerations given for local conditions.
6. Government agencies must utilize proven scientific practices and cost/benefit analyses when developing policies concerning organic nutrient management facilities and application of manure.
7. Additional government cost-share funding should be made available to farmers for constructing manure handling facilities to correct existing problems.
8. That the development and enforcement of organic nutrient management standards are best handled at the state level but any dialog on national environmental standards or legislation for organic nutrient management must be based on proven science and generally-accepted agricultural BMPs and should comply with the above points. The authority for enforcement and implementation of these standards should be clearly defined to protect farmers from differing interpretations by state or federal agencies.

We support:

1. Programs to educate farmers on techniques regarding properly-managed organic nutrient systems.
2. A public relations program to emphasize methods by which farmers protect the environment by using properly-managed organic nutrient systems.

We oppose requiring livestock operations to obtain permits for application of livestock manure.

55

**30. PESTICIDE APPLICATION, EDUCATION, AND RECORDKEEPING**

Proper understanding and handling of crop protection products is important to every farmer.

We support:

- 1. The pesticide applicator certification as a means to assure society that farmers and other licensed applicators are trained and knowledgeable.
- 2. Encouraging pesticide applicators to be aware of liabilities for drift to all crop and non-crop land that is pesticide-sensitive.
- 3. Encouraging non-agricultural users of pesticides to become better educated on their safe use and potential environmental impacts.
- 4. Urging the Illinois Department of Agriculture (IDOA) to review any incorrect Illinois Pesticide Applicators' License exam answers to give applicants the opportunity to become more knowledgeable.
- 5. Giving individuals the option of either taking training and testing of all license categories online or in the classroom.
- 6. Amending current private applicator license procedures to create a license that is valid for five years.
- 7. Federal law that mandates U.S. Environmental Protection Agency to use university data and other credible agricultural industry sources to determine actual pesticide usage levels.
- 8. Restricted use pesticide recordkeeping that protects the interests and confidentiality of farmers and their records.
- 9. Making IDOA the lead state agency to implement and administer all pesticide recordkeeping.
- 10. Increased funding for the United States Department of Agriculture (USDA) to increase credible information on pesticide use collected by the National Agricultural Statistics Service (NASS).
- 11. A change in statute and/or regulations that would allow a custom applicator service to be assigned the responsibility of keeping pesticide application records for landowners and operators.

We oppose any pesticide recordkeeping requirements that create additional farmer liability for applying pesticides according to label instructions.

**31. RIVER CONSERVANCY DISTRICTS**

We support:

- 1. Legislation requiring petition signatures containing at least 10 percent of the registered voters within a proposed district be secured in order to place the question of creating a new district on the ballot.
- 2. Legislation providing means for disconnecting lands not benefited from an established district.
- 3. Legislation requiring wider publication and notice of public hearings.

## 32. RIVERS, LEVEES AND FLOODPLAINS

### Rivers

We support:

1. Pursuing actions in Congress and appropriate federal and state agencies to ensure that we have an efficient and competitive transportation system through which we can effectively move agricultural and commercial products.
2. Working with other interested groups to improve the lock and dam systems on the Mississippi and Illinois Rivers. As a part of that effort, we support construction of 1,200-foot locks on the Mississippi River at least at Keokuk and below and on the Illinois River at least at Peoria and below.
3. A Midwestern, multi-state effort to review results of existing river and related studies and identify impacts of associated state and federal regulations. Based on these studies, we will promote a multiple-use strategy for the Upper Mississippi River and its navigable tributaries to serve agriculture, industry, recreation, transportation, and the environment. A comprehensive plan must be fair, clear, and equitable for all counties adjacent to or affected by river flooding. Money appropriated for projects should be used by that project if at all possible.
4. The development of a balanced and comprehensive river management plan by the U.S. Army Corps of Engineers (Corps) under the auspices of the Mississippi River Commission (MRC).
5. Encouraging the MRC to use its authority to promote improvements to navigation, economic development, flood control, recreation, and environment within the Upper Mississippi River basin.
6. Seeking representation on the MRC to include at least one member from the Upper Mississippi River area.
7. Encouraging members of Congress to become actively involved in the Mississippi River Congressional Caucus.
8. Efforts to increase the Operations and Maintenance budget to maintain navigation, recreation, and flood control systems.
9. Encouraging the consideration of Public Private Partnerships (P3) as a way to capitalize Corps of Engineers' infrastructure projects.
10. An analysis of the effects of changing the hours of operations of any lock and dam. This analysis should look at the effect on the Corps, local communities, and the businesses who use or are affected by the lock and dam. Public input should be sought.
11. Appropriations for the maintenance and operation of the Kaskaskia River lock and dam.
12. Requiring government agencies to send notification about new streambank initiatives to landowners whose property is adjacent to and may be impacted by those initiatives.

### Levees

Illinois has greatly benefited from the construction of flood control levees and their associated systems along its rivers. Many have now exceeded their life expectancy and flooding poses a significant threat to surrounding property.

We believe federal and state government agencies should be committed to assisting with the timely repair and maintenance of levees on the main rivers and their tributaries. After a disaster occurs, repairs should be made in "emergency" mode. We believe adequate funds should be made available to the Corps, Natural Resources Conservation Service, and other appropriate agencies to assist in the repair of levees on the main rivers and their tributaries.

1 The Corps of Engineers should be the lead agency for setting standards used to certify levees as  
2 protecting against certain levels of flooding. These standards should include provisions to allow  
3 reasonable flexibility in administration of the rules such as:

- 4 1. If the capacity of the levee is found deficient, adequate time should be allowed for repairs  
5 before decertification.
- 6 2. Rules should account for acceptable levels of permeability in sand levees and the  
7 capability to bolster levees during flood fights.

8  
9 We support:

- 10 1. Efforts to remove silt from rivers and to promote the use of that material behind the levee  
11 for strengthening the levee system.
- 12 2. Efforts to secure federal and state funds for constructing certified levees and associated  
13 systems on major rivers. To evaluate the appropriateness of that funding, we support the  
14 concept of using Risk Informed Decision Framework (RIDF) that would address four  
15 evaluation areas: national economic development, environmental quality, regional  
16 economic development, and other social effects. The RIDF approach should recognize  
17 the potential for future economic development.
- 18 3. The use of regional economic development benefit:cost ratios in addition to other  
19 considerations in determining support for waterway and flood control projects.
- 20 4. Equitable treatment of intangible benefits in calculating the benefits of levee construction  
21 projects. We encourage the Corps to fully restore damaged levees to no less than pre-  
22 existing conditions in a timely fashion. Those levees that are purposely destroyed by the  
23 Corps should be fully restored prior to the next normal high water season.
- 24 5. Efforts to allow drainage and levee districts to restore a levee to its highest approved flood  
25 frequency design and/or profile without being limited by water level mitigation  
26 requirements.
- 27 6. A uniform federal floodplain standard (also adopted by the states) allowing a one-foot rise  
28 in floodwater height for flood protection projects on major rivers and other bodies of water  
29 bordering two or more adjoining states.
- 30 7. Streamlining the process of permitting the repair and/or construction of levees and other  
31 flood control devices while maintaining the strict adherence to that section within the  
32 Illinois Rivers, Lakes and Streams Act that requires permitting prior to repair and/or  
33 construction.
- 34 8. Using hydrology studies and other pertinent information developed within the  
35 Comprehensive Plan to expedite the permitting process for flood control projects within the  
36 scope of the plan. A timeline should be developed to establish target beginning and  
37 completion dates for each project within the Comprehensive Plan to help move those  
38 projects along in a more efficient and timely manner.
- 39 9. Legislation that provides the Corps the authority and funding to develop and construct  
40 streambank and shoreline protection projects to prevent erosion damages to  
41 infrastructure.
- 42 10. Adoption of Base Flood Elevation impact mitigation standards for construction within the  
43 floodway in Illinois similar to those in Iowa or Missouri so that the same level of activity can  
44 occur on the Illinois side of the Mississippi River as does in those adjoining states.
- 45 11. The Corps' Comprehensive Plan with the following conditions:
  - 46 A. The Plan must include reconstruction of existing levees and ancillary flood  
47 reduction system components to ensure they function at their approved design  
48 capacity.
  - 49 B. Existing levees within the reach of the Plan that are of sufficient height but lack  
50 other necessary features (such as seepage wells and proper slope) should be  
51 allowed to be improved to qualify for Federal Emergency Management Agency  
52 (FEMA) certifiable 100-year flood frequency protection.

- 1 C. The Len Small Levee and Drainage District should be incorporated as part of the  
2 Plan. It should enjoy the same right to pursue improvement and rehabilitation as is  
3 afforded other levee districts not eligible for 500-year flood frequency protection.  
4 D. All acres currently protected by levees should maintain at least their current level of  
5 protection.
- 6 12. Federal funding for improvement to levees to maintain the existing level of flood frequency  
7 protection when induced increases in floodwaters occur due to the adoption of a  
8 Comprehensive Plan for Flood Control.
- 9 13. Urging the Corps to adopt water flow management policies that avoid the flooding of  
10 farmland situated below any reservoir, dam, or behind any levee system managed or  
11 controlled by the Corps.
- 12 14. Urging state and federal agencies to provide timely assistance to local levees during a  
13 crisis.
- 14 15. Eliminating the duplication of levee inspections with resulting cost savings to be used for  
15 levee improvements.

### 17 **Floodplains**

18 The National Flood Insurance Program (NFIP) should be designed to provide insurance, not  
19 regulate land use. It should not be designed to revert the floodplain to its (historic, former)  
20 undeveloped state. Furthermore, rules and regulations regarding floodplain management should  
21 not supersede private property rights.

22  
23 Agriculture in a floodplain should be given recognition as providing positive benefits to the  
24 environment and the public good. These intangible benefits should receive the same  
25 consideration in benefit: cost analysis as do other environmental benefits.

26  
27 A one-size-fits-all approach to floodplain regulations does not accommodate the unique physical  
28 differences among floodplains. Regulations, including NFIP, should recognize those differences,  
29 which range from the expansive floodplains of major rivers to narrow riverines to non-riverine  
30 depressions.

31  
32 We will seek revisions in FEMA regulations to:

- 33 1. Fund and allow the Army Corps of Engineers to coordinate all flood fighting efforts.  
34 2. Increase efforts to improve the coordination and cooperation of FEMA and other  
35 government agencies in order to streamline the process to deliver emergency assistance  
36 in a timely manner during a disaster and the disaster recovery process.  
37 3. Allow the limited issuance of certain construction permits by units of local government  
38 where the applicant has assumed all risk for flood damage to the structure without  
39 jeopardizing the receipt of NFIP funds and other federal monies for those who wish to  
40 participate in federal insurance, disaster, and loan programs.  
41 4. Provide NFIP and disaster payment eligibility for production agriculture facilities and farm  
42 residences protected by a levee, including levees that provide protection from less than  
43 100-year floods. The insurance offered for such structures should be at a rate which  
44 reflects the degree of protection provided by the levee.  
45 5. Allow structures located in a floodplain that are “substantially damaged” by means other  
46 than a flood to be rebuilt without regard to NFIP regulations and to maintain flood  
47 insurance eligibility.

48  
49 We support:

- 50 1. Amendments to federal regulations and policy that would require dewatering of agricultural  
51 land as part of flood recovery efforts.  
52 2. FEMA interim guidelines for wet flood-proofing of agricultural structures and efforts to  
53 make them permanent.  
54  
55

- 1 3. Allowing the replacement construction costs of a structure to be used instead of market  
2 value to measure the damage to a structure for purposes of determining whether  
3 “substantial damage” has been done.
- 4 4. Revising NFIP regulations to allow counties and municipalities, at the local unit’s  
5 discretion, to sell to private owners those properties bought out by FEMA. In such cases,  
6 the property should include an easement restricting surface development rights but  
7 allowing normal agricultural practices.
- 8 5. Continuation of NFIP exemption of property behind properly designed, built, and  
9 maintained 100-year certified levees, dams, and other flood control infrastructure.
- 10 6. Efforts to educate and inform legislators, regulators, media, farmers, environmental  
11 leaders, and the public about the economic and societal benefits and issues associated  
12 with the agricultural and commercial use of expansive floodplains.
- 13 7. Working to preserve statewide permits authorized by the Illinois Department of Natural  
14 Resources-Office of Water Resources for certain construction, transportation, and  
15 infrastructure maintenance projects in floodplains at no cost to individuals, businesses, or  
16 units of government.

17  
18 If a levee’s flood level protection certification would be lowered due to a revised flow frequency  
19 study, structures that existed behind the levee prior to the re-certification should be grandfathered  
20 and managed under the NFIP as though the higher flood protection certification still applies.  
21 Structures built after the levee’s re-certification should be managed under the rules that apply  
22 with the then current certified flood protection level.  
23  
24  
25

### 26 33. SOIL CONSERVATION

27  
28 Soil erosion is a threat to the long-term productivity of agriculture. Farmers and landowners  
29 should strive to implement soil conservation practices.  
30

31 We support:

- 32 1. Efforts to maintain local Soil and Water Conservation District (SWCD) offices, while  
33 improving efficiencies, to provide technological assistance and project certification.
- 34 2. Soil conservation programs using education, voluntary compliance, financial incentives  
35 and other non-punitive means to encourage compliance. Farmers should not be  
36 penalized for a “first offense” failure to meet residue requirements if they have made a  
37 good faith effort to follow their conservation plan, or for failure to obtain mandated residue  
38 cover following crop failure. Any penalties for subsequent violations should not exceed  
39 the farm program benefits on the tract number in violation. The provision of cost sharing  
40 by government agencies must be a prerequisite to any compliance program.
- 41 3. Increasing funding and technical support for various state and federal programs to assist  
42 farmers, landowners, and drainage districts in controlling erosion and runoff, including  
43 streambank stabilization. Available resources should be targeted to those areas where  
44 greatest problems exist and programs are being implemented.
- 45 4. Using available funding sources, such as the Regional Conservation Partnership Program  
46 or Illinois EPA Section 319 grants, to support SWCD efforts.
- 47 5. Inclusion of conservation practices that address soil erosion, sediment control, and water  
48 quality concerns brought on by community development in the Natural Resources  
49 Conservation Services’ (NRCS) National Handbook of Conservation Practices.
- 50 6. Unrestricted technical and educational services of NRCS to municipalities, other local  
51 governments, and non-governmental entities within funding parameters.
- 52 7. Legislation that would protect landowners from liability resulting from the malfunction of  
53 terraces and structures constructed according to NRCS guidelines.  
54  
55

- 1 8. Amendment of the election process currently used by Soil and Water Conservation
- 2 Districts (SWCDs) to allow SWCD directors to be elected with the stipulation that the
- 3 election be structured so that no more than one director may be elected from any township
- 4 in any election.
- 5 9. Maintaining county SWCDs under the administration of the Illinois Department of
- 6 Agriculture and funding for SWCD staff at compensation levels comparable to that of state
- 7 employees.
- 8 10. Research on the concept of economic benefits of green payments to farmers.
- 9 11. Concepts would include guaranteeing farmers a payment for implementing new
- 10 conservation practices. This could be initiated through a public/private partnership
- 11 program.
- 12 12. Including funding for technical assistance in the overall costs to implement government
- 13 programs addressing natural resource or environmental issues.
- 14 13. Adequate state and federal funding for updating soil surveys.
- 15 14. Allowing an exemption to the NRCS manual for Environmental Quality Incentives Program
- 16 (EQIP) money to be used for streambank stabilization practices prior to the adjacent land's
- 17 expiration in a Conservation Reserve Program (CRP) contract or a Conservation Reserve
- 18 Enhancement Program (CREP) contract.
- 19 15. Amending the Prevailing Wage Act so it does not apply to state funded conservation
- 20 incentive payments.
- 21 16. Public/private partnerships to provide consumer education programs on conservation
- 22 practices.
- 23 17. Encouraging local governments and developers to utilize all practical means to control
- 24 non-farm soil erosion.
- 25

26 We oppose the use of state or federal conservation funds for conservation practices on land that  
 27 is in the process of being developed. The SWCD and/or the NRCS shall require monies to be  
 28 returned if land is converted to non-production agriculture use in ten years or less after receipt of  
 29 state or federal funds. This may include land that has been platted or sold to a developer.  
 30  
 31  
 32

### 33 **34. VOLUNTARY ECOSYSTEM PRESERVATION**

34  
 35 We believe there is an opportunity to preserve in a natural condition at least a portion of Illinois  
 36 ecosystems. We are willing to work with others to accomplish this goal.  
 37

38 A preservation habitat program should:

- 39 1. Be voluntary.
- 40 2. Provide the ability for the landowner to terminate the agreement.
- 41 3. Not use eminent domain.
- 42 4. Not rely on property taxes.
- 43 5. Have no negative impact on adjoining property owners.
- 44
- 45
- 46

### 47 **35. WATER QUALITY AND WATERSHED PROJECTS**

48  
 49 We support:

- 50 1. Sound scientific peer-reviewed data being used as the basis for treatment of non-point
- 51 sources under the Clean Water Act or other similar water quality laws at the federal or
- 52 state level.
- 53 2. Funding research on best management practices (BMPs) of agricultural crop production
- 54 products.
- 55

- 1 3. The involvement of agriculture, including county Farm Bureaus and drainage districts, in  
2 watershed group planning efforts.
- 3 4. Increased funding for comprehensive watershed planning and voluntary, incentive-based  
4 implementation of BMPs as a result of the planning.
- 5 5. Programs to educate farmers and the general public of the need to protect and/or improve  
6 water quality and the various BMPs to accomplish those goals.
- 7 6. Farmer adoption of the Nutrient Loss Reduction Strategy (NLRs) through voluntary  
8 implementation of BMPs.
- 9 7. The development of new and the enhancement of existing incentives for adopting  
10 voluntary BMPs on all private land to improve water quality and wildlife habitat.
- 11 8. Policies made regarding the Gulf of Mexico hypoxic zone to be backed by reliable, broad-  
12 based, scientific research. We should unite with other like-minded stakeholders to form a  
13 coalition on the issue to:
  - 14 A. Coordinate a plan of action.
  - 15 B. Communicate with each other, the general public, elected officials, and members  
16 regarding the hypoxia area.
  - 17 C. Evaluate current research data and encourage further research on the hypoxic area  
18 and issues related to it.
  - 19 D. Use all means at our disposal to address the issue in a way that gives proper  
20 consideration to the impact it has on agricultural production.
- 21 9. A portion of water consumption fees collected from any user of water from a drinking water supply  
22 lake be used for payments to landowners and tenants who adopt conservation practices within the  
23 watershed of the lake.

24  
25 We oppose:

- 26 1. Using mandatory methods to address agricultural, non-point source issues related to Total  
27 Maximum Daily Loads (TMDLs) of pollutants in streams.
- 28 2. Any increased regulation on tile drainage from farm fields, including designating water flow  
29 from farm fields through or over conveyances, such as drain tile or grass waterways, as a  
30 point source of pollution under the Clean Water Act.
- 31 3. Fines, assessments, and penalties on non-point source pollutions allegedly caused by  
32 agriculture but not confirmed by sound scientific peer-reviewed data.
- 33 4. Water management programs that restrict the ability of landowners to provide effective  
34 drainage and flood control in rural and urban areas.

### 36. WATER WITHDRAWALS

35  
36  
37  
38 We believe that the ability of a landowner to reasonably use water on or beneath his property is a  
39 right to be enjoyed. This right should not be taken without due process of law. Just  
40 compensation should be given to those regions or individuals whose ability to use the water is  
41 diminished.

42  
43  
44 We believe agricultural uses must receive a high priority in the allocation of water supplies.  
45 Consideration should be given to businesses or consumers which would feel an economic impact  
46 from water restrictions.

47  
48  
49 We believe it is the duty of all users to conserve water to avoid waste of a critical natural  
50 resource. Conservation programs should encourage use of water recycling where feasible.  
51 Industry should be encouraged to use recycled effluent water produced by local municipal  
52 wastewater treatment facilities in the production process.

53

47  
48  
49  
50  
51  
52  
53  
54  
55

We support:

1. The establishment of water authorities by referendum of affected property owners, for the purpose of managing the water resource. Water authorities should be established within aquifers or recharge lines and be governed by elected or appointed directors who are resident landowners representing the various water users in the district. Regulations, developed by authorities, should be based upon the availability of supply and needs and desires of affected property owners.
2. Soil and Water Conservation Districts and Illinois Department of Agriculture (IDOA) should receive support to implement provisions of the Water Use Act to collect necessary data on water wells.
3. Water withdrawal regulations recognizing the responsibility of all users to construct and maintain proper wells. Illinois Department of Public Health regulations provide the guidelines for well construction, and should be based on facts and research data collected from scientifically valid groundwater studies.
4. Continuing research on groundwater availability, recharge and the efficient use of water resources. Such research should be designed to develop a conservation program with emphasis on individual, local and state participation.
5. Local, state, and federal appropriations to bring about groundwater research and technical assistance from state agencies to assist local water planning and management efforts.
6. The Illinois State Water Survey monitoring groundwater movement in aquifers to determine where water shortages may potentially arise.

We oppose the granting of eminent domain authority for water resource exploration.

### **37. WEED CONTROL**

We support:

1. Seeking to improve the enforcement of the Illinois Noxious Weed Law.
2. Efforts by the United States Department of Agriculture (USDA) and the Illinois Department of Agriculture (IDOA) to restrict the importation and sale of viable Niger Thistle seed.
3. Providing information to counties on the process by which weeds can be classified as noxious.
4. Seeking to improve the purity of crop and bird seed and sterilization of all weed seed included in bird seed to deter the spread of viable weed seed.
5. Working with the Farm Service Agency and other governmental agencies in developing an effective eradication program for multiflora rose.
6. The development of a control program for autumn olive and bush honeysuckle, and seek the necessary funds from the state and federal government to adequately eradicate the weed.
7. Legislation to require all governmental agencies to develop, coordinate, and implement proper management practices to control the population and spread of noxious and other weeds on all their properties.
8. Working to add Shattercane, Bull Thistle, Tall Thistle, and Poison Hemlock to the Illinois Noxious Weed List.
9. Encouraging the IDOA to notify the county boards whenever there is a change to the Illinois Noxious Weed Law and/or rules.

1  
2  
3 **38. WETLANDS**

4 We recognize that while our country has had a history of programs encouraging the conversion of  
5 wetlands to uses considered more productive, public opinion now sees significant benefits in  
6 protecting wetlands. We agree wetlands provide certain benefits and support reasonable efforts  
7 to discourage their conversion. However, this should not mean that in all instances wetland  
8 conversion is unnecessary or that private landowners should solely bear the cost of protecting  
9 wetlands. Any effort to protect wetlands should recognize the rights of private property owners  
10 and drainage districts.

11 We support:

- 12 1. A definition that requires all three benchmarks of hydric soil, hydrophytic vegetation, and  
13 standing water during a predominance of the growing season, supported by a minimum of  
14 three consecutive years of sampling data, before a wetland designation is made. Any  
15 definition should be subject to public review and legislative approval.
- 16 2. Scientific soil vegetation sampling on all lands that are to be designated a wetland. Data  
17 should be made available to the landowner and be maintained by the Natural Resource  
18 Conservation Service (NRCS) as long as that parcel continues to be designated a  
19 wetland.
- 20 3. An equitable wetland designation appeals process for landowners.
- 21 4. A mapping program, as a prerequisite to regulation, which:
  - 22 A. Accurately identifies land which has a predominance of hydric soils, hydrophytic  
23 vegetation and standing water.
  - 24 B. Has been subject to the review of locally affected landowners and operators.
  - 25 C. Has a standard interpretation from the state NRCS office which ensures equality  
26 across county lines.
- 27 5. The exemption from regulation under Section 404 of the Clean Water Act and  
28 Swampbuster of prior converted cropland and any land that has been cropped in at least  
29 six of the last ten years.
- 30 6. Compensation to property owners when their ability to make management decisions as to  
31 the best economic use of their property is restricted by laws or regulations aimed at  
32 protecting wetlands.
- 33 7. The ability for private wetland landowners to be able to mitigate wetland conversion on an  
34 acre-for-acre or value-for-value basis.
- 35 8. Compensation to local units of government which lose tax revenue due to governmental  
36 development or acquisition of wetland areas.
- 37 9. Education programs which seek to inform landowners of the benefits of wetlands and to  
38 urge voluntary conservation of wetland areas.
- 39 10. State regulatory control of wetlands programs if they are administered through the Illinois  
40 Department of Agriculture (IDOA). State regulations should be no more restrictive than  
41 federal regulations.
- 42 11. The ability to maintain existing drainage structures and tile lines without prior permits or  
43 permission.
- 44 12. The United States Department of Agriculture (USDA) NRCS being responsible for  
45 identification and regulations of all wetlands.

46  
47 We oppose the delineation of these areas as linear wetlands:

- 48 1. Man-made drainage ditches.
  - 49 2. Fence lines.
  - 50 3. Either existing waterways or land previously used for natural drainage.
- 51

### 39. WILDLIFE MANAGEMENT

We believe agriculture maintains a vital role in ensuring a safe food supply for future generations. The role of farmers in this system is to be responsible managers of the land and their business operations. In order to achieve these goals, effective wildlife management is essential.

The following basic principles are key to effectively implementing wildlife management:

1. Programs that strengthen a landowner's and operator's ability to control wildlife that cause damage on property they own or operate.
2. Educational and informational programs for landowners and operators that promote wildlife management and provide additional income opportunities.

#### Hunting and Trapping

We support:

1. Quality wildlife management based on economic, biological, and sociological practices.
  2. Hunting and trapping because we recognize their vital role in wildlife management, their economic benefit to the state and its citizens, and that they are a legitimate form of recreation that provides positive influences in our society.
  3. Streamlining the Illinois Department of Natural Resources (IDNR) licensing and permitting process to make it more efficient and beneficial for the landowner.
  4. Programs to control wildlife populations on public lands and in urban areas, including agricultural land within urban areas, where problems exist.
  5. Expanded access, with the landowner's permission, to public and private lands to allow more hunting opportunities.
  6. Efforts to extend all firearm, muzzle loading, and late winter antlerless-only deer seasons.
  7. The IDNR issuing combination permits consisting of one antlered and two antlerless deer and bonus doe-only permits to hunters to control over-population of deer and reduce health and safety concerns.
  8. Encouraging the IDNR to pursue enterprising methods, such as youth or handicap hunts, to control wildlife in areas where problems exist.
  9. The opportunity for agricultural landowner participation in the initial decision-making process to release wildlife that would have potential impact on agriculture. We also support the requirement for public notification and public hearings in the proposed release area 90 days prior to the final decision concerning this wildlife release. Landowners should have the right to stop a release on their property.
  10. Encouraging IDNR to allow landowners/tenants to purchase additional firearm deer and turkey permits without having to surrender their landowner/tenant free permits.
  11. Encouraging the IDNR to allow the harvest of both hens and toms during any turkey season in those counties where population control is necessary.
  12. The establishment of an additional fall firearm season for hen-only after the regulation turkey season is complete in those counties where population control is necessary.
  13. Legislation or administrative rule to allow landowners to assign free landowner/tenant permits for deer or turkey to family members outside of the household.
  14. The IDNR providing landowner's extra free doe permits for firearm and archery seasons.
  15. Legislation requiring the IDNR to amend the permitting process allowing for fair, non-preferential access and earlier permit acquisition (February or March) at reasonable fees to non-resident hunters. We also support requiring the IDNR to eliminate the cap on non-resident archery permits and to issue all permits allowed by law. We will aggressively pursue legislation to eliminate the cap on non-resident archery permits.
  16. The ability of landowners to lease their land for hunting. Landowners should not be required to have a minimum number of acres or be required to become an outfitter.
  17. Programs that encourage and educate youth on hunting and retain hunters in order to enhance the economic viability of agriculture.

52  
53  
54  
55

- 1 18. Eliminating the law requiring landowner(s) and immediate family members to purchase
- 2 habitat stamps to hunt on property they own or operate.
- 3 19. Legislation to allow individual members of farm partnerships and non-resident landowners
- 4 to obtain free landowner deer and turkey permits.
- 5 20. The ability of landowners to obtain a muzzleloader permit without going through the lottery
- 6 system.
- 7 21. An increase in the number of resident and non-resident firearm permits issued in each
- 8 county.
- 9 22. An increase in bag limits for the turkey season and also support an extension of the paid
- 10 permit season.
- 11 23. A year-round season for Illinois residents to hunt, trap, or dispatch resident Canada geese.
- 12 24. The removal of resident geese from protection under the Migratory Bird Treaty Act of 1916.
- 13 25. Assisting the University of Illinois Extension to develop a basic fee hunting lease
- 14 agreement.
- 15 26. Requiring that deer and turkey hunting permits be issued without charge to the lineal
- 16 descendants of an Illinois resident who owns at least 40 acres of Illinois land, provided that
- 17 the lineal descendants hunt only upon that landowner's land.
- 18 27. The late winter antlerless-only deer season shall be open in those counties with a firearm
- 19 or muzzleloader season.
- 20 28. Amending the rules for issuance of firearm deer and turkey hunting permits to allow
- 21 landowners/tenants the ability to buy a hunting permit and be eligible for the first drawing
- 22 of hunting permits
- 23 29. Continue to work with IDNR and others to monitor and fine tune the definition of outfitters,
- 24 the registration program, and the guidelines for outfitters.
- 25
- 26

#### **Nuisance Programs**

We support:

- 28 1. A wildlife nuisance permit program that embodies three elements to control nuisance
- 29 animals causing damage to crops and property. Those elements are:
- 30 A. Harvest time and management flexibility.
- 31 B. Transferability of permits.
- 32 C. Sufficient permits to reduce property damage.
- 33 2. Assisting members in utilizing the law which provides for an IDNR permit to control wildlife
- 34 where it is causing damage to crops or property.
- 35 3. The American Farm Bureau Federation in seeking landowner authority to control federally
- 36 regulated wildlife that is creating a nuisance.
- 37

#### **Assistance / Incentives for Landowners**

We support:

- 40 1. Assistance for landowners and operators in implementing management practices that
- 41 enhance wildlife populations conducive to the economic well-being of landowners and
- 42 operators. We support legislation or administrative rule changes, including those that
- 43 govern controls in urban/adjacent agricultural areas, in order to achieve these goals.
- 44 2. Incentive programs to enhance wildlife habitat, especially on environmentally-sensitive
- 45 areas.
- 46 3. Efforts to compensate landowners and operators for damage to agricultural crops,
- 47 property, and livestock arising from wildlife especially on private property near areas
- 48 managed by IDNR and the U.S. Fish and Wildlife Service (FWS) and acknowledgement by
- 49 IDNR as well as FWS in the vital role of farm owners and operators in the feeding of the
- 50 various forms of wildlife present on lands under our control. This should include
- 51 compensation to owners/operators for the value added to wildlife community present on
- 52 our lands.
- 53 4. Providing incentives to hunters through the Sportsmen for Hunger program and various
- 54 other means to help manage the doe population.
- 55

- 1 5. Serving as a source of information for landowners on how they can benefit from voluntary,  
2 fee-based programs for recreational activities on their land, how landowners can  
3 participate in these voluntary programs, what programs (such as Access Illinois Outdoors)  
4 currently exist, and further investigate other possibilities.  
5

### 6 **Trespassing**

7 We support:

- 8 1. Efforts to protect rights of farmers and farm owners with problems of trespassing or  
9 unauthorized entry by individuals and to require potential users to ask for written  
10 permission from landowners or tenants before using the land.  
11 2. Legislation that would make trespassing, when associated with deer driving, a class C  
12 misdemeanor.  
13

14 We oppose the release of elk in Illinois.  
15  
16  
17

## 18 **40. EMINENT DOMAIN**

19  
20 We will seek legislation providing:

- 21 1. That a public hearing be held before any land could be optioned or purchased by a public  
22 body for any purpose.  
23 2. That property owners' rights should be fully explained at the hearing.  
24 3. That at least 60 days prior to the hearing, the public body proposing the acquisition send  
25 written notice of its intentions to property owners whose land would be taken or damaged.  
26 4. For a cause of action and standing for nearby landowners in court cases involving eminent  
27 domain. This should allow landowners in the impacted area the opportunity to seek  
28 monetary damages when their property values are adversely affected by such  
29 acquisitions.  
30 5. The elimination of eminent domain being used to acquire property for recreational uses.  
31

32 We support:

- 33 1. Legislation to restrict the use of eminent domain to acquire property for wetlands  
34 mitigation, buffer zones, water diversion, or retention as part of a river flood management  
35 plan.  
36 2. Restricting the use of eminent domain by a public utility for the installation of pipelines and  
37 other utilities.  
38 3. Legislation in which fair market value compensation of private property taken as a part of  
39 an eminent domain proceeding receives an exemption from capital gains taxes.  
40

41 We oppose:

- 42 1. The granting of quick-take powers to economic development authorities.  
43 2. The use of eminent domain to acquire properties intended for future sale.  
44 3. The use of eminent domain in the taking of private property for the purpose of economic  
45 development by private parties.  
46 4. The use of eminent domain for the purposes of economic development when the project in  
47 question has not received approval for construction.  
48  
49  
50

## 51 **41. FARMLAND OWNERSHIP**

52  
53 The type of domestic ownership of farmland, farm facilities, or farm commodities should not  
54 infringe on the economic opportunities of the individual farmer.  
55

1 We support:

- 2 1. Insisting that all foreign investors be required to conform to all local, state and federal tax
- 3 laws.
- 4 2. Continuing to monitor the effect of foreign investment in agriculture, food distribution,
- 5 banking, insurance and other businesses in the United States.
- 6 3. The continuation of programs to require the reporting of foreign ownership of farmland in
- 7 the United States.
- 8 4. State and national programs and policies which encourage and facilitate the ownership of
- 9 farmland by farmers and those directly involved with the practice of farming.
- 10 5. Continuing to monitor the effects of the entry of non-agricultural entities into farming or
- 11 farm ownership.

12  
13 We oppose preferential tax treatment of foreign investments in agricultural land under federal tax  
14 law or treaty provisions.  
15  
16  
17

## 18 **42. GOVERNMENTAL PROPERTY ACQUISITION AND OWNERSHIP**

19  
20 We support legislation:

- 21 1. Preventing any involuntary net loss of private property ownership in any state. All future
- 22 forced acquisition or sanctioning of property by federal, state, or local government
- 23 agencies except by universities for agricultural research must be balanced by
- 24 disbursement or sales of property of equivalent value from government inventories within
- 25 the state.
- 26 2. To prohibit additional purchases of real estate for recreational or preservation purposes by
- 27 any level of government unless the property remains on local tax rolls at the prevailing tax
- 28 rates and prevailing assessed value of similar local properties.
- 29 3. Providing for a method of compensating units of local government by the state or federal
- 30 government where the amount of land taken by the state or federal government severely
- 31 reduces property tax revenues or where the demand for local services related to the state
- 32 or federal-owned or managed property is substantially increased.
- 33 4. Requiring governmental units maintaining highways, parks or other areas which increase
- 34 road use or require added police or fire protection or other emergency services to
- 35 compensate the appropriate local bodies maintaining those roads or providing such
- 36 services.
- 37 5. Providing for a hearing and a referendum of registered voters in the county or counties in
- 38 which land is sought by a local governmental unit for recreational, forest or conservation
- 39 purposes. Existing public lands should be developed for the purpose for which it was
- 40 purchased before additional property is acquired.
- 41 6. Providing that agricultural land owned by local governmental units may be rented for
- 42 agricultural purposes until developed.
- 43 7. To ensure that those government-owned lands, which are commercially farmed and
- 44 produce a cash crop, should not be farmed by government, but instead are leased to
- 45 farmers with the exception of those used for agricultural research.
- 46 8. Requiring the governmental unit to offer land for resale to the previous owner or their heirs
- 47 at the lower of the original purchase price or current market value if the property acquired
- 48 by an agency will not be used for the original purpose for which it was acquired or to
- 49 adjacent landowners if the original landowner or their heirs do not exercise the right to
- 50 purchase. If the original or adjacent landowner does not exercise the right to purchase
- 51 within one year of the offer to sell, then the governmental unit should be allowed to sell
- 52 such property to other interested parties. We support a sunset time limit of ten years for
- 53 the property to be used as intended or the buy-back provisions go into effect.
- 54
- 55

- 1 9. Providing that on land owned by the State or local taxing authority where benefits from  
2 barter or income are received from such land, a portion of this income or exchange will be  
3 returned to the county in which the land is located in lieu of taxes.
- 4 10. Requiring units of government acquiring railroad right-of-way property (i.e. for trails) to  
5 follow the same provisions for fencing and farm crossings as the railroad was required to  
6 follow.
- 7 11. Requiring public bodies making acquisition of property for public purposes to make  
8 financial settlement within 60 days of the date that the purchase price is determined or be  
9 required to pay the property owner the prime interest rate plus 2 percent interest per year  
10 on the purchase price until final settlement is made.
- 11 12. To limit state and federal agencies in their purchase of additional recreational or wildlife  
12 habitat until existing sites, other than farmland, are developed and maintained for the  
13 purpose for which they were intended.
- 14 13. That would require governmental agencies to document the impact on agriculture of any  
15 infrastructure projects, show whether that impact is justified, and if so take all reasonable  
16 steps to reduce or eliminate any negative impact.
- 17 14. That clearly defines scenic easements, establishes parameters on the use of such  
18 easements, and restricts the ability of the government to use federal highway funds to  
19 purchase scenic easements.

20  
21 We oppose:

- 22 1. Any effort to establish buffer areas around parks, preserves, or other areas being  
23 protected for their environmental or ecological value without just compensation to affected  
24 landowners.
- 25 2. The formation of any state or federal wildlife refuges, recreational or conservation areas  
26 until such time as the boundaries of such projects are clearly defined and the property  
27 targeted for acquisition is clearly identified.
- 28 3. The creation or expansion of local, state, and federal refuges, recreational or conservation  
29 areas when the aggregate acreage of such proposed focus areas account for more than  
30 two percent of the county's farmland.
- 31 4. The formation of state or national wildlife refuges, recreation, or conservation areas that  
32 impede the existing natural and artificial drainage systems of landowners in the  
33 watershed.
- 34 5. The continued encroachment of federal and state agencies and local governments on  
35 agricultural and forest lands.
- 36 6. The closing of Illinois State parks and state historic sites since they are valuable assets for  
37 the social and economic survival of rural Illinois.

38  
39 We will work with state and federal agencies to allow the farming of lands acquired under the  
40 Open Lands Trust or other federal or state grant programs. Applications for Open Lands Trust  
41 funds to be used for wetlands or riparian areas must include a mosquito abatement and  
42 management plan. The timetable for development of the land acquired through such grant  
43 programs shall be established by the unit of local government, but is not to exceed ten years.

44  
45 We encourage public universities to utilize more equitable and risk-sharing adjustable rate leases  
46 rather than a competitive bidding cash rent lease process on university-owned farmland. All  
47 lessees of Illinois farmland controlled by public Illinois universities shall be Illinois based farmers.

48  
49 When evaluating farm lease policies on farmland owned by the University of Illinois and other  
50 public universities, the long term land stewardship commitments, the full potential local effects on  
51 rural communities and their economies, and future university relations with possible land donors  
52 should be considered in addition to the immediate economic benefits for the universities.

53  
54  
55

1 When determining farmland lease policies, the public institutions should consider taking the  
2 opportunity to use best management practices on the universities' owned farmland consistent  
3 with the information being provided through the University of Illinois Extension Service.  
4  
5  
6

#### 7 **43. HERITAGE AREAS AND CORRIDORS**

8  
9 We oppose heritage areas and corridors, heritage rivers, scenic byways, and any other such  
10 federal or state programs that:

- 11 1. Have regulatory authority.
- 12 2. Have the power of eminent domain.
- 13 3. Are involuntary.
- 14 4. Are not grassroots, consensus-based programs that actively involve agricultural interests  
15 in their creation, development, and execution.
- 16 5. Do not provide a means for a private property owner, a county, or other state or municipal  
17 authority to opt out of the program.  
18  
19  
20

#### 21 **44. LAND USE AND FARMLAND PRESERVATION**

##### 22 **Municipal Annexation**

23  
24 We support:

- 25 1. Legislation requiring notification of landowners by the petitioners via certified mail at least  
26 90 days prior to any formal petition to incorporate their land into a municipality as defined  
27 in Illinois Statutes.
- 28 2. Legislation that allows only the landowners in a territory being considered for annexation  
29 to be allowed to sign and submit a written petition to the corporate authorities.
- 30 3. Efforts to reduce the impacts of municipal annexation on agriculture by reducing to 10  
31 acres the size of the parcel that may be forcibly annexed, and/or establishing a fixed  
32 minimum period of time during which agricultural practices may continue.  
33

34 We oppose:

- 35 1. Strip and excessive annexation by municipalities.
- 36 2. Non-contiguous annexation agreements and the ability of municipalities to apply their  
37 ordinances to parcels that have not been annexed.  
38

39 Whenever the governing body of any municipality has adopted a resolution to annex any  
40 unincorporated area of land, such municipality shall, before proceeding, present at a public  
41 hearing the following information:

- 42 1. A map and description of the area to be annexed.
- 43 2. Evidence that such annexation is reasonable and necessary to the proper development of  
44 the municipality.
- 45 3. Evidence of the ability to furnish normal municipal services to the unincorporated area at  
46 the time of annexation.  
47

##### 48 **Farmland Preservation**

49 While protecting the constitutional rights of landowners, we support:

- 50 1. Legislation to broaden the legal basis for farmland preservation approaches and efforts to  
51 implement and utilize the following farmland preservation tools:
  - 52 A. Purchase of Agricultural Conservation Easements (PACE) to be implemented at  
53 the state, county, or local levels or in collaborative arrangements between entities.  
54  
55

- 1 B. Transfer of Development Rights (TDR) to be supported and implemented at the
- 2 state, county, or local levels.
- 3 C. Growth Management Laws including limited annexation rights for municipalities
- 4 where prime agricultural land is involved and agricultural protection zones based
- 5 on referendum secured from encroachment of conversion.
- 6 D. Mitigation standards requiring that conversion of farmland to a non-farm use be
- 7 considered only if an equal amount of equal quality land is protected by an
- 8 agricultural conservation easement.
- 9 2. Efforts to encourage preservation of appropriate lands for agriculture and open space
- 10 uses through land use programs which include:
- 11 A. A policy statement by all counties to:
- 12 (1) Preserve Class I and II farmland as defined by the Natural Resources
- 13 Conservation Service.
- 14 (2) Conserve Class III and IV farmland
- 15 (3) Protect all classes of farmland from indiscriminate conversion to non-farm
- 16 use.
- 17 B. Establishment of a review process with local involvement prior to acquisition of real
- 18 property by public agencies for public uses.
- 19 C. Identification of the various classes of farmland in all counties.
- 20 D. Identification of land in each county appropriate for development because of class,
- 21 size or location.
- 22 E. The concept of agricultural areas as found in the Illinois Agricultural Areas
- 23 Conservation and Protection Act. We will take a strong leadership role in
- 24 strengthening the Act to ensure that it becomes an effective farmland preservation
- 25 tool.
- 26 3. Requiring consideration of the impact on agriculture and the local tax base and the desires
- 27 of local voters in proposals to take agricultural lands for any public use.
- 28 4. Encouraging counties and municipalities to implement boundary and land use agreements
- 29 that protect farmland. Boundary agreements should not be used as a tool in lieu of the
- 30 purchase of development rights.
- 31 5. Seeking legislation that limits the term of county/municipal boundary agreements to five
- 32 years in length and subjects such agreements to public notice and public hearing.
- 33 6. Maintaining involvement in reviewing federal, state and local proposals to convert
- 34 farmland to non-farm purposes.
- 35 7. Monitoring actions by state agencies regarding implementation of the Farmland Protection
- 36 Act.
- 37 8. Working with major urban interests to develop policies and programs which will encourage
- 38 compact cities and discourage conversion of farmland. We support the concept of cluster
- 39 development if the remaining property in the original parcel of property will be preserved
- 40 for agricultural or conservation purposes.
- 41 9. Cooperating with other organizations on farmland preservation issues.
- 42 10. Encouraging municipalities to explore all possible avenues to redevelop areas within their
- 43 borders before annexing farmland.
- 44 11. The consideration of impacts on farmland in the development of Environmental Impact
- 45 Statements as being as significant as the impacts to other environmentally sensitive areas
- 46 (i.e., historical sites, wildlife/waterfowl refuges, and publicly owned parks and recreational
- 47 areas). We will work with state and federal agencies to develop an Environmental Impact
- 48 Statement methodology that increases the contributory value of farmland to the public
- 49 good.
- 50 12. Legislation authorizing a graduated conversion fee program for agricultural land that is
- 51 converted to non-agricultural use based on the parcel's Land Evaluation score. The
- 52 collected fees would support local PACE programs.
- 53
- 54
- 55

1 We oppose the use of condemnation by governmental bodies to acquire farmland for farmland  
2 preservation.  
3

4 The federal government should assist in funding the purchase of agricultural conservation  
5 easements for agricultural purposes from willing sellers as a means of preserving farmland  
6 without intruding on private property rights. Information about federal, state, local, and private  
7 efforts to acquire private property using tax money should be catalogued and publicized through a  
8 state-level clearinghouse.  
9

### 10 **Planning & Zoning**

11 We support:

- 12 1. Requiring members of a county zoning Board of Appeals to reside within the area covered  
13 by the county zoning ordinance.
- 14 2. Making it mandatory that County Boards require zoning Boards of Appeal to read and  
15 include the report of the Soil and Water Conservation District concerning all zoning  
16 applications in the hearing and in the report on the application which is made to the  
17 County Board.
- 18 3. Basing the extent of the municipality's extraterritorial jurisdiction (ETJ) and zoning  
19 capability outside its boundaries on the population of the municipality. The smaller the  
20 municipality, the smaller its reach of ETJ and authority should be. No ETJ and  
21 municipality's zoning authority should extend beyond 1 1/2 miles.
- 22 4. Limiting the ETJ and zoning capabilities of a municipality to either a municipality's utility  
23 boundary or corporate limits, whichever lies closer to the city core.
- 24 5. Removing the veto power of municipalities over proposed agricultural areas within their  
25 1 1/2 mile jurisdiction.
- 26 6. Assisting counties and municipalities in considering adoption of zoning.
- 27 7. Assisting counties and municipalities in considering the adoption of a comprehensive land  
28 use plan.
- 29 8. Encouraging zoned counties to design and implement land use and zoning techniques to  
30 protect the integrity of agricultural practices including the option of strict agricultural  
31 protection zones.
- 32 9. Establishing reverse setbacks, comparable to those in the Livestock Management  
33 Facilities Act, for new rural residences built near established livestock facilities.
- 34 10. Ensuring local land use administrators have the resources necessary to properly develop  
35 and implement land use plans which accommodate production agriculture and ensure the  
36 effective and efficient administration of the plan.
- 37 11. Incorporating the use of a Land Evaluation and Site Assessment (LESA) system in  
38 evaluating the suitability of land for agriculture/development.
- 39 12. Incorporating the principles of the Land Use Evolution and Impact Assessment Model  
40 (LEAM) and encourage its use in planning efforts.
- 41 13. Developing legislation giving counties protest rights over municipal zoning and planning  
42 proposals within the unincorporated area of a county, thus requiring a municipality to have  
43 a supermajority vote.
- 44 14. Requiring municipalities to have at least one voting representative from the 1 1/2 mile  
45 extraterritorial jurisdiction (ETJ) on their planning commission with the possibility of  
46 additional representatives from the ETJ based on the population of the municipality.
- 47 15. Maintaining active involvement in county planning and zoning and in the establishment of  
48 agricultural areas as tools to guide development and limit farmland conversion.
- 49 16. Encouraging the State of Illinois to develop a statewide zoning model that can be used by  
50 county boards and municipal corporate authorities in adopting and amending zoning  
51 ordinances that accommodate agriculture and agricultural tourism. Such a model should  
52 account for current agricultural-related federal and state laws and regulations.  
53  
54  
55

- 1 17. The provisions of the Local Legacy Act and the Local Planning Technical Assistance Act  
2 and work to secure state funding for them by reallocations within the Department of  
3 Commerce and Economic Development.
- 4 18. Supporting legislation that would exempt agriculture from zoning imposed by  
5 municipalities within the extraterritorial area outside municipal boundaries.
- 6 19. Encouraging county Farm Bureaus to develop relationships with local zoning boards to  
7 allow an exchange of information on proposed zoning changes that will impact agriculture  
8 on the county level.
- 9 20. Seeking legislation requiring 30 days advanced written notification of all landowners and  
10 governmental entities whose property or district boundary is within 1 1/2 miles of any  
11 parcel in an unincorporated area for which a zoning change is proposed or on which a  
12 special use permit is sought. If a petition of protest from 20 percent of those landowners  
13 or a written notice from that governing board opposing the change or permit is presented,  
14 the amendment shall not be passed nor the special permit issued except by the favorable  
15 vote of 3/4 of all the members of the county board. Landowners also need to be given 30  
16 days written advance notice of any new or proposed changes to municipal future planning  
17 area or land use.
- 18 21. Seeking legislation that strengthens the Illinois Counties Code to limit the arranging of “by-  
19 right” lots between a proposed rural subdivision and neighboring property owners in a  
20 manner intended to extinguish the neighbors’ protest rights.
- 21 22. Encouraging townships with planning commissions to have township government  
22 approved land use plans or goals with corresponding policies that reflect a consensus of  
23 the townships’ residents. These plans, goals, and policies should be used as a basis for  
24 recommendations to the county board.

**Other**

We support:

- 28 1. Working with units of local government to enact “Right to Farm” ordinances or resolutions.
- 29 2. Efforts to disclose to potential buyers of rural residential property those conditions  
30 associated with living in an agricultural or rural area. These efforts should include state  
31 legislation linking such notice to the Residential Real Property Disclosure Act.
- 32 3. Encouraging county Farm Bureaus to distribute The Code of Country Living to potential  
33 new residents of rural areas so that they better understand rural living.
- 34 4. Seeking changes in the process of development of Greenway Plans or other related  
35 Illinois Department of Natural Resources plans.
  - 36 A. Where proposed passive or active greenways are targeted, the landowners should  
37 have direct input on the creation of the plan.
  - 38 B. Before their county board votes on a plan, the board should be given sufficient time  
39 to study the plan and get input from citizens of the county.
  - 40 C. If a county board has approved a plan, there should be the option the county can  
41 withdraw from the plan in the future.
  - 42 D. If a plan is developed, it should include provisions to ensure that greenways remain  
43 voluntary.

**45. PRIVATE PROPERTY RIGHTS**

We believe in the sanctity of private property and individual rights as provided by the U.S. Constitution, as the basis of American freedom and progress. Private property should be defined to include all land, timber or other valuable considerations associated with land ownership.

- 1 We support:
- 2 1. Developing and seeking legislation defining how private property rights are impacted by
  - 3 government regulations and takings. Such legislation should provide for compensation to
  - 4 affected property owners for a total or reasonably measurable partial loss of use of
  - 5 property resulting from governmental regulations and takings including expanded setback
  - 6 requirements.
  - 7 2. Efforts to assist landowners when the rightful ownership of land is questioned by an
  - 8 organized group outside the control of the state in which the land was originally deeded.
  - 9 This assistance should include legal and financial assistance from the State of Illinois.
  - 10 3. Allowing landowners to select who does the field tile repairs, at the cost of the utility
  - 11 company or government entity, on their land when private or public projects go through
  - 12 and damage their tile lines.
  - 13 4. Legislation reforming Illinois law on the partition of property owned by heirs to provide due
  - 14 process protections like the Uniform Partition of Heirs Property Act.
  - 15 5. The requirement that an individual must indicate how they are directly impacted by an issue
  - 16 when filing public comments on legislation, regulation, or related rules, to the county, to the
  - 17 State of Illinois, the U.S. Government, and/or their agencies.

- 18
- 19 We oppose:
- 20 1. Any effort to take away or transfer the right of a landowner to grant or deny easements
  - 21 especially on land where easements have previously been given for other purposes.
  - 22 2. Legislation allowing the public access to private property without the consent of the
  - 23 property owner.
- 24
- 25
- 26

## 27 **46. AGRICULTURAL COOPERATIVES**

- 28
- 29 We support:
- 30 1. Voluntary participation in cooperative marketing to better serve Illinois Agricultural
  - 31 Association and county Farm Bureau members, study and develop successful marketing
  - 32 programs consistent with good business practices and encourage affiliates to follow these
  - 33 guidelines.
  - 34 2. Encouraging and assisting cooperatives to expand member information and involvement
  - 35 programs.
  - 36 3. Encouraging all agricultural cooperatives to have an aggressive revolving stock
  - 37 redemption policy.
  - 38 4. Evaluating processing or further integration into the marketing of farm products as a
  - 39 means of increasing members' income.
  - 40 5. Encouraging co-ops to play a larger role in the meat industry by building or acquiring
  - 41 packing house/processing cooperatives.
  - 42 6. Encouraging cooperatives to resist entry into production agriculture that would directly
  - 43 compete with cooperative farmers.
  - 44 7. Encouraging farmers, when direct competition in production agriculture is involved, to
  - 45 resolve disputes through their cooperative boards (including discontinuation of enterprises
  - 46 that compete with the individual stockholder). In the event voluntary efforts are
  - 47 unsuccessful to provide resolution to these competitive issues, we will seek avenues to
  - 48 equitably resolve disputes between cooperatives and their shareholders/members when
  - 49 the issue is whether the cooperative is directly competing with any shareholder/member in
  - 50 production agriculture activities. Such avenues may include arbitration or mediation.
- 51
- 52
- 53
- 54
- 55

- 1 A. The following competition guidelines should be addressed:
- 2 (1) Competition could exist between a cooperative and its members if:
- 3 a) A cooperative purchases or rents ground for the sole purpose of
- 4 producing agricultural commodities.
- 5 b) A cooperative engages in custom farming service.
- 6 c) A cooperative owns livestock or grows out livestock owned by
- 7 others.
- 8 (2) If a cooperative member decides to enter a venture in competition with the
- 9 cooperative he/she does not have cause to find fault if the cooperative was
- 10 already engaged in that activity.
- 11 (3) Competitive production activities should not include seed sales, grain
- 12 trucking, the application of plant health products such as fertilizer, lime and
- 13 crop protection products (e.g. pesticides).
- 14 B. The following guidelines of remedy should be considered:
- 15 (1) Member must make a written request to the cooperative that it cease
- 16 production activity.
- 17 (2) The cooperative shall have a specific period of time to resolve the dispute.
- 18 (3) If the dispute cannot be resolved with the cooperative board, the member
- 19 may seek to be released from the cooperative. Upon release, the member
- 20 shall receive the retained earnings allocated plus any outstanding stock,
- 21 patronage or otherwise, which is held by the member seeking release. The
- 22 only earnings considered are those on the books of the cooperative that are
- 23 specifically credited to the account of the named member/patron.
- 24 (4) The cooperative may refuse services to released members and/or require
- 25 them to reinvest to obtain future services.
- 26 (5) Provisions should be made to allow members to legally waive their rights of
- 27 redemption and release.
- 28 8. Promoting ongoing personal contact between state and county Farm Bureaus and local
- 29 cooperatives to raise issues and to resolve problems.
- 30 9. A federated cooperative structure whereby the regional cooperative continues to assist
- 31 local cooperatives in serving their farmer members.
- 32
- 33
- 34

**47. AGRICULTURAL RESEARCH**

We support:

- 38 1. The meaningful involvement of food and agriculture stakeholders in priority setting,
- 39 funding, and accountability for federal and state food and agricultural research, extension,
- 40 and education programs.
- 41 2. Determining the need and financing necessary to provide appropriate incentives for
- 42 building and maintaining a critical mass of well-trained scientists in the public sector to
- 43 support and ensure that the U.S. remains the leader in global agricultural production.
- 44 3. A national council with an emphasis on food and agricultural research.
- 45 4. Research funding efforts for the Illinois Council for Food and Agricultural Research (C-
- 46 FAR).
- 47 5. Redesigning the system of research farms and other pilot scale research facilities to
- 48 assure that new information and technologies generated in public and/or private efforts
- 49 around the world are rapidly selected for and adapted to Illinois conditions.
- 50 6. Awarding some federal special grants on a competitive basis that address high-priority
- 51 objectives identified by stakeholders and requiring large-scale, well-coordinated efforts by
- 52 federal and state institutions and agencies working in cooperation with food and agriculture
- 53 organizations and firms.
- 54
- 55

- 1 7. Annual increases in the federal investment in public food and agriculture research,  
2 extension, and education programs to adjust for inflation in costs.
- 3 8. Federal investment in research that provides a mix of formula, competitive, and special  
4 grants.
- 5 9. Continued federal funding for Cooperative State Research, Extension and Education  
6 Service (CSREES) programs to support but be limited to the broad scope of research,  
7 extension, and education programs that reflect activities in the U.S. food and agriculture  
8 sector. Research, extension, and education programs should be tailored to the unique  
9 situations of regions, states, and locales. We support the use of both federal and state  
10 funds to support basic, developmental, and adaptive research and technology transfer.
- 11 10. Allocation of funds based upon scholarship and quality of science in determining who  
12 should receive funds to carry out federal, state, and local research, extension, and  
13 education programs.
- 14 11. A major personnel building effort in Illinois to restore and improve its public institutional  
15 capacity for food and agriculture research, extension, and education.
- 16 12. A major capital program in Illinois to provide modern facilities and equipment for its food  
17 and agriculture research, extension, and teaching programs.
- 18 13. The integration of research, extension, and education programs to ensure an effective and  
19 efficient transfer of knowledge and technology to farmers.
- 20 14. Funding for the Plant Genome Research Project.
- 21 15. Reauthorization of the competitive research facilities program for land grant universities.
- 22 16. Maintaining viable, competitive regional agriculture research centers.
- 23 17. Securing foreign investment in U.S. agriculture research where foreign countries stand to  
24 benefit from the outcomes derived from such research.
- 25 18. Programs to educate consumers about the necessity of research and its integral position  
26 in the creation of a long-term, competitive, desirable agricultural growth industry.
- 27 19. Land grant colleges keeping research facilities in the public sector.
- 28 20. An increase of research dollars in the public and private sector dedicated to the  
29 development of new domestic uses of agricultural products and commodities.
- 30 21. Production research on efficient nutrient uptake, water quality and usage, and improved  
31 pest and disease resistance for crops and livestock.
- 32 22. An increased role for the Illinois Nutrient Research and Education Council (NREC) in  
33 reaching the 25% phosphorus reduction goal stated in the Illinois Environmental Protection  
34 Agency (IEPA) nutrient reduction strategy. We advocate facilitating this activity by  
35 restructuring the NREC research committee to include a representative from the southern  
36 region of the Illinois Wheat Association and a farmer producer from the southern region  
37 appointed by Illinois Farm Bureau. This enables input from parties familiar with conditions  
38 and opportunities in the priority phosphorus watersheds.

#### 48. AGRICULTURAL TOURISM

44 We recognize that agricultural tourism serves as an important marketing strategy and also helps  
45 to educate the public about where and how food and farm products are grown.

46  
47 We support:

- 48 1. Recognizing agricultural tourism as an economic development tool for rural areas and  
49 support public policy that encourages the growth of agricultural tourism.
  - 50 2. Continuing to build a working relationship between agricultural tourism operations, state  
51 agencies, and other associations.
  - 52 3. Encouraging the development and implementation of a statewide strategic plan for  
53 agricultural tourism with industry input and support.
- 54  
55

- 1 4. Promoting collaborative projects to raise the awareness of the importance of agricultural  
2 tourism to the state's economy and expand growth opportunities in agricultural tourism for  
3 Illinois farms including maintenance of appropriate existing databases and websites.
- 4 5. Encouraging the insurance industry to offer insurance policies for agricultural tourism  
5 farms that provide farm owners with coverage for nuisance lawsuits, property damage, and  
6 liability, including liability for injuries to visitors invited to the farm.
- 7
- 8
- 9

#### 10 **49. ANIMAL AGRICULTURE**

11  
12 We will aggressively work to encourage growth and enhancement of the livestock industry in  
13 Illinois.

14  
15 We support:

- 16 1. Seeking legislation to preempt anticipatory nuisance claims against owners of proposed  
17 livestock facilities or expansions to existing facilities, provided that such facilities are in  
18 compliance with statutory and regulatory requirements and the construction or expansion  
19 of the facility has been approved by the Illinois Department of Agriculture (IDOA) under the  
20 Livestock Management Facilities Act (LMFA).
- 21 2. Encouraging the IDOA to cease interpretation of cases or specific situations as "inherent in  
22 the law" when no documented or otherwise noted explanation can be found in the LMFA  
23 (especially with using this language to explain that any expansion leads to the requirement  
24 of construction of a storage facility).
- 25 3. Encouraging all agencies involved with livestock facilities management jurisdiction to  
26 interact and cooperate so as to develop greater consistency, uniformity, and practicality in  
27 rules and regulations.
- 28 4. The care of livestock through accepted management practices which will provide for better  
29 health and safety for the livestock while maintaining acceptable production levels.
- 30 5. The research and development of approved alternatives to livestock rendering including  
31 incineration, composting systems, and approved burial methods.
- 32 6. Encouraging farmer participation and adoption of quality assurance programs.
- 33 7. Informing the general public and the food industry concerning livestock handling  
34 procedures which complement accepted livestock management practices, and we will be  
35 involved in the development of any standards.
- 36 8. IDOA being the entity which shall administer the laws and regulations regarding the care of  
37 livestock and companion animals.
- 38 9. Participating in supply chain coalitions to proactively address issues threatening the future  
39 viability of the livestock industry.
- 40 10. The use of signage notifying employees that the use of unauthorized audio, photographic,  
41 and video devices of any kind are prohibited in the workplace. Educational programs on  
42 employee-employer relationships and issues should be offered to members.
- 43 11. Establishing a more aggressive and visible role in monitoring animal activists' activities,  
44 such as identifying sources of funding, legislative initiatives, and membership enrollment.  
45 We will work with these groups as needed to ensure complete and accurate public  
46 statements about animal agriculture.
- 47 12. Counter efforts against the livestock industry by continuing to develop a public relations  
48 and public information strategy in cooperation with other agricultural interests to provide  
49 accurate information to the media concerning animal agriculture.
- 50 13. Enforcement of the laws which protect animal production and continue to support criminal  
51 penalties for trespassing and damage that disrupts livestock production and/or research  
52 facilities.
- 53 14. Providing information in conjunction with the county Farm Bureaus to the media and the  
54 public about the importance of the livestock industry. Assistance should also be provided  
55

- 1 to individual farmers to help them to deal with the public relations challenges faced by the
- 2 livestock industry.
- 3 15. Encouraging livestock exhibitors to only use practices based on responsible animal
- 4 husbandry. Livestock exhibitors should continue to be educated with regard to what
- 5 constitutes responsible, ethical, and accepted animal welfare practices, as they relate to
- 6 the competitive exhibition of livestock.
- 7 16. Encouraging livestock show officials to enforce the "Code of Ethics" and penalize violators
- 8 appropriately.
- 9 17. Seeking amendments to the Humane Care for Animals Act and the Illinois Administrative
- 10 Code that limit the authority of approved volunteer animal investigators that are contracted
- 11 through the county Humane Societies, to companion animals only, and make those
- 12 investigators primarily responsible to the IDOA.
- 13

14 We oppose federal, state, or local legislation and regulations that are promoted in the name of  
 15 "humane" treatment in situations where science shows those regulations would, in actual  
 16 practice, adversely affect the health, longevity, or productivity of livestock and the economic  
 17 viability of the operation.

18  
 19  
 20

## 50. ANIMAL HEALTH AND IDENTIFICATION

21  
 22

23 We support:

- 24 1. State and federal disease eradication programs for livestock, and research designed to
- 25 develop and utilize swift and accurate tests to diagnose these diseases.
- 26 2. The quarantine of animals from herds and flocks known to be infected with reportable
- 27 diseases and the destruction of animals which are infected with zoonoses which may enter
- 28 the human food chain.
- 29 3. U.S. Department of Agriculture (USDA) assistance for farmers with infected herds and
- 30 flocks to develop an approved plan to clean up or depopulate their herds and flocks within
- 31 a reasonable period of time.
- 32 4. Federal legislation, regulations or programs which will:
  - 33 A. Encourage greater uniformity and reciprocity among states for the health
  - 34 requirements necessary for interstate transportation of livestock.
  - 35 B. Provide, at the state and federal levels, a voluntary management program for
  - 36 Johne's Disease.
  - 37 C. Encourage beef, dairy, goat, sheep, and cervid farmers to test their animals for
  - 38 *Mycobacterium paratuberculosis*, the causative organism for Johne's Disease.
  - 39 D. Encourage cooperation between livestock farmers and the Animal and Plant Health
  - 40 Inspection Service in identifying animals from herds originating from nations which
  - 41 have confirmed cases of Bovine Spongiform Encephalopathy (BSE).
  - 42 E. Provide for regionalization by Animal and Plant Health Inspection Service (APHIS)
  - 43 to modernize animal movement regulations.
  - 44 F. Work with stakeholders to develop a process which provides assurance among
  - 45 livestock producers, veterinarians, and packers which will allow for the timely
  - 46 marketing of animals from herds that have been infected with a non-reportable
  - 47 disease, yet are deemed safe to travel, will not spread the disease, and will not
  - 48 negatively impact the food supply.
  - 49 G. Allow farmer/owner consumption of fallen stock.
  - 50 H. Allow slaughter of injured stock at either a federal inspected packing house or a
  - 51 state inspected local slaughter plant to be used for human consumption.
- 52 5. Implementation of an animal disease traceability program that:
  - 53 A. Does not create a burdensome cost to livestock farmers.
  - 54 B. Encourages uniformity between states.
  - 55

- 1 C. Can quickly and accurately trace an animal in the event of a disease outbreak.
- 2 D. Initially uses minimal standards for identification and tracking.
- 3 E. Meets the expectations of foreign governments and our customers overseas.
- 4 F. Places a high priority on ensuring the U.S. reputation as a reliable supplier of meat
- 5 to foreign markets.
- 6 G. Uses low-cost tags and a "bookend" approach (the times an animal enters
- 7 commerce and harvest) to track an animal's movements and allows for the
- 8 replacement of lost tags.
- 9 H. Allows for private sector incentives and disincentives for livestock that are uniquely
- 10 identified.
- 11 I. Requires all exhibition livestock in Illinois to have a unique identification number
- 12 (appropriate for each species) and premises number before allowing the animal to
- 13 show.
- 14 6. Encouraging the Illinois Department of Agriculture to appoint a food animal practitioner to
- 15 the position of Illinois State Veterinarian.
- 16 7. Encouraging USDA's Animal Plant Health Inspection Service (APHIS) to make any
- 17 announcements related to BSE testing after the markets have closed.
- 18 8. Encouraging the use of electronic animal health papers with the ability to include actual
- 19 digital photos of the animal for relevant species.
- 20 9. Encouraging producers to take advantage of educational opportunities regarding biological
- 21 risk management (BRM), and implement these procedures in their operations.
- 22
- 23
- 24

## 25 51. APICULTURE

26  
27 We support and encourage legislation or administrative rules for Illinois beekeepers, regarding  
28 the harvesting and marketing of honey, that are no more stringent than those of neighboring  
29 states.  
30

## 31 52. BIOSECURITY

32 We support:

- 33 1. Department of Homeland Security (DHS) placing agricultural screening and inspections as
- 34 a high priority with its Customs and Border Patrol officers.
- 35 2. State and federal legislation to establish an indemnity program and contract relief when
- 36 acts of terrorism result in losses in production and/or marketability of agricultural products.
- 37 3. Import and export protocols that prevent the introduction of foreign animal and plant
- 38 diseases.
- 39 4. The concept of looking at animal health issues beyond our own borders and examining
- 40 them as "North American" issues.
- 41 5. Educational programs for farmers that will assist them in the early identification, treatment,
- 42 and required reporting of animal and plant diseases.
- 43 6. The testing and development of crops that are resistant to diseases not currently present
- 44 in the United States. The research should be conducted in non-sensitive areas so that the
- 45 spread of diseases would not cause any loss of value to U.S. agricultural production.
- 46 7. Continuing to work with state agencies such as the Illinois Environmental Protection
- 47 Agency, Illinois Department of Public Health, and Illinois Department of Agriculture to
- 48 establish and implement uniform biosecurity protocol for all personnel to follow that is
- 49 consistent with scientific biosecurity guidelines.
- 50
- 51
- 52
- 53
- 54
- 55

## 53. BIOTECHNOLOGY

We will actively encourage and educate farmers to be good stewards of biotechnology in order to maintain the integrity and image of the U.S. food and grain supply, ensure technology remains effective through regulatory compliance, and preserve opportunities for future biotech products and processes.

We support:

1. Increased efforts through biotechnology to more rapidly develop traits which have recognized consumer benefits in order to:
  - A. Increase the marketability of our products.
  - B. Enhance the environment.
  - C. Increase net farm income.
  - D. Improve product quality.
  - E. Enhance U.S. agriculture's competitiveness in the world market.
  - F. Ensure worldwide consumers of stable, ample, safe, and nutritious U.S. products.
2. The coordinated analysis of biotechnology products by United States Department of Agriculture (USDA), Food and Drug Administration (FDA), and Environmental Protection Agency (EPA) before they are approved for domestic use and commercialization.
3. Utilizing science, including unbiased research such as feeding trials, on the development and use of biotechnology enhanced products.
4. Ongoing monitoring of the process of biotechnology product research and approval.
5. Increased efforts to educate the public worldwide regarding the safety and benefits of products developed through biotechnology.
6. Maintenance of U.S. export markets by securing foreign regulatory acceptance of biotechnology products, including the following priorities:
  - A. Manufacturers of biotechnology enhanced products must assume major responsibility for this acceptance.
  - B. Companies offering biotechnology enhanced products for commercialization in the U.S. must first have approval for most major uses and markets, domestic and international.
  - C. Companies must provide adequate and accurate information on acceptable markets and market restrictions in writing to farmers prior to purchase of the original input product.
  - D. An ongoing, written reporting system should be maintained for informing farmers what markets do not accept or might be adversely affected by currently unapproved varieties.
  - E. Responsible production, marketing, and delivery of agricultural products by those growing varieties not approved for all major uses in all major markets.
7. Global commercialization and production of biotechnology-enhanced crops provided that U.S. farmers are not disadvantaged by business practices compared to our foreign competitors, and continued monitoring and reporting of biotechnology fees in the U.S. and other countries.
8. Seed tags on packages of agricultural seed stock that clearly indicate the varietal (and genetic) purity of seed contained therein. We will also support legislation which allows farmers to recover all damages in those instances where the seed does not conform to the genetic purity indicated on the seed tag.
9. New or enhanced marketing methods for biotech and non-biotech seeds provided that they do not restrict market options and offer farmers:
  - A. Improved cropping options.
  - B. More cost-effective inputs.
  - C. Better transportation, handling, planting, and yields.
  - D. Uniformity in unit size (seed count per unit).
  - E. Uniformity in seed size.

- 1 10. Efforts to establish specific standards for biotechnology enhanced and non-biotechnology  
2 enhanced product certifications.
- 3 11. Adequate testing methods for all commercialized crops in order to protect farmers from  
4 liability and ensure the integrity of our grain supply, moreover:  
5 A. Tests should keep pace with the latest technology and product introductions.  
6 B. Sufficient competition should exist in the testing market to ensure cost-  
7 effectiveness.  
8 C. Tests should be accurate, verifiable, and acceptable to end users.  
9 D. The first-purchaser should be responsible for testing upon taking delivery.  
10 E. The cost of testing should be shared along the agri-food chain.
- 11 12. Harmonization of international standards for biotech and non-biotech content, testing,  
12 adventitious presence, etc. via the World Trade Organization and Codex Alimentarius.
- 13 13. Strict adherence to contracts and sales agreements covering the production, marketing,  
14 and use of biotechnology products.
- 15 14. The strict enforcement of 100 percent quarantine for the research, production, and  
16 processing of pharmaceutical and industrial crops that are not approved for food and feed  
17 use in the United States in order to protect the commercial grain industry and food safety.
- 18 15. Full compensation to farmers for market losses due to lack of enforcement of 100 percent  
19 quarantine on experimental crops.
- 20 16. Biotechnology products that are coming off patent to have:  
21 A. A product development clause allowing researchers to work with that trait, with  
22 proper stewardship restrictions, before the patent expires. This product  
23 development clause should allow for continued product development and the  
24 seeking of export market approvals so products can be brought to market as soon  
25 as patents expire.  
26 B. A system to provide timely access to data collected by the patent holder for the  
27 biotechnology regulatory process. The patent holder should receive fair  
28 compensation for sharing its data.  
29  
30  
31

#### 32 **54. COMMODITY CHECKOFFS**

33  
34 We support:

- 35 1. Voluntary checkoffs for market promotion, development and research that are collected  
36 only once from individuals, marketing agencies or Commodity Credit Corporation (CCC)  
37 loans when forfeited and only if the farmer can have his checkoff refunded.
- 38 2. Legislated mandatory checkoffs for market promotion, development and research if such  
39 checkoffs contain provisions calling for:  
40 A. The program to be voted in or out by the farmers affected;  
41 B. Control of the program by an independent committee of farmers;  
42 C. A full refund of monies upon request to farmers until such time as a refund  
43 referendum (not a poll) is approved/disapproved by a majority of farmers voting;  
44 D. The monies to be used only for purposes intended;  
45 E. The checkoff to apply to all imported products;  
46 F. Checkoff-funded research grants for end-user products that have royalty or  
47 licensing agreements, where feasible, signed with the research institution.
- 48 3. Providing information to farmers which supports the need for increased funding of  
49 programs designed to expand domestic and foreign markets for commodities and  
50 commodity products.
- 51 4. The use of technology to increase voting participation.
- 52 5. Working with commodity checkoff groups to emphasize value-added benefits to farmers  
53 and to focus on higher net returns for farmers.  
54  
55

- 1 6. Efforts to revise rules and regulations governing election of directors of commodity  
2 checkoff boards.  
3  
4  
5

## 6 55. COMMODITY EXCHANGES 7

8 We support: .

- 9 1. The integrity of the Chicago Mercantile Exchange (CME) Group as a pricing mechanism  
10 for commodities.  
11 2. Regulation of the commodity futures business by the Commodity Futures Trading  
12 Commission (CFTC).  
13 3. Encouraging the commodity exchanges to have an active and viable agriculture advisory  
14 committee that meets on a regular basis.  
15 4. Monitoring expanded trading regulations and encourage Illinois Agricultural Association  
16 representation on advisory committees to the Commodity Exchanges.  
17 5. Urging the CFTC to minimize price manipulation and ensure the markets are effective as a  
18 price discovery mechanism.  
19 6. Reviewing price-setting mechanisms and make recommendations for the most effective  
20 price-discovery systems for identity-preserved grains.  
21 7. Encouraging the CFTC to work with the CME Group to provide accessibility, usability, and  
22 affordability of river terminals, and to increase the number of terminals to be used as  
23 delivery points to fulfill hedged grain contracts. This should result in a means to force  
24 convergence between the cash and futures market at expiration of the contract.  
25 8. Encouraging the CME Group to offer "mini" energy and fertilizer futures contracts to better  
26 allow farmers and others to hedge their input costs.  
27

28 We oppose new or unnecessary fees being imposed on market price information.  
29  
30  
31

## 32 56. COMMODITY GROUPS 33

34 We support:

- 35 1. Working closely with commodity groups operating in the state and encourage county Farm  
36 Bureaus to work closely with local representatives of commodity groups. In addition, we  
37 encourage increased cooperation between these commodity groups in Illinois.  
38 2. Offering contractual relationships to those commodity groups desiring such assistance and  
39 services.  
40 3. Scheduling and holding a regular meeting or meetings with representatives of commodity  
41 groups affiliated or contractually related to Illinois Agricultural Association for purposes of  
42 exchanging information and coordinating legislative and regulatory positions and actions.  
43 4. Encouraging all commodity groups to pool resources to create and continue a direct  
44 concentrated effort to educate consumers on the facts associated with the production of  
45 livestock and other agricultural commodities using accepted best management practices.  
46  
47  
48

## 49 57. CONTRACT PRODUCTION AND MARKETING 50

51 We will:

- 52 1. Monitor the current changes in marketing practices for many farm commodities, which are  
53 moving from farmer to buyer without entering the open market, but are being produced  
54 and marketed by contractual specifications.  
55

- 1 2. Strongly encourage the representation of agriculture and assistance in the area of contract  
2 marketing. We will support the assignment of staff to research contracts being considered  
3 and provide education, information, and advice to attorneys representing farmer members  
4 about the ramifications of contracts being entered into and ensure that farmers engaging in  
5 contract production and marketing are adequately protected.
- 6 3. Aggressively seek measures to ensure that adequate price discovery remains in place for  
7 all noncontracted farmers.
- 8 4. Support an improved United States Department of Agriculture (USDA) commodity price  
9 reporting system based upon required price reporting by first purchasers.
- 10 5. Encourage seed and chemical companies to include local elevators in the premium  
11 structure, thus making specialty crops available to more farmers.
- 12 6. Assist individual member farmers in their efforts to negotiate fair and equitable production  
13 contracts by:
  - 14 A. Developing an information clearinghouse and glossary of terms for production  
15 contracts.
  - 16 B. Educating farmers about the risks involved with buyers call provisions and ensuring  
17 that these provisions include:
    - 18 (1) Specific delivery periods with negotiated final delivery date.
    - 19 (2) Payments to seller if delivery period exceeds original contracted delivery  
20 period or if buyer "calls" for delivery prior to the contracted delivery period.
    - 21 (3) Pricing ability to and beyond delivery.
- 22 7. Strongly encourage and work to develop contract language that will limit farmer liability for  
23 grain quality or type to the initial point of delivery.
- 24 8. Publicly urge all parties who have entered into commodity marketing agreements to fulfill  
25 those agreements, despite changes in the prices for the commodity so contracted.

## 58. DAIRY MARKETING

31 We will:

- 32 1. Actively seek input from leaders of the dairy industry and jointly search for solutions to  
33 dairy problems which are satisfactory to both our organization and the dairy industry. We  
34 urge the American Farm Bureau Federation to work constructively on a national dairy  
35 policy that can jointly be supported. Such policy should include a program whereby:
  - 36 A. The plan is market oriented, reflect current marketing conditions, and send the  
37 appropriate signals to dairy farmers to cause adjustments in the production of milk  
38 components according to market needs. It should allow farmers to look to the  
39 marketplace for their long-term economic prosperity.
  - 40 B. The plan enhances net farm income and ensure an adequate supply of milk.
  - 41 C. The plan provides for a worldwide free trade policy.
  - 42 D. The plan continues the present purchase based price support program which has  
43 provided stability to the dairy industry and necessary dairy commodities for  
44 worthwhile federally authorized food feeding programs.
  - 45 E. The use of the Dairy Export Incentive Program (DEIP) is maximized before price  
46 supports are reduced or inventory management plans are implemented.
  - 47 F. The plan does not include dairy quota-type marketing concepts.
  - 48 G. The plan does not include state or regional dairy compacts.
  - 49 H. The plan supports risk management tools that will protect dairy farmers from  
50 catastrophic swings in feed and milk prices.
  - 51 I. The plan would not place limits on a farmers' growth or production.
  - 52 J. The plan encourages development of new products targeted towards the export  
53 market.

- 1 2. Support changes in milk content standards on a national basis under the Pasteurized Milk
- 2 Ordinances so as not to interfere or obstruct interstate movement of milk.
- 3 3. Support the principle whereby Boards of Directors of dairy cooperatives can vote for their
- 4 members in milk marketing and state promotion plans. However, each farmer, whether or
- 5 not a member of a cooperative, should have the right to cast his own ballot in any
- 6 referendum.
- 7 4. Support the increased use of dairy products by the school lunch program and by the
- 8 armed forces.
- 9 5. Work with the dairy industry to coordinate federal and state inspections to eliminate
- 10 duplication and to continue to allow the shipment of milk between states.
- 11 6. Seek to implement a performance based system that would allow for fewer inspections of
- 12 dairy farmers that are achieving high ratings from the Illinois Department of Public Health.
- 13 7. Monitor the potential for dairy processor closures or losses of markets and work to inform
- 14 our membership on alternatives for milk marketing.
- 15 8. Support the pasteurization of raw milk for sale to the public. We also recognize there is a
- 16 segment of consumers that prefer to purchase raw, unpasteurized milk. For those farmers
- 17 who sell unpasteurized milk to consumers, the following guidelines should be followed:
- 18 A. Sales occur directly from farmers -- on the farm -- to consumers provided they bring
- 19 their own containers.
- 20 B. No wholesalers, retailers, grocery stores or third parties be allowed to sell these
- 21 products.
- 22 C. Farmers receive a raw milk permit from the Illinois Department of Public Health to
- 23 produce and sell raw milk, subject to semi-annual inspections.
- 24
- 25
- 26

## 27 **59. DATA COLLECTION, PRIVACY, AND OWNERSHIP**

28  
29 We believe that data collected from farming and agricultural operations is valuable, should remain  
30 the property of the individual, and warrants protection.

31  
32 We will:

- 33 1. Support efforts to better educate stakeholders regarding utilizing new technology or
- 34 equipment that may receive, record, and/or transmit their data.
- 35 2. Support requiring companies that are collecting, storing, and analyzing the data to provide
- 36 full disclosure of their intended use of the data.
- 37 3. Seek formation of and be an active participant in industry discussions regarding
- 38 development of industry wide protocols including, but not limited to, proper disclosure,
- 39 privacy, and use agreement.
- 40 4. Encourage participants in data sharing use agreements to recognize the value associated
- 41 with the data; allowing farmers to receive fair compensation.
- 42 5. Support efforts to educate farmers about the utilization and impacts of Global Positioning
- 43 Systems/Geographic Information Systems (GPS/GIS).
- 44 6. Seek the development of uniform ownership standards for the collection, use, and release of
- 45 GPS/GIS data and other forms of data so that it becomes the private property of the person who
- 46 paid for it or whose assets are being utilized.
- 47 7. Support standardization of formats and protocols developed and used by industry for GPS/GIS
- 48 applications.
- 49 8. Support research to determine the appropriate role of government in the implementation of
- 50 GPS/GIS systems.
- 51
- 52
- 53
- 54
- 55

53  
54  
55

## 60. DEVELOPMENT OF NEW USES AND NEW MARKETS

We will:

1. Aggressively support efforts to develop innovative uses for and increased consumption of farm commodities and co-products.
2. Help develop promotional programs for businesses and restaurants that use U.S.-produced commodities in their daily business and support efforts to develop programs which encourage consumption of Illinois-grown farm products.
3. Support the right of restaurants, without restrictions by local units of government, to market and sell agricultural products and prepared menu choices, provided the product is legally produced using best management practices and industry standards. We support the consumer's right of food choice provided the product is legally produced, marketed, and sold in the United States.
4. Support efforts to develop and procure financing for processing, distribution, and marketing systems for value-added farm commodities with added emphasis on streamlining and expediting the approval process for farmer-owned projects.
5. Support efforts to develop new local marketing points for specialty crops.
6. Cooperate with farmer-invested checkoff groups, organizations, and agencies seeking expanded domestic and export markets, placing special emphasis on value-added products.
7. Support increased funding of grants and guaranteed loan programs to foster research and development of farm commodity and livestock value-enhanced initiatives. A majority of those funds should be targeted to enable farmers to form farmer-owned processing cooperatives.
8. Support research on existing and proposed identity-preserved processes in order that government entities may lend their credibility to voluntary industry standards for certification of identity-preserved agricultural products.
9. Support promoting the use of Illinois-grown produce in Illinois schools and state-funded institutions.
10. Support a growing sheep wool, goat hair, and other animal fiber (e.g. angora, mohair, alpaca, llama) industry in Illinois and recognize the need for continued promotion and development of value-added processing and marketing.

## 61. DIRECT FOOD MARKETING

Community Supported Agriculture (CSA) is a program where a farmer grows food for a group of shareholders who contract to buy a portion of the future crop in a direct marketing relationship.

We support:

1. Farms disclosing to shareholders whether products will originate from a single farm or multiple farms.
2. Farms utilizing Good Agriculture Practices and abiding by any state or federal statutes regarding food safety to prevent any food safety risk, including contamination.
3. Farms, in the event of any product substitution, notifying shareholders by providing a list of products and the physical address of the originating farm of where the product was grown.
4. Farms maintaining records per applicable law including origin of all products, physical address and contact information to ensure traceability of CSA shares for a period of five years.

**62. E-COMMERCE, TECHNOLOGY, AND PERSONAL INFORMATION**

We will support and encourage the development of electronic commerce (e-commerce) marketplaces and technology.

We will:

- 1. Strive to educate and inform farmers of the opportunities and risks in dealing with e-commerce. Educational efforts should include data security, ownership of data, privacy and security issues, online membership agreements, online legal contracts, and other legal and regulatory risks.
- 2. Assist farmers in selecting e-commerce websites by providing a checklist covering areas of concern when dealing with e-commerce. This will include a farmer-to-farmer transfer of e-commerce experiences and information.
- 3. Support activities to develop an alternative dispute resolution system for Internet transactions.
- 4. Support legislation that would stop the release of personal information without the consent of the individual. A privacy statement should be supplied stating that the information will not be released without written consent from the individual/patient/customer/client.
- 5. Support efforts to prevent the use of electronic personal information for illegal activities such as identity theft and credit fraud.

**63. EQUINE AGRICULTURE**

We support:

- 1. Relationships with entities that would allow establishment, access, and maintenance for equine trail activities on publicly-owned recreational trails.
- 2. Education programs to promote a viable and growing equine industry. Such programs may include: responsible ownership, animal husbandry, regulations affecting the equine industry, and disease awareness.
- 3. Efforts to provide insurance and liability coverage that is accessible and reasonable for equine owners and participants involved in equine related activities.
- 4. Options for end-of-life alternatives for equine including humane harvesting and processing for human consumption, or other uses to produce marketable products, provided all state and federal guidelines are observed.
- 5. Continued full funding of federal meat inspectors for equine harvesting facilities.
- 6. The expansion and economic welfare of the horse racing industry.
- 7. Encouraging equine owners to obtain annual Coggins tests to reduce the spread of Equine Infectious Anemia (EIA), and to consider participating in vaccination regimens for West Nile Virus and rabies.
- 8. Encouraging county Farm Bureaus to create and maintain county and/or multi-county equine committees.
- 9. Efforts to develop and execute an Illinois equine census.

We oppose closing existing equestrian trails on federal and state property other than property where irreversible damage could occur.

We will seek legislation allowing equine harvesting in Illinois.

We will seek legislation classifying equine as livestock.

1  
2  
3 **64. FARMER PROTECTION FOR PAYMENT OF GRAIN**

4 We support:

- 5 1. The review of civil and criminal penalties to determine if they are adequate and enforced to  
6 the full extent of the law.
- 7 2. Changes in the U.S. Warehouse Act which would allow any state which has a warehouse  
8 law which is more restrictive and more protective than the federal law, to require  
9 warehouses operating in the state to comply with the state's provisions rather than the  
10 federal statute.
- 11 3. The maintenance of the current state powers of licensing of warehouses and grain  
12 dealers, and general regulation of the grain industry, as embodied in the Illinois Grain  
13 Code, and oppose federal preemption of state authority.
- 14 4. Educating farmers of the potential risks involved in selling grain to unlicensed parties and  
15 how to better identify licensed grain buying facilities.
- 16 5. The concept that farmers who buy more than 100,000 bushels of grain on an annual basis  
17 from other farmers for use as seed or feed, and use price-later contracts, must provide a  
18 bond to the Illinois Department of Agriculture (IDOA) to guarantee payment for all  
19 purchases of grain, except no bond shall be required in those situations where a tenant  
20 purchases, from his landlord, grain produced by the tenant.
- 21 6. The requirement of a reminder notification being made by licensee to the farmer no less  
22 than 30 days prior to the end of the 365-day period of coverage for price-later contracts.
- 23 7. Continuing educational programs to inform members of potential problems of marketing  
24 grain under priced later or deferred price contracts. Farmers should be encouraged to  
25 request prompt payment available to them under laws and regulations. Farmers should be  
26 informed of the risks and costs involved in selling grain without receiving payment.
- 27 8. Maintaining the target balance of the Illinois Grain Insurance Fund at a level that is  
28 commensurate with the cash value of Illinois grain commodities.
- 29 9. Legislation requiring that arbitration be voluntary on the part of both parties to a grain  
30 contract. This should be accomplished by specifying that both parties to a grain contract  
31 must agree to arbitration in writing after the dispute arises, as opposed to allowing farmers  
32 to be forced to give up their right to use the courts as part of a take-it-or-leave-it contract.
- 33 10. Continuing active dialogue and cooperation with IDOA to ensure it has inspectors and  
34 examiners in adequate numbers to fulfill the regulatory obligations of the Illinois Grain  
35 Code.

36  
37  
38 **65. GRAIN AND HAY GRADING**

39 We support:

- 40 1. The United States Department of Agriculture's (USDA) efforts to improve standards for  
41 grain which will reflect storability and highest potential use.
- 42 2. Moisture as a measurement of quantity, not quality.
- 43 3. The development and funding of a voluntary certification process for identity-preserved  
44 grain.

45 We will:

- 46 1. Maintain close liaison with USDA to ensure proposed grade changes are in the best  
47 interests of farmers with particular attention to the proper role for grade factors such as  
48 test weight, foreign material, and other quality factors such as breakability.
  - 49 2. Actively seek potential board members for the GIPSA Grain Inspection Advisory  
50 Committee and work with the American Farm Bureau Federation to increase farmer  
51 representation on the advisory committee.
- 52  
53  
54  
55

- 1 3. Encourage an effective grain discount schedule that is determined at the time of contract  
2 instead of at the time of delivery.
- 3 4. Work with the USDA, private agencies and the State Department of Agriculture to develop  
4 and adopt more accurate equipment and procedures for testing moisture percentage and  
5 test weights in grain.
- 6 5. Encourage the State of Illinois and USDA to continue testing, developing grading  
7 standards, and identifying various qualities of hay and grain.
- 8 6. Support changes in grain grading standards to compensate farmers for high quality  
9 products.
- 10 7. Support research that identifies the advantages and disadvantages of selling grain on a  
11 value-based or component-pricing basis.
- 12 8. Support efforts to maintain grain quality in transit.
- 13 9. Support efforts to standardize and certify testing equipment and operators for all grain  
14 toxins.
- 15 10. Support changes to have processors and elevators show documented economic  
16 justification, including actual cost of correction, for all discount rates concerning grain  
17 quality degradation, i.e., test weight, off-color, odor, or moisture.
- 18

19 We will make it a high priority to have dialogue throughout the agricultural industry to make  
20 moisture and drying schedules for grain based on one-tenth increments of actual moisture  
21 recorded over the allowable moisture content instead of the current practice of rounding up to the  
22 nearest one-half point.

23  
24 We will encourage 15 percent grain moisture for corn to be recognized as the industry standard  
25 for all disposition excluding storage.

## 26 27 28 29 **66. INDUSTRIAL HEMP PRODUCTION**

30  
31 We will:

- 32 1. Seek legislation which would remove industrial hemp from being classified as a controlled  
33 substance.
- 34 2. Support and encourage the production, processing, commercialization, and utilization of  
35 industrial hemp.
- 36
- 37
- 38

## 39 **67. LIVESTOCK PRICING AND MARKETING**

40  
41 We will:

- 42 1. Support legislation, on a state and national basis, establishing the Grain Inspection  
43 Packers and Stockyards Administration (GIPSA) as the overall authority and provider of  
44 oversight to ensure livestock contracts are clearly-written, confidentiality concerns are  
45 addressed, investments are protected, and contractors honor the terms of contracts.
- 46 2. Support providing GIPSA with the authority to enforce contract standards that enhance  
47 price transparency and price discovery with livestock contracts.
- 48 3. Support the incorporation of monthly slaughter capacity reporting in mandatory price  
49 reporting by packers.
- 50 4. Work to ensure GIPSA be provided enforcement authority to ensure that all instruments  
51 used in quantifying quality factors for value determination for livestock are performing to a  
52 set standard.
- 53 5. Support the inclusion of time and date stamp for reporting prices of livestock.
- 54
- 55

- 1 6. Encourage United States Department of Agriculture (USDA) and industry representatives  
2 to examine the practicality of an industry wide, uniform grading system for pork that  
3 includes a quality grade.
- 4 7. Support development and implementation of value-based marketing systems which  
5 convey the value of product quality from the retail market to the farm.
- 6 8. Encourage farmers to fully understand the risks involved with using but not participating in  
7 a market to set a price.
- 8 9. Cooperate with and encourage USDA, livestock groups, and university researchers to  
9 develop and utilize alternative price discovery methods.
- 10 10. Encourage the Illinois Department of Agriculture to seek the most efficient method for sale  
11 barns to report prices for distribution to farmers.
- 12 11. Work with the CME Group, other industry groups, and livestock packers to develop a  
13 market mechanism that allows for improved forward pricing contracts and flexible pricing  
14 opportunities for farmers.
- 15 12. Encourage the CME Group and the Commodities Futures Trading Commission (CFTC) to  
16 recognize packing plants as delivery points to fulfill livestock contracts, resulting in means  
17 to bring convergence between the cash and futures market at expiration of the contract.
- 18 13. Encourage the Illinois Livestock Development Group to work with livestock packers in  
19 order to facilitate the expansion of livestock buying stations in Illinois.
- 20 14. Work with American Farm Bureau Federation (AFBF) and other commodity groups to  
21 support all efforts to improve the livestock price reporting system.
- 22 15. Support all reporting system changes that will generate reported market prices calculated  
23 on premium prices paid as well as price lows in the quality range.
- 24 16. Promote the concept that livestock packers secure at least 20 percent of their purchases  
25 from the cash market.
- 26 17. Support any additional funding from USDA needed to enable GIPSA to conduct these  
27 activities.

28  
29 If a packer is offering a contract that is based upon a cash market, the packer needs to participate  
30 in this market and help set a price.

31  
32 It is imperative that GIPSA has the oversight on mandatory price reporting – not Agricultural  
33 Marketing Service (AMS).

## 34 35 36 37 **68. ORGANIC AGRICULTURE**

38  
39 The growth of the organic food and product markets provides new income potential for Illinois  
40 farmers of all sizes. The integrity of this program and process should be maintained.

41  
42 We support:

- 43 1. All methods of agricultural production and marketing provided they offer opportunities to all  
44 farmers who qualify or meet required standards.
  - 45 2. Efforts to enhance marketing opportunities for producers of organically-grown commodities  
46 just as we support such efforts for conventionally-produced crops.
  - 47 3. The requirement that all farmers, handlers, and retailers must be certified by a United  
48 States Department of Agriculture (USDA)-accredited certifying agent to sell, label, or  
49 represent their products as organic.
  - 50 4. The current program requirement that organic farmers be responsible for taking  
51 appropriate measures (e.g., buffer strips) to protect their crops from pollen drift or other  
52 factors affecting the integrity of their crops.
  - 53 5. Enhanced auditing and enforcement of the USDA-certified organic program in line with its  
54 increasing economic importance and growth.
- 55

- 1 6. Broad availability of information on the USDA-certified organic program, certification  
2 process, and labeling requirements, as well as other unbiased information on organic  
3 products or production.  
4  
5  
6

7 **69. PACKERS AND STOCKYARDS ACT**  
8

9 We urge:

- 10 1. The Department of Justice and the Federal Trade Commission, with the support of the  
11 Grain Inspection Packers and Stockyards Administration (GIPSA), to more aggressively  
12 enforce current anti-trust laws pertaining to packer mergers, market concentrations, packer  
13 feeding, and contracting. Open, competitive markets which include access to slaughter  
14 space and the number of contracted slaughter days should be monitored and enforced if  
15 necessary.  
16 2. The Department of Justice to watch for a potential monopoly on a regional, rather than a  
17 national basis.  
18 3. United States Department of Agriculture (USDA) be included in the decision-making  
19 procedure with respect to proposed mergers and acquisitions of meat packing firms.  
20

21 We will support:

- 22 1. Legislation that grants GIPSA authority to prosecute violators and seek restitution for  
23 farmers in cases involving agricultural production, processing, and marketing violations.  
24 2. Incorporation of a dealer trust provision to the Packers and Stockyards Act. The bonding  
25 requirement for livestock dealers and packers should be reviewed on an annual basis and  
26 be adjusted to reflect the volume of the maximum financial exposure to farmers and/or  
27 their brokers and then be made available to the public.  
28

29 We will seek changes to the administration of the Illinois Livestock Auction Market Law that will  
30 clarify, as well as strengthen, language relating to the use of custodial accounts by livestock  
31 auctions.  
32

33 We oppose packers owning livestock before slaughter with the exception of farmer-owned closed  
34 cooperatives and farmer-owned livestock fed and retail-marketed within the provisions of a  
35 specialty product marketing alliance.  
36  
37  
38

39 **70. PLANT PATENTS AND PLANT VARIETY PROTECTION**  
40

41 For decades, the Plant Variety Protection Act (PVPA) has played a critical role in the protection,  
42 maintenance, and propagation of agricultural seed varieties. While the advent of biotechnology  
43 and the applicability of plant and utility patents to plants have complicated the plant protection  
44 landscape, PVPA should still play a primary role in the protection and propagation of current and  
45 future plant varieties. In order to do that, PVPA must remain relevant and effective.  
46

47 We support:

- 48 1. PVPA as the exclusive statute governing the Intellectual Property Rights for the breeders  
49 of plant varieties.  
50 2. Maintaining the international and domestic gene/germplasm banks/stores. These should  
51 remain easily accessible to the public.  
52 3. Continued plant variety research in the public sector.  
53 4. Compensation for the public contribution in a joint public-private venture.  
54

## 71. SPECIALTY CROPS

Specialty crops are defined as fruits and vegetables, tree nuts, dried fruits, and horticulture and nursery crops including floriculture.

We will:

1. Work to enhance the industry's image and recognize the importance of its contribution to the agricultural economy.
2. Provide programming, legislative, and marketing support for the continued growth and development of various specialty crops that are not already defined as such within the Farm Bill.
3. Support an indemnification program that provides for losses of plants and nursery stocks that need to be eradicated to control the spread of serious communicable diseases. The program should be funded by state/federal sources and the indemnity payments should be based upon current market values.

## 72. TRADE

We support:

1. Increased agricultural exports to efficiently utilize the productive resources of American agriculture to enhance farm income and improve the farm economy through various trade policies and long-term investments.
2. Trade negotiating authority for the President of the United States in order to achieve:
  - A. A full round of World Trade Organization (WTO) trade negotiations including all industry sectors and giving agriculture a full seat at the table. The overall goal should be to lower both tariff and non-tariff barriers for U.S. exports around the world.
  - B. Binding agreements to resolve sanitary and phytosanitary issues on the basis of scientific principles.
  - C. Tariff equalization and increased market access by requiring U.S. trading partners to eliminate tariff barriers within specified timeframes.
  - D. Changes in international agreements and U.S. law and practices that would facilitate and shorten dispute resolution procedures and processes.
  - E. The use of all existing international agreements under the WTO and U.S. countervailing duty laws to prevent the dumping of subsidized agricultural products.
  - F. Immediate, unrestricted trade and distribution of U.S. approved agricultural bio-tech products.
  - G. Harmonization of domestic food safety and quality standards with our international trading partners based on the guidelines set by the WTO.
  - H. Uniform intellectual property protection standards.
3. Improved market access and reduced trade barriers through support of bilateral, regional, and multi-lateral free trade agreements.
4. International Monetary Fund (IMF) efforts provided their actions are based upon sound fiscal and economic policies and further facilitate world trade.
5. Educating our members, legislators and others on the importance of global currency relationships to agricultural trade and foreign competition.
6. Increased funding for, promotion of U.S. agricultural products through United States Department of Agriculture (USDA) programs like Market Access Program (MAP) and Foreign Market Development (FMD).
7. The requirement of Congressional approval of any embargoes of agricultural products proposed by the President.

- 1 8. Developing a program that compensates farmers through market loss payments:
  - 2 A. For competitive disadvantages to U.S. farmers resulting from burdensome
  - 3 domestic regulations or standards that are more strict than those in other countries.
  - 4 B. If currency values harm U.S. farm trade and if it can be achieved within WTO
  - 5 guidelines.
- 6 9. Resumption of normal trading relations and "most favored nation status" with Cuba.
- 7 10. Inspections of imports to the U.S. to protect our domestic production capacity and supply
- 8 of agricultural products from infestations.
- 9 11. Improving informational, organizational, and marketing linkages between and among North
- 10 and South American farmers.
- 11 12. A U.S. Foreign Aid Program that:
  - 12 A. Provides leadership in enhancing global food security and economic development.
  - 13 B. Increases federal commitment to food and agricultural assistance programs.
  - 14 C. Provides foreign aid in the form of agricultural products and value added
  - 15 agricultural products rather than cash, whenever feasible.
  - 16 D. Encourage recipient nations to use or purchase U.S. agricultural goods and
  - 17 services.
  - 18 E. Gives emergency food relief needs the highest priority in foreign aid programs.
  - 19 F. Does not stimulate production or distribution of farm commodities for export that are
  - 20 in competition with the U.S.
  - 21 G. Included P.L. 480 as an important part of a broader strategy for expanding U.S.
  - 22 food aid.
- 23

24 We oppose:

- 25 1. Any U.S. policies that restrict agricultural exports.
- 26 2. The subsidization of any direct foreign competition.
- 27 3. Use of the Precautionary Principle.
- 28 4. Monetary policies that harm U.S. trade.
- 29 5. Shipping restrictions that adversely affect agricultural products
- 30
- 31
- 32

### 33 **73. USDA REPORTING AND OPERATIONS**

34

35 We will:

- 36 1. Support the continuance of the United States Department of Agriculture (USDA) as a
- 37 cabinet level department.
- 38 2. Support the efforts of the National Agricultural Statistics Service (NASS), the Illinois
- 39 Agricultural Statistics Service, and all other governmental agricultural surveys, and
- 40 encourage members to provide their most accurate information when surveyed for crop,
- 41 livestock and other reports on a voluntary basis.
- 42 3. Urge the USDA to improve the accuracy and timely release of national and international
- 43 statistics, and maintain the confidentiality of individual farm reports.
- 44 4. Support legislation to reinstate public access of the Common Land Unit (CLU) data to
- 45 Natural Resource Conservation Service (NRCS) Data Gateway.
- 46 5. Work to improve the accuracy – and the method used by the USDA – in calculating its
- 47 annual net farm income figure.
- 48 6. Support educational efforts to inform the American consumer that the USDA serves a
- 49 variety of consumer interests and not just those of the farm population.
- 50 7. Support continued use of locally-elected farmer county committees to administer and
- 51 oversee USDA farm and agricultural credit programs.
- 52 8. Oppose the expansion of the locally-elected county committees by the addition of
- 53 appointed committee members.
- 54 9. Support maintaining the NRCS within the USDA.
- 55

- 1 10. Encourage USDA to adequately fund, staff, and train local USDA offices to enhance
- 2 farmer services.
- 3 11. Support maintaining the USDA's Agricultural Research Service (ARS) budget at levels no
- 4 lower than the 2007 budget appropriation.
- 5 12. Support the long-term funding of the USDA's Risk Management Agency.
- 6 13. Support USDA plans to create a new soybean yield estimate model for the September
- 7 crop report that reflects the significant changes in soybean production models.
- 8 14. Request that USDA include in its monthly livestock reports information indicating the
- 9 number and origin of imported and destination of exported livestock.
- 10 15. Support USDA efforts to enhance and expand electronic filing of USDA forms and
- 11 dissemination of information.
- 12 16. Support the upgrade of computer technology and appropriate software to allow the NRCS,
- 13 Farm Service Agency (FSA), Risk Management Agency (RMA), and NASS to utilize and
- 14 share the same farm program enrollment and production information, provided appropriate
- 15 privacy disclosures and safeguards are utilized.
- 16 17. Support a more thorough review, including local input, of any proposed closure of a local
- 17 USDA or FSA office before a decision is made.
- 18 18. Urge USDA NASS to regularly report data on the production and use of ethanol co-
- 19 products used for livestock feed.
- 20
- 21
- 22

#### 74. CONSERVATION RESERVE PROGRAM

We support:

- 26 1. The continued funding of the Conservation Reserve Program (CRP) through current
- 27 methods, plus private sources of contributions (e.g. conservation groups, hunting groups,
- 28 and environmental groups) to remove fragile lands from production.
- 29 2. Basing the judging criteria for CRP enrollment upon the land's erosion potential as
- 30 cropland and not on its current erosion status.
- 31 3. Conservation programs with a focus on protecting environmentally sensitive areas with
- 32 filter strips, buffers, and other beneficial practices while reducing overall program costs.
- 33 4. An expansion of the continuous signup CRP acreage to include:
- 34 A. Filter strips along waterways.
- 35 B. Greater widths of waterways, filter strips, field borders, and riparian buffers.
- 36 C. Setbacks at road intersections.
- 37 D. Crop protection product setbacks around tile inlet structures.
- 38 E. Up to one acre filter strips around standpipes and other intakes where surface
- 39 water enters directly into subsurface water.
- 40 F. Grassed terraces.
- 41 G. Buffers around villages, timbered areas, irrigation reservoirs, ponds, and
- 42 stormwater retention basins.
- 43 H. Expanding the statewide allocations on field borders and upland restoration
- 44 projects.
- 45 I. Approving a 20 percent incentive for all projects using native prairie grasses, forbs,
- 46 shrubs, or trees.
- 47 J. Allowing enrollment of and acceptance of "infeasible to farm" acres (an area that is
- 48 too small or isolated to be economically farmed).
- 49 K. Farms declared not insurable in the crop insurance program because of wildlife
- 50 crop damage to be eligible to be enrolled in the CRP.
- 51 5. Legislation which ensures that both tenant and landlord interests will be fairly protected.
- 52 6. Limitations on participation rates so as not to adversely affect local farm land rental rates.
- 53 7. The practice of planting vegetative filter strips along both sides of ditches and waterways
- 54 to improve water quality. Strips of variable widths should be eligible for the CRP.
- 55

- 1 8. Programs being made available to give farmers viable economic options to traditional crop  
2 production following expiration of CRP contracts.
- 3 9. The ability of all drainage district easements to be included in the CRP filter strip program.
- 4 10. Provisions that would allow farmers and landowners to terminate participation in the CRP if  
5 the United States Department of Agriculture (USDA) cannot meet the agreed contractual  
6 payment amount within 30 days of its due date or is forced by budget constraints to reduce  
7 the annual payment amount as set forth in the CRP Contract. If the farmer opts out of the  
8 CRP all past due monies will be paid with accrued interest.
- 9 11. Continuation of CRP on fragile and environmentally sensitive lands formerly enrolled in  
10 CRP if the CRP is not continued at current levels. Qualified land areas should be  
11 determined by county Soil and Water Conservation Districts (SWCDs) and the Natural  
12 Resources Conservation Service (NRCS).
- 13 12. Encouraging USDA to give adequate credit during CRP sign-ups for areas throughout the  
14 nation that experience wind erosion on sandy soils.
- 15 13. The broadening of criteria for enrollment or re-enrollment of land in CRP. Examples of the  
16 criteria include but are not limited to:
  - 17 A. Land with the highest environmental benefits index (EBI).
  - 18 B. Land targeted based on type of CRP cover or conservation practice, with priority  
19 given to land in trees, alley cropping, or with special conservation attributes.
  - 20 C. Land targeted based on water quality, air quality, soil quality, and wildlife.
  - 21 D. Land that, if cultivated, would be most damaging to the environment. For example,  
22 land that would likely opt out of farm programs and conservation compliance due to  
23 high compliance costs.
- 24 14. The elimination of the Erodibility Index as an exclusionary consideration for concentrated  
25 CRP sign up.
- 26 15. Wildlife habitat improvement, especially on CRP acreage.
- 27 16. The Conservation Reserve Program's State Acres for Wildlife Enhancement (SAFE)  
28 practice that provides financial incentives to producers.
- 29 17. Recognition in the Environmental Benefits Index (EBI) that qualifying established cover  
30 practices on acreages being re-enrolled in the CRP provide certain benefits over  
31 destroying existing stands to plant preferred species.
- 32 18. The evaluation of all CRP property by the county NRCS office staff to ensure that  
33 previously recommended Best Management Practices (BMPs) have been maintained  
34 before the property can be re-enrolled in CRP.
- 35 19. Haying and grazing of CRP acres at the discretion of the Secretary of Agriculture in  
36 weather-related or other emergency situations in a timely manner.
- 37 20. Each state Farm Service Agency (FSA) office determining CRP rates and acreage  
38 qualifications as opposed to the national USDA office.
- 39 21. Increasing the enrollment of filter strips in the CRP and offering incentives for re-  
40 enrollment.
- 41 22. The continuation and expansion of the Conservation Reserve Enhancement Program  
42 (CREP) with full funding.

43  
44 We will oppose:

- 45 1. Any effort to allow the public to automatically use or have access to private property that is  
46 enrolled in CRP.
  - 47 2. Further changes in CRP which would allow conservation acreage to be brought back into  
48 permanent production before the ten-year contract expires.
  - 49 3. The use of CRP land for biomass fuel production without a corresponding reduction in  
50 CRP payments.
- 51  
52  
53  
54  
55

1  
2  
3 **75. FARM CREDIT**

4 We will:

- 5 1. Work to maintain the availability of adequate sources of credit for all agricultural interests.
- 6 2. Encourage all agricultural lenders to publicize their rates and loan policies.
- 7 3. Support Farm Service Agency (FSA) assistance to those borrowers who cannot obtain credit otherwise.
- 8 4. Support the continued graduation of FSA borrowers who exhibit the ability to obtain credit from conventional sources and continue to work with FSA in developing improved and flexible programs with more effective use of FSA funds.
- 9 5. Support the FSA in providing adequate levels and terms of credit in a constructive and responsible manner.
- 10 6. Review and recommend appropriate FSA agency policy on loan term limits, loan size limits, and interest rate subsidies.
- 11 7. Require that FSA loans be secured by adequate collateral and reasonable repayment capacity.
- 12 8. Promote the use of past business performance, when available, as a strong indicator of future performance when considering approval of an FSA loan for a farmer.
- 13 9. Support educational programs for members and agricultural lenders on financial management and marketing programs.
- 14 10. Urge all lenders to cooperate with federal and state programs designed to help farmers with financial stress.
- 15 11. Support the Illinois Finance Authority's (IFA) current agricultural loan programs and will cooperate with IFA in the expansion of existing programs and the development of new programs.
- 16 12. Support legislation so that persons who have made prepayments to failed licensees for production inputs or services will receive a 100 percent refund of those payments, making the purchaser of the inputs first in line as a secured creditor.
- 17 13. Support increased funding for federal guaranteed farm loan programs. These programs should be made more user friendly for both bankers and farmers by allowing increased flexibility of repayment terms and minimizing paperwork.
- 18 14. Actively seek legislation so that alfalfa and grassland forages are considered farm storage facility loan commodities.
- 19 15. Support elimination of the "exit provision" in the Farm Credit Act.

20 We oppose:

- 21 1. Any move by commercial banks and/or bankers to alter the structure of the Farm Credit System (FCS), including attempts to replace farmers on boards of directors with commercial bankers.
- 22 2. Commercial banks having access to money procured by virtue of the agency status enjoyed by the FCS.
- 23 3. The sale of district Farm Credit Service Banks to commercial or private banking interests.
- 24 4. All efforts to limit access to credit by major credit suppliers or to limit competition or to artificially set interest rates by government edict.

25 While competition in farm credit markets is in the best long-term interests of agriculture, we encourage commercial banks, the FCS, and other lenders to seek out opportunities to cooperate in meeting the financing needs of farmers. The FCS must remain available to the farmer-owner of FCS through the cooperative system as an alternative to commercial banks.

**76. GOVERNMENT ECONOMIC POLICIES**

Government economic policies should be designed to encourage economic stability, increased productivity, a greater competitive ability in the international market, and a high level of economic well being.

We support:

1. Using a federal budget surplus to reduce the federal debt and to cut taxes.
2. Federal policies bringing about lower real interest rates.
3. A reduction in the size of the federal government.
4. A constitutional amendment to require the federal government to operate on a balanced budget.
5. A constitutional amendment to restrict the spending authority of the federal government to a realistic percentage of the gross national product (GNP).
6. A requirement that federal and state government agencies return unspent money to their respective treasuries without a budget cut or penalty for the new fiscal year.
7. Legislation or a constitutional amendment to require the federal government to fund programs which it mandates on state or local governments.
8. The use of competitive bidding, cost containment, reductions in waste and a requirement that new programs be adopted only when existing programs are reduced or eliminated to offset the cost of the new program as a means to control government spending.
9. Requiring competitive bidding for any major state or federal project to ensure the most efficient development and construction of those projects.
10. Privatization of governmental services that could provide savings to the taxpayer and render government services more economical.

We oppose:

1. Awarding federal grant monies to citizen action groups.
2. Increased taxes unless accompanied by significant spending cuts. In such cases, the tax base should be broadened rather than increasing existing tax rates.
3. Efforts to shift programs "on budget" or "off budget" in order to mask the true economic condition of our nation.
4. The financing of gambling facilities through tax exempt industrial development bonds or state guaranteed loans.

The goal of monetary policy should be general price level stability. The Federal Reserve should conduct a sustained, long-term monetary policy which will minimize inflation and deflation of prices. We favor an independent Board of Governors of the Federal Reserve System. Someone on the Board should have a working knowledge of agriculture. We favor a full and complete independent annual audit of all activities of the Federal Reserve System.

We will continue to make the adoption of sound economic policies by the state and federal government a major priority. We urge county Farm Bureaus to do likewise.

**77. GOVERNMENT FARM POLICIES**

We believe United States agriculture should be an integral part of the solution for hunger, energy, environment, food security, our balance of trade, and national security. In order to accomplish these goals, the farm bill must address world competition, humanitarian need, and world trade obligations. A stable, safe agricultural production system is essential to the United States' economy and national security.

- 1 To accomplish this objective, we believe:
- 2 1. Consumers should have a reliable, abundant, safe, and nutritious food supply.
  - 3 2. In enhancing U.S. agriculture's competitiveness in the world market.
  - 4 3. In minimizing world hunger and nutrition deficiencies.
  - 5 4. In creating a long-term, competitive, desirable agricultural growth industry.
  - 6 5. In improving the quality of rural life by increasing rural economic development.
  - 7 6. In providing revenue protection to farmers thus protecting net farm income.
  - 8 7. The market should give accurate economic signals to consumers and farmers.
  - 9 8. There should be less reliance on government and more on the market.
  - 10 9. Improvements to the environment can be achieved through expanded soil conservation,
  - 11 water and air quality initiatives, and advanced technological procedures that are science-
  - 12 based and are economically feasible.
  - 13 10. Farmers should be compensated for their positive impact on habitat, wildlife, and the
  - 14 environment.

15  
16 We oppose:

- 17 1. Severing the essential link between the nutrition title and the commodity title of the Farm
- 18 Bill.
- 19 2. Any type of government supply control or acreage reduction program, with the exception
- 20 of conservation programs.
- 21 3. A Farmer Owned Reserve for agricultural commodities.
- 22 4. The extension of Commodity Credit Corporation (CCC) commodity loans beyond the
- 23 current nine-month term.

24  
25 We support:

- 26 1. Appropriate income assistance until reforms in taxation, regulation, and market access
- 27 and growth are achieved.
- 28 2. Maintaining the sanctity of contracts established in the farm bill.
- 29 3. Allowing tenants with multiple landlords to treat each farm as a separate entity for
- 30 compliance with the farm bill.
- 31 4. Not holding tenants responsible for landlord's actions of farm program payments and
- 32 eligibility. This should hold steady as long as the tenant had no involvement in what took
- 33 place. The farm in question should go through the hearing process but other farms should
- 34 not be affected. Actions by a landlord should not place any tenant farm program
- 35 payments in jeopardy. The tenant should be able to maintain eligibility for all farms.
- 36 5. The ability of landlords to refuse payment from the farm program and allow tenants the
- 37 ability to obtain complete payment from the farm program (even if a combination lease
- 38 exists between the landlord and tenant).
- 39 6. The elimination of any United States Department of Agriculture (USDA) requirement to
- 40 report the specific cash rental amounts outlined in lease agreements between a landlord
- 41 and a tenant in an effort to protect a farmer's right to privacy. We do, however, support
- 42 the requirement to report the type of lease agreement.
- 43 7. Strengthening the criteria for non-landowner persons eligible for farm program payments
- 44 by requiring a significant contribution of active personal management in the farm decision-
- 45 making process and labor in the farming operation. The current exemption for crop share
- 46 landowners should be continued.
- 47 8. Farmers ability to improve existing drainage systems without being penalized. Land that
- 48 has been in production, including pasture, should be exempt from the sodbuster and
- 49 swampbuster provisions.
- 50 9. The implementation of more efficient processes, systems, and procedures in order to
- 51 consolidate and simplify farm program participant visits to the USDA.
- 52 10. Consolidation of the power of attorney form to enable the Natural Resource Conservation
- 53 Service (NRCS) and Farm Service Agency (FSA) to honor the same power of attorney
- 54 forms.
- 55

- 1 11. Open enrollment of land in the farm program that was not previously in the program and  
2 has changed tenancy or ownership during the duration of the farm bill.
- 3 12. Government agencies serving farmers by adjusting hours to accommodate the needs of  
4 farmers with off-farm employment and increased use of internet for electronic filing.
- 5 13. The means to implement and administer programs being in place prior to starting dates for  
6 new programs.
- 7 14. Adding alfalfa and grassland forages as covered commodities.
- 8 15. The continuation and expansion of the Environmental Quality Incentive Program (EQIP)  
9 and the Conservation Stewardship Program (CSP) with full funding, as long as these  
10 programs complement – but do not replace – programs in the new farm bill.
- 11 16. Providing a clear explanation of the CSP that would create interest and help more farmers  
12 qualify for this program.
- 13 17. Allowing a compliant entity to be eligible to participate in USDA programs on all parcels  
14 that are not in violation of swampbuster or sodbuster regulations.

### 15 16 **Future Farm Policy**

17 We support a WTO-compliant farm bill that provides revenue protection for farmers and includes  
18 the following concepts and provisions:

- 19 1. A crop insurance program that is the basis of an effective risk management/safety net  
20 program and is considered the top priority in future farm bill negotiations. As such we  
21 support:
  - 22 A. Maintaining federal support at or above current levels for farmer premiums.
  - 23 B. Risk Management Agency authorization to develop new programs such as farmer  
24 savings accounts.
  - 25 C. Program improvements that would better reflect current trend line yields and  
26 provide loss-ratio fairness across crops.

27  
28 We also support:

- 29 1. A commodity loan program.
- 30 2. Raising loan rates above levels established in the 2008 farm bill for current program  
31 commodities and loan repayments be credited back to CCC to maintain budget neutrality.
- 32 3. Payments or programs that compensate farmers for activities deemed socially or  
33 environmentally beneficial.
- 34 4. Encouraging production and stewardship decisions that will attract public support.
- 35 5. Allowing farms that have not been participating in farm programs and are not eligible to  
36 receive program benefits to establish a base and enroll in future farm programs.
- 37 6. The continuation of and funding for Biomass Crop Assistance Program (BCAP).
- 38 7. Livestock Disaster and Emergency Program provisions.

### 41 42 **78. LABOR**

43  
44 We will support:

- 45 1. A proactive and positive effort to pursue a dialogue with organized labor to identify  
46 common ground and common goals to achieve a common good.
- 47 2. The effective and prompt administration of existing laws to resolve secondary boycotts or  
48 other illegal actions which disrupt the orderly flow of commerce.
- 49 3. Maintaining the agriculture exemption for overtime pay provisions under the Illinois  
50 Minimum Wage Law.
- 51 4. A study by the appropriate state agencies regarding the programs and activities of  
52 federally funded Legal Services Corporation entities in Illinois. Such a study would review  
53 the impact of such programs on agricultural operations.

- 1 5. The American Farm Bureau Federation efforts in lobbying Congress to investigate the
- 2 Legal Service Corporation's behavior and scrutinize its budget.
- 3 6. The minimum wage rate at its current level and support an increase only when it is
- 4 believed to be non-inflationary.
- 5 7. The passage of federal legislation to establish an improved program for agricultural guest
- 6 workers that assist all crop and livestock farmers in finding, retaining, and maintaining an
- 7 adequate, legal, and cost-competitive labor supply.
- 8 8. Permanent employment-based immigration visas for those individuals who have a
- 9 demonstrated work history and can pass an appropriate background screening.

10

11 We will oppose:

- 12 1. The use, by either labor or management, of force, coercion, intimidation, secondary
- 13 boycotts or other such means designed to force its will upon the other.
- 14 2. Frivolous lawsuits which are filed against agricultural growers by Legal Services
- 15 Corporation entities which create economic hardship for the agricultural operations
- 16 involved and appear to be intended only to harass the employer of farm labor into
- 17 providing additional benefits without justification.
- 18 3. All legislation which increases the revenue base for legal assistance activities in the State
- 19 of Illinois.
- 20 4. Legislation that would require state licensure and inspection for electrical work performed
- 21 on agricultural property and single-family residences.
- 22 5. The elimination of the present family farm exemption in the child labor provisions of the
- 23 Fair Labor Standards Act (FLSA).
- 24 6. Amnesty (as defined as a general pardon for offenses against the laws of the United
- 25 States of America) for undocumented immigrants.

26

27

28

29

30

## 79. RISK MANAGEMENT/CROP INSURANCE

31

32

33

34

35

We encourage continued farmer education of risk management alternatives, efforts to refine existing risk management tools, and the development of new crop insurance and other risk management tools.

36

### Risk Management

37

38

39

40

41

42

43

44

45

46

47

48

49

50

51

52

53

54

55

We support:

1. Providing leadership in seeking new ways for farmers to manage risk through the private sector.
2. The use of pilot programs that would serve to assist farmers in learning to utilize various risk management tools for all products, including livestock. Farmers willing to participate in the pilot program should be allowed to choose from a variety of approved risk management methods designed to substantially manage the risk of the farming operation. The cost of implementing the chosen risk management method should be subsidized during the pilot program.
3. Education programs that provide risk assessment and risk management as well as professional education for farmers in marketing, financial management, and government regulations.
4. The necessary legislative and regulatory changes to establish a Farmer Investment Savings Account into which a farmer could contribute pre-tax dollars for self-insurance and be allowed to make withdrawals at the contributor's discretion.
5. Fully funding the Standard Reinsurance Agreement at the levels outlined in the 2014 Farm Bill.

## Crop Insurance

We will actively seek a crop insurance program which:

1. Provides payments for actual losses, including losses incurred from delayed or prevented plantings, arising from natural causes.
2. Requires consistent interpretation and implementation of all federal crop insurance provisions, especially Prevent Plant provisions.
3. Provides coverage that is written and losses paid on the basis of dollars per acre rather than based on a guaranteed level of production.
4. Is offered and serviced through private companies, willing and able to assume some level of risk, as opposed to Farm Service Agency offices.
5. Can be affordably reinsured through the federal government.
6. Eliminates federally mandated requirements in order to be eligible to participate in the federal farm programs.
7. Allows the Secretary of Agriculture the right to extend the planting deadline for crop insurance purposes for untimely plantings due to weather delays.
8. Allows farmers and/or landlords to opt out of crop insurance coverage, but in so doing would not be eligible for federal disaster payments on crop losses.
9. Requires that the individual county final yield averages needed for Area Risk Protection Insurance policies be released one month prior to the deadline for the crop insurance sales closing date for the federal crop insurance program. This date should be uniform for all regions involved in the program.
10. Allows individual units to be insured on a Farm Service Agency (FSA) optional unit basis.
11. Requires all United States Department of Agriculture (USDA) agencies accepting production data, including acreage and yield data that has been certified, to reconcile the data in order to streamline the reporting process and reduce the potential for fraud and abuse.
12. Requires the automatic extension of the Risk Management Agency (RMA) acreage reporting deadline in the event the FSA certification deadline is extended. The extension of the deadlines should maintain the existing time period between the deadlines.
13. Promotes the use of Soil Productivity, derived from existing County Natural Resource Conservation Service (NRCS) Soil Surveys, as a guide for establishing base T yields for Federal Crop Insurance.
14. Allows the use of the higher of either the base price (such as February average for corn and soybeans) of the appropriate futures contract or loan rate for that crop in order to establish the initial revenue guarantee for revenue-based crop insurance policies.
15. Studies the elimination of Catastrophic (CAT) coverage and applying those subsidy dollars to higher coverage levels.
16. Allows Written Agreements, once granted, to remain effective until loss ratios dictate otherwise.
17. Achieves actuarial soundness by crop, county and state by devoting additional resources to allow annual review of RMA rates for all crops in all states, with priority given to:
  - A. Adjusting insurance rates to completely and expeditiously reflect mandated loss ratios.
  - B. Full implementation of rate reductions for states with consistently low loss ratios.
  - C. Including non-insured ground in production review in order to receive the most accurate assessment possible of each county's production capacity.
18. Devotes additional research dollars to improve existing policies to develop new insurance tools and foster the development of new and innovative delivery systems.
19. Requires clear delineation during the sales process and the billing process to clearly distinguish between federal crop insurance policies and private company add-on products.
20. Separates basic or enterprise units by practice - for example - initial- or double-crop soybeans, where a claim calculation of one practice has no effect on the other practices and the lengthening of planting dates to better reflect variety maturity, growing season

- 1 length, Land Grant University or processor recommendations, geographic areas, and
- 2 weather conditions.
- 3 21. Allows double-cropped feedgrains to be insured as a separate unit if best management
- 4 practices are followed.
- 5 22. Allows the use of all elevator quality factors conducted by certified graders using certified
- 6 testing equipment. These factors include moisture, foreign material, test weight and
- 7 damage.
- 8 23. Offers replant benefits that accurately reflect actual cost of replanting the damaged crop.
- 9 24. Allows farmers and landlords to receive replant benefits reflective of their share of the
- 10 expenses to replant the damaged crop, regardless of the crop insurance company or type
- 11 of crop insurance policy they or the landlord/tenant have.
- 12 25. Requires RMA claim guidelines to take into consideration economic justification when Best
- 13 Management Practices are used to determine treatment thresholds and timeliness of
- 14 applications.
- 15 26. Allows crop insurance agents to be involved in the claims process to provide enhanced
- 16 and seamless service to farmers.
- 17 27. Collects premiums for spring-planted crops no earlier than October first.
- 18 28. Allows beginning farmers to use county yield estimates instead of the calculated T-yield
- 19 when establishing yields for federal crop insurance.
- 20
- 21
- 22

## 23 80. SOCIAL SECURITY

### 24 We support:

- 25 1. Studies and pilot programs testing the feasibility of private sector alternatives to Social
- 26 Security as a means to devise long-term solutions to maintain the solvency of the Social
- 27 Security trust fund and to ensure retirement benefits for younger Americans. Such studies
- 28 and pilot programs should be devised to protect the benefits of the current and future
- 29 recipients.
- 30 2. Stabilizing benefits rather than increasing Social Security taxes.
- 31 3. Continued separate deductions for Social Security taxes to make them clearly identifiable.
- 32 4. Correction of the inequity in the method of determining earnings of self-employed persons
- 33 subject to Social Security taxes when a substantial portion of the earnings are related to a
- 34 return on investment in business property. A rent equivalent should be made an allowable
- 35 deduction from earnings for this purpose.
- 36 5. Allowing self-employed persons to deduct their Social Security taxes as a business
- 37 expense.
- 38 6. Repeal of the Social Security offset law.
- 39
- 40

### 41 We oppose:

- 42 1. Regulations which classify Conservation Reserve Program payments to Social Security
- 43 recipients as earned income. They should be considered as rent.
- 44 2. Social Security payments to alien workers who reside outside the U.S. or its territories.
- 45 3. The use of a total farm payroll test to determine if wages are subject to Social Security
- 46 taxes.
- 47 4. Using Social Security funds for purposes other than Social Security.
- 48
- 49
- 50
- 51
- 52
- 53
- 54
- 55

1  
2  
3 **81. ADVERTISING AND PUBLIC IMAGE**  
4

5 We will be a leading voice of Illinois agriculture and continue to work with and encourage  
6 agribusiness industries, through their advertising, to present a positive and professional image of  
7 farmers and agriculture to the general public.

8 We encourage individual farmers to express their opinions with their local dealers and company  
9 representatives about agricultural product advertising on television. All advertising should convey  
10 the image of the farmer as a responsible user of these products.

11 We will encourage companies that provide animal feeds, shelter, and health products to advertise  
12 the positive aspects of animal production in addition to advertising the products used for animal  
13 production.

14 We support the creation of a separate stand alone not-for-profit agricultural image organization  
15 that unites consumers, farmers, and businesses under a common cause which improves the  
16 image of agriculture and confronts negative advertising and promotional efforts that are impacting  
17 our industry.

18 We favor programs that encourage county Farm Bureaus to join together with other farm  
19 organizations to support activities to reach the greatest number of people with messages  
20 designed to improve public understanding of agriculture. These activities should be a cooperative  
21 venture in which county Farm Bureaus and the Illinois Agricultural Association join together in  
22 planning, executing and funding displays, exhibits, and other public relations activities for major  
23 expositions and other similar events in Illinois.

24 We will actively communicate and promote to news outlets and all forms of the media a  
25 consistent message that farming professionals are front line, responsible stewards of our  
26 environment. To help accomplish this, we will expand web-based resources that contain pre-  
27 approved messages (for example, press releases, letters to the editor, and public service  
28 announcements) that provide clear, consistent, and uniform messages on a variety of agricultural  
29 topics that aid county Farm Bureaus in providing a rapid public response as local issues arise.

30  
31  
32  
33  
34  
35  
36 **82. FARM BUREAU RELATIONSHIP WITH AFFILIATED COMPANIES**  
37

38 We believe that Farm Bureau members are the foundation upon which all affiliated companies  
39 were built.

40 We encourage county Farm Bureaus to:

- 41
- 42 1. Maintain and improve their working relationship with affiliated company boards of directors  
43 and management through interlocking board members and other means.
  - 44 2. Hold periodic affiliated company and Farm Bureau joint board meetings on both the state  
45 and county level and to hold regular county Farm Bureau and affiliated company joint staff  
46 meetings.
- 47

48 We encourage affiliated companies, whenever practical, to consult with the Illinois Agricultural  
49 Association (IAA) and county Farm Bureaus before initiating major changes in products, services,  
50 policies, and operating procedures that impact the Farm Bureau organizations or Farm Bureau  
51 members. Such consultation is intended to generate wide understanding of the purpose and  
52 necessity of the proposed changes and to allow the Farm Bureau organizations and Farm Bureau  
53 members to express their thoughts and insights on the impact of the proposed changes.

**83. GOVERNMENT REGULATIONS**

We support regulations to protect the public health, safety and welfare, provided:

1. The regulations are based upon scientific data which has been subject to replication and peer review.
2. The costs as well as the benefits of the regulations have been carefully weighed.
3. The regulations have been subject to independent analysis and public scrutiny.
4. Alternatives to regulation have been considered, especially the provision of market-based incentives.
5. The regulations respect the practicalities of doing business in the industry being regulated.

We, in cooperation with American Farm Bureau Federation, should place greater emphasis on the regulatory process to better protect agriculture’s interest during rule-making. The U.S. Environmental Protection Agency (USEPA) should be required to collaborate with the U.S. Department of Agriculture (USDA) in the development of conservation, and clean air and water regulations impacting agriculture. Members should increase their involvement in the regulatory process by responding during comment periods to ensure that those writing regulations better understand the potential impact on individuals.

Regulations promulgated as a result of congressional or state legislative action should be reviewed by the congressional committee of jurisdiction for federal regulations and the Joint Committee on Administrative Rules (JCAR) for state regulations prior to implementation in order to ensure that the legislative intent is being followed.

We support legislation to amend existing laws to reduce and eliminate duplicative services, programs and burdensome government regulations.

We oppose establishing law through Executive Orders that circumvent Congress, do not allow for public review and input, exceed constitutional and statutory guidelines, or impose significant economic impact on citizens, businesses, and local or state governments.

**84. INVOLVEMENT OF MEMBERS IN FARM BUREAU**

We believe the county Farm Bureaus are the strength of the Illinois Agricultural Association. We recognize that county Farm Bureaus are important to the individual members and it is these individual members that become the most integral parts of the Illinois Agricultural Association. The support and direction of the individual members are of utmost importance to the organization.

The thinking, direction and support of all members are needed in our organization. We urge active involvement of men and women of all ages in the committee structure on the state and county level. We will continue efforts to strengthen county and state member programs to enhance the value of Farm Bureau membership.

We especially urge county Farm Bureaus to appoint at least one member of the Women's and Young Farmer/Young Leader Committees to serve on county Farm Bureau standing committees. The representatives of each county committee should meet regularly with their Board of Directors.

We encourage county Farm Bureaus to present opportunities for active members to gain the background and experience necessary to be effective leaders.

1 The Young Farmer/Young Leader Committee is important in assuring the maximum opportunity  
2 for young farmers to participate in Farm Bureau programs.  
3

4 Counties are encouraged to follow the American Farm Bureau Federation (AFBF) Young Farmer  
5 and Rancher program age limits so that county Young Farmer and Young Leader Committees will  
6 be eligible for the Illinois Farm Bureau (IFB) Young Leader and AFBF Young Leader and Rancher  
7 programs.  
8  
9

## 10 11 **85. LEGISLATIVE AND AGRICULTURAL LEADERSHIP** 12

13 We will:

- 14 1. Take aggressive positions in the development of legislation and regulations.
- 15 2. Involve county Farm Bureau leaders and members in the legislative and regulatory  
16 process.
- 17 3. Involve various groups and organizations in the development of such legislation and  
18 regulations when there is common interest in order to find the best solutions to the  
19 complex problems facing us.
- 20 4. Cooperate with county Farm Bureaus in developing and implementing programs to  
21 familiarize legislators with rural problems and concerns and to familiarize rural leaders with  
22 urban problems and concerns.  
23

24 We urge the American Farm Bureau Federation and the Illinois Agricultural Association to take a  
25 leadership role in working with groups and organizations with common goals to help develop a  
26 common policy position on national legislation and regulations.  
27  
28  
29

## 30 **86. MEMBER AND PUBLIC RELATIONS** 31

32 We will develop and implement programs to make Illinois Agricultural Association (IAA) and  
33 county Farm Bureaus more visible and to publicize more of what IAA and county Farm Bureaus  
34 are doing for agriculture as professional organizations.  
35

36 We support maintaining a reward program to reward informants who provide information leading  
37 to the arrest and conviction of persons who commit theft, arson, or vandalism to the property or  
38 premises of Illinois Agricultural Association members.  
39

40 In order to build and maintain favorable public attitude toward farmers and farming, we will:

- 41 1. Continue to monitor public opinion toward agriculture and formulate public relations  
42 programs to maintain the farmer's favorable image.
- 43 2. Develop a centralized information resource to keep members informed on key issues of  
44 public concern so they can respond to those concerns in their day-to-day contacts.
- 45 3. Continue information programs which will help non-farmer members of Illinois Farm  
46 Bureau better understand and support the goals and objectives of the organization.  
47  
48  
49

## 50 **87. POLITICAL INVOLVEMENT** 51

52 We support a person's right to individually or collectively contribute time and money to candidates  
53 of his or her choice. We recognize the vital role such participation plays and will seek to secure  
54  
55

1 the substantial participation of farmers in the political process, both as individual citizens and  
2 members of the Illinois Agricultural Association.  
3

4 We strongly defend a person's opportunity to participate in the legislative process on an equal  
5 basis with those who have been active in donating their time and money to campaigns. We urge  
6 the vigorous enforcement of rules which secure fair play and equal access to government for all  
7 people.  
8

9 We favor the continued establishment and expansion of political involvement programs to  
10 promote Farm Bureau policy by aiding and promoting candidates for public office who, through  
11 their actions, have supported the goals and purposes of the Illinois Agricultural Association.  
12  
13  
14

### 15 **88. RESPONSIBLE COMMUNICATION**

16  
17 We urge all media, governmental agencies, and health care professionals to be unbiased and  
18 accurate in their public statements to avoid unwarranted fear among the general public.  
19

20 We support:

- 21 1. Concerted efforts to use scientific names in reference to a particular virus or disease.
- 22 2. Balanced reporting that maintains a risk relation factor between agricultural/consumer  
23 benefits and possible risks.
- 24 3. Challenging individuals and organizations who misrepresent scientific evidence and cause  
25 financial damage to farmers.  
26  
27  
28

### 29 **89. UNIFORM COOPERATIVE AGREEMENT**

30  
31 We urge county Farm Bureau boards of directors to review annually the Uniform Cooperative  
32 Agreement between the county Farm Bureaus and the Illinois Agricultural Association (IAA).  
33 Attention should be given to the need for counties and the IAA Board of Directors to support  
34 policy positions once adopted by the IAA delegates.  
35  
36  
37

### 38 **90. 9-1-1 TELEPHONE SYSTEM**

39  
40 We support the enhanced 9-1-1 telephone system in the State of Illinois. We will encourage and  
41 assist county Farm Bureaus in the support of a referendum for the passage of an enhanced 9-1-1  
42 telephone system and provide input into the implementation of the local system.  
43

44 We support legislation:

- 45 1. Providing that all funding intended for 9-1-1 systems should carry through to those  
46 facilities.
- 47 2. To increase the 9-1-1 surcharge on cell phones to adequately support the 9-1-1 telephone  
48 system.
- 49 3. That will require the State of Illinois to forward 9-1-1 fees to the 9-1-1 operating systems  
50 within 30 days of receiving such fees.  
51

54  
55

**91. FARM SAFETY**

We encourage all county Farm Bureaus to develop and maintain an aggressive farm safety education program to help protect our current and future generations. It is especially important that youth receive age appropriate training in farm safety.

We will work to enhance the safety of farmers by encouraging them to use and, when necessary, replace safety lighting, markings, and reflective devices that are of extreme importance when used on farm machinery. We encourage the use and placement of reflective material and safety lighting on farm equipment that conforms with the American Society of Agricultural and Biological Engineers (ASABE) marking standards.

We encourage all county Farm Bureaus to work with local farmers, elevators, and emergency response personnel to provide adequate grain safety training. Training should include information pertaining to safe grain handling as well as grain emergencies.

**92. FOOD LABELING**

We will support:

1. Promotion of increased use of nutritional information on food labels.
2. Proper labeling of foods, fibers, and other agricultural products.
3. Establishing criteria for a certification process and corresponding legislation for country of origin labeling. The process should support farmer self-certification of origin of livestock; operate under a presumption of domestic origin; and not be financially burdensome to farmers in establishing record keeping criteria.
4. Development of a "U.S. Product" label for products that are originated, produced, and processed in the U.S.
5. A voluntary labeling and/or traceability system for identity-preserved agricultural and food products that is based on a clear and factual certification process in order to ensure the health, safety, and integrity of the product, and enhance the ability of the farmer to capture a value-added return.
6. Voluntary labeling of biotech or non-biotech products when an approved certification process is in place including:
  - A. The development of a consumer-friendly icon or label indicating presence of genetically modified materials in food.
  - B. Positive labeling of biotech products that is science-based, truthful, and not misleading.
7. The science-based labeling policies of U.S. Food and Drug Administration (FDA), including:
  - A. No special labeling unless a food is significantly different than its traditional counterpart, or where a specific constituent is altered (e.g., nutritionally or when affecting allergenicity).
  - B. Voluntary labeling using statements which are truthful and not misleading.
8. Vigorous enforcement of FDA food labeling guidelines for domestic and imported products.
9. Enforcement of federal statute that specifies commodities at a farmer's market in Illinois must disclose the address of the farm where each product is produced.

We will oppose:

1. Negative labeling of food products as being derived from the use of biotechnology.
2. Labels that state or imply organic food is superior to traditional agri-food products or that imply negative consequences of consuming non-organic foods over organic products.

- 1 3. The use of "all natural" and "GMO free" synonymously with "organic" as a way to avoid  
2 farmer certification as an organic grower.  
3  
4  
5

6 **93. FOOD QUALITY PROTECTION ACT**  
7

8 The Food Quality Protection Act (FQPA) provides the foundation for ongoing approval of  
9 substances used in food and agricultural production. It is imperative that agricultural groups  
10 ensure the FQPA is being reviewed and implemented as originally intended.  
11

12 The U.S. Environmental Protection Agency (EPA) must:

- 13 1. Commit to use science, as intended by Congress, in fulfilling the FQPA mandate.
- 14 2. Establish a fair and transparent decision making process.
- 15 3. End the practice of using unduly conservative end points, safety factors, and default  
16 assumptions.
- 17 4. Give higher priority to making scientific decisions rather than completing final tolerance  
18 reassessments by statutory deadlines. Sound science requires good data and valid  
19 methodologies, which require time to develop.
- 20 5. Avoid removing uses that pose theoretical risk based on unreasonable, worst case  
21 assumptions.
- 22 6. Abandon the idea of wholesale revocation of tolerances for the organophosphate  
23 insecticides.
- 24 7. Develop proposed policies and methods for risk allocation, and submit them for public  
25 notice and comment review.
- 26 8. Redress the current resource imbalance between tolerance reassessment and new  
27 chemical/new use registration and accelerate the pace of making decisions on new  
28 products and uses.
- 29 9. In the event of registration cancellation, allow time for pesticide users to make a  
30 reasonable transition to alternative products.  
31  
32  
33

34 **94. FOOD SAFETY**  
35

36 We support:

- 37 1. Actively implementing a communications strategy on food safety issues to provide  
38 accurate information to the media, to educate the public, and to raise public awareness of  
39 the actions farmers are taking to produce a plentiful, high quality supply of food at fair  
40 prices.
- 41 2. Measures to improve food inspection and safety through the United States Department of  
42 Agriculture (USDA) Inspection Service to assure consumers of a safe food supply. These  
43 measures should reinforce consumer confidence while being cost effective.
- 44 3. Protection of our food supply by requiring that imported food products be subjected to the  
45 same high safety standards and testing as food produced in the United States.
- 46 4. Consumer education through labeling regarding safe cooking and storage procedures.
- 47 5. National uniformity in pesticide residue standards. Consideration should be given to the  
48 benefits of crop protection products.
- 49 6. The concept of negligible risk rather than zero tolerance.
- 50 7. Cooperative efforts with food processors, chemical companies, governmental agencies,  
51 scientists and others who are responsible for the food supply of our nation to provide  
52 factual information on the safety of our food supply.
- 53 8. Open communication, not confrontation, with responsible environmental groups.  
54  
55

- 1 9. The use of modern technology in the processing and handling of food to assure food
- 2 safety and promote consumer confidence in the food supply.
- 3 10. USDA as the federal agency responsible for food inspection and safety.
- 4 11. National (USDA) and state food inspection programs that guarantee adequate inspectors
- 5 and funding for businesses in both domestic and imported food products.
- 6 12. The establishment of a USDA-approval process for state-inspected slaughter and
- 7 processing plants that allows them to ship interstate.
- 8 13. Immediate and longer-term actions by USDA and the Department of Homeland Security
- 9 (DHS) to raise the priority of, and resources devoted to, federal safety and inspection
- 10 services, including: the Food Safety Inspection Service (FSIS), Animal and Plant Health
- 11 Inspection Service (APHIS), and the Foreign Agriculture Service (FAS).
- 12 14. The establishment of voluntary guidelines which minimize microbial food safety hazards
- 13 for fresh fruits and vegetables. The guidelines should:
- 14 A. Be based on science.
- 15 B. Remain generic in nature, not commodity specific, to accommodate the diversity of
- 16 the fresh fruit and vegetable industry.
- 17 C. Be implemented in a manner that does not impede our ability to export.
- 18
- 19
- 20

## 21 95. HEALTH CARE

### 22 Rural Health Care Quality and Accessibility

23 We support:

- 24 1. Increasing awareness of the health care resources available to rural populations.
- 25 2. Providing additional health care resources where needed.
- 26 3. Efforts to direct state funding to medical schools to train additional qualified family
- 27 physicians who will practice medicine in rural areas.
- 28 4. Residency programs to provide post-graduate family physician and primary care training
- 29 away from major metropolitan-based medical training centers.
- 30 5. Programs and incentives to encourage doctors, nurses, and other health care
- 31 professionals to practice in rural Illinois.
- 32 6. The development and implementation of programs to assess rural hospital programs, rural
- 33 health care facilities, and alternative methods of delivering rural health care.
- 34 7. Efforts to develop mobile medical equipment and facilities to bring basic health care
- 35 services to rural areas of the state.
- 36 8. Adequate ambulance service in all rural areas.
- 37 9. State regulations to allow the development of limited service hospitals to meet emergency
- 38 care and other needs where the market will not support a traditional full-service hospital.
- 39 10. Legislation that provides exemptions to new state and federal regulations for volunteer fire
- 40 departments and ambulance services.
- 41 11. The maximum possible use of the private sector in providing health care.
- 42 12. Increased funding and improved delivery of mental health services to rural populations.
- 43 13. Exemptions in the two Emergency Medical Technician (EMT) rule to allow rural
- 44 ambulances to proceed to the scene of an emergency call.
- 45 14. Granting continuing education credit to EMTs for their time spent responding to
- 46 emergency calls.
- 47 15. The expansion of the size and scope of the Rural Nurse Practitioner Scholarship Program
- 48 (RNPSP).
- 49 16. An increase in state appropriations for programs that allow for recruitment, training, and
- 50 retention of additional health care professionals to serve rural counties of Illinois.
- 51
- 52
- 53
- 54
- 55

1 We will:

- 2 1. Encourage county Farm Bureaus to host or sponsor community forums of interested
- 3 professional and lay groups to assess rural health care and facilities in their county.
- 4 2. Encourage county Farm Bureaus to host or sponsor rural health and awareness activities
- 5 including making screening and testing available to their members.
- 6 3. Continue to support the Rural Illinois Medical Student Assistance Program (RIMSAP) in its
- 7 efforts to provide medical practitioners for rural communities in Illinois. We encourage
- 8 expansion of that program to meet the changing health care needs of rural Illinois.
- 9 4. Encourage the American Farm Bureau Federation to place a higher priority on its
- 10 continuing study of the problems of the delivery of health care services in the United
- 11 States.
- 12 5. Support an Agricultural Physicians and Nursing Program that would educate health care
- 13 professionals in dealing with agricultural accidents and injuries.
- 14 6. Work with the Illinois Department of Public Health to reinstate and maintain all levels of
- 15 Emergency Medical Technician (EMT) training and testing at convenient locations
- 16 throughout the state as administered prior to the elimination of EMT basic level testing in
- 17 Illinois. This will ensure that adequate volunteer services can be retained as a Basic Life
- 18 System (BLS) and minimize additional mandatory training placed on Emergency Medical
- 19 Technician Basics (EMT-B). Additional unfunded mandates will impose hardships on the
- 20 rural volunteer emergency ambulance services. The state of Illinois should look at ways to
- 21 provide funds for any additional mandates.
- 22 7. Encourage funding to rural ambulance services to increase their ability to employ
- 23 additional certified Pre-Hospital Registered Nurse (PHRN), strengthening their rural
- 24 emergency response and treatment capabilities.
- 25 8. Work to establish a unified EMT and Fire Service Training/Cadet program in which high
- 26 school students who meet the requirements of the State of Illinois and of the program are
- 27 able to serve in rural areas.
- 28 9. Support the concept of providing health insurance through the market place by allowing
- 29 portability including insuring pre-existing conditions.
- 30

### 31 **Payment for Health Care Services**

32 We support:

- 33 1. Allowing Medicare recipients to purchase private health care plans that are actuarially
- 34 equivalent to the current Medicare plan. The plan would receive a payment from Medicare
- 35 to cover some or all of the costs of the premium.
- 36 2. Incentives which could be provided to Medicare recipients to allow them to participate in
- 37 private or alternative plans.
- 38 3. Efforts to eliminate or significantly reduce cost shifting from Medicaid and Medicare to
- 39 individuals and third party payers.
- 40 4. Privately funded optional care delivery systems such as Health Maintenance
- 41 Organizations (HMO's) and Preferred Provider Organizations (PPO's).
- 42 5. Efforts to encourage the medical profession to accept Medicare assignments. Rural and
- 43 urban hospitals should be reimbursed equally for providing services to Medicare and
- 44 Medicaid patients.
- 45 6. Relaxation of state and federal mandates which require that certain provisions be included
- 46 in all health insurance policies. Consumers should be given choices as to what provisions
- 47 are included in their health insurance programs.
- 48 7. Further expansion of medical savings accounts that would qualify for a tax credit to allow
- 49 individuals and their employees to set aside money in anticipation of future health care
- 50 costs.
- 51 8. An increase in the limit of the contribution amount for all health savings accounts.
- 52 9. Consideration of a voluntary regional insurance purchasing cooperative to permit
- 53 individuals and small companies to receive the same price advantages that corporations
- 54 receive.
- 55

- 1 10. Efforts to simplify and make uniform all insurance forms to reduce the cost of processing.  
2 11. Efforts to detect fraud and abuse of Medicare and Medicaid. We encourage swift and  
3 vigorous prosecution of those who are found guilty of defrauding these programs.  
4

5 We will seek legislation to allow non-penalty and tax-free transfers from IRAs to health savings  
6 accounts for major medical emergencies.  
7

8 We urge repeal of the Patient Protection and Affordable Care Act, and support a more market  
9 oriented system of health care delivery.  
10

11 We oppose:

- 12 1. Mandated employer-provided health insurance.  
13 2. Any movement to a single-payer health care system.  
14 3. All tax increases to solve the Medicare problem.  
15 4. Any further tightening of Medicare provider reimbursement.  
16 5. Increasing Medicaid eligibility, in an effort to have national health care reform, that would  
17 result in increased cost shifting to the states.  
18

### 19 **Health Care Delivery Cost**

20 We support:

- 21 1. Programs to reduce the inflation in health care costs.  
22 2. The development and implementation of programs to provide incentives for consumers to  
23 practice wellness and disease prevention.  
24 3. Tort reform to reduce the practice of defensive medicine (i.e. redundant, excessive or  
25 unnecessary testing primarily for purposes of liability concerns rather than diagnostic  
26 purposes).  
27 4. Every possible effort to affect cost management while providing accessible high quality  
28 health care.  
29 5. State and federal efforts to reduce medical malpractice insurance costs, including  
30 limitations on certain punitive and non-economic damage awards, pre-filing mediation  
31 boards, and peer review.  
32 6. The use of innovations such as surgical centers or outpatient facilities to allow consumers  
33 to opt out of expensive hospital costs when they are unnecessary.  
34 7. The development of an aggressive education-information program for health care  
35 consumers to assist them in selecting the most cost-effective health care procedures.  
36 8. Encouragement of regional hospitals to specialize in specific treatment areas with shared  
37 access to eliminate unnecessary duplication of equipment and personnel.  
38 9. A periodic review of state regulations and licensing requirements for hospitals and medical  
39 professionals to determine the appropriateness of the regulations and licensing  
40 requirements in light of changes in the health care delivery system.  
41 10. Efforts to allow consumers to purchase medications that are physician prescribed, as  
42 opposed to having to accept a substitute, in order to receive any reimbursement from their  
43 insurance carrier.  
44  
45  
46

### 47 **96. NUTRITION**

48  
49 We support:

- 50 1. USDA efforts to expand the use of dietetically wholesome and nutritious foods in all school  
51 meals and other nutrition programs and shall not be limited to locally-grown or organic  
52 production.  
53 2. Renaming high fructose corn syrup to corn sugar.  
54  
55

- 1 3. Greater flexibility with the National School Lunch and Breakfast programs to ensure local
- 2 school districts are able to determine how to meet the nutritional needs of their students.
- 3 4. Equal access of pasteurized dairy products, including whole milk, by the USDA national
- 4 school lunch program and by the armed forces.
- 5

6 We oppose:

- 7 1. Financial penalties on local school districts for serving meals that do not meet current
- 8 federal mandates in the National School Lunch and Breakfast programs.
- 9

## 12 97. PUBLIC AID

14 We support:

- 15 1. Public aid based on individual needs, but will not support public aid programs so lucrative
- 16 that there is an economic advantage in becoming a recipient.
- 17 2. Greater uniformity in residency requirements and relative levels of payment among the
- 18 states in all categories of public aid.
- 19 3. More careful supervision of welfare payments at the local level.
- 20 4. Use of the Supplemental Nutrition Assistance Program (SNAP) funds for only those foods
- 21 that are dietetically wholesome and nutritious and shall not be limited to locally-grown or
- 22 organic production.
- 23 5. Legislation requiring able-bodied recipients to work in order to be eligible for receipt of
- 24 public aid. Such work could include work on public or civic projects.
- 25 6. Shifting responsibility of public aid programs from the federal to the state government
- 26 through the use of block grants.
- 27 7. The requirement of photo IDs on all LINK cards issued through the State of Illinois that
- 28 must be presented at the time of purchase.
- 29 8. Efforts to increase Regional Food Banks' proportion of state and federal public aid funds
- 30 for food and nutrition assistance programs.
- 31 9. Limiting what items can be purchased using Temporary Assistance for Needy Families
- 32 (TANF) funds. Items such as alcohol, cigarettes, lotto tickets, and similar items should be
- 33 excluded.
- 34
- 35
- 36

## 37 98. RURAL DEVELOPMENT

39 We will place rural development as one of our highest priorities.

41 We will:

- 42 1. Examine existing private and government rural development programs to determine their
- 43 viability and practicality in improving the rural economy and quality of life in Illinois.
- 44 2. Support allowing the United States Department of Agriculture (USDA) Business and
- 45 Industry Guaranteed Loan Program to make loan guarantees to farmer-owned projects
- 46 sited in urban or urbanizing areas if the locations are the most economically viable to
- 47 return benefits to the rural owners of the project.
- 48 3. Monitor the impact of the new definition of "Micropolitan Areas" and, if negative economic
- 49 effects of rural areas are observed, support changes to that definition to better serve rural
- 50 areas.
- 51 4. Develop a comprehensive program for coordinating rural development activities within the
- 52 state and county Farm Bureau levels.
- 53 5. Support entrepreneurial programs that promote rural economic development including
- 54 business incubator programs in rural high schools.
- 55

- 1 6. Identify specific rural initiatives which our organization will support during the development
- 2 of our comprehensive program.
- 3 7. Urge county Farm Bureaus to take a leadership role in rural development programs and
- 4 activities in cooperation with local business, political and agricultural leaders.
- 5 8. Provide county Farm Bureaus advice and guidance on rural development programs.
- 6 9. Work closely with county Farm Bureaus in the beginning and continuous stages of the
- 7 rural development process, emphasizing the need for community development and
- 8 economic development.
- 9 10. Urge the federal government to fully fund Rural Partners and similar projects. Additional
- 10 federal funds should be provided to these types of projects which use volunteers instead
- 11 of government agencies to solve rural problems.
- 12 11. Support additional USDA Rural Development funding and targeting a greater portion of all
- 13 funds towards stimulating commerce in rural areas.
- 14 12. Support increased USDA Rural Development funding for technical and marketing
- 15 assistance to provide value-added opportunities for farmers.
- 16 13. Support the concept of integrating community services through a single, local economic
- 17 unit (such as a school) through voluntary local initiatives.
- 18 14. Support the designation of a government-based clearinghouse at both the federal and
- 19 state levels to provide one-stop-shopping for information, coordination of all information
- 20 regarding government sponsored or aided rural development programs, and information
- 21 on allied non-governmental programs.
- 22 15. Support state and federal legislation to assist local governments to develop integrated
- 23 Geographical Information Systems (GIS).
- 24 16. Urge local governments, when considering offering incentives for the purpose of spurring
- 25 economic development, to:
  - 26 A. Balance new-growth incentives against those available to existing businesses;
  - 27 B. Make incentives contingent on promised performance;
  - 28 C. Carefully examine program costs relative to the increase in economic activity and
  - 29 tax revenue generated by the development.
- 30 17. Support efforts to develop a program and support funding for low-interest loans to assist
- 31 small business owners in locating and training a successor who would then purchase the
- 32 business and continue its operation.
- 33 18. Encourage landowners to consider the value of allowing easements that improve rural
- 34 services in areas that need the access to better water services.
- 35 19. Work with rural electric cooperatives, telephone cooperatives, and other entities that have
- 36 existing infrastructure and expertise to provide broadband service to all rural areas. We
- 37 encourage these entities to use grants and other sources of monetary assistance to
- 38 provide these broadband services.
- 39 20. Support increased sources and levels of funding for developing and expanding broadband
- 40 telecommunications service to rural areas.
- 41 21. Encourage ongoing studies regarding the quality of life and well-being of rural Illinois
- 42 residents by the state of Illinois, universities and similar interest groups.
- 43
- 44
- 45

## 99. BUSINESS CLIMATE IN ILLINOIS

- 48 To regain a prosperous climate in Illinois in which to live and work, we will support legislation:
- 49 1. Moderating the increasing cost of unemployment compensation.
  - 50 2. Reducing costs involved in providing Worker's Compensation benefits.
  - 51 3. Repealing the prevailing wage laws relating to public works projects. Failing to repeal, we
  - 52 will support legislation reducing the burden of the prevailing wage on public bodies outside
  - 53 of major metropolitan areas.
  - 54 4. Bringing Illinois' minimum wage law in line with federal minimum wage law.
  - 55

1 We support working directly with Illinois' regulatory agencies to improve their efficiency in issuing  
2 the permits for business, economic, and natural resource development projects.

3  
4 We oppose:

- 5 1. The creation of a state or local tax on any financial transaction, including a tax on any  
6 commodity, currency, or securities.
  - 7 2. Efforts to incorporate into law the doctrine of "comparable worth" as it relates to  
8 compensation levels for various types of jobs.
- 9  
10  
11

## 12 **100. COMPENSATION OF PUBLIC OFFICIALS**

13

14 We support legislation to require Congress and the Illinois General Assembly to vote by a roll call  
15 vote on any legislation that would increase the pay or pension of its members.

16  
17 Pay and pension legislation should be voted on as a separate issue and not be tied to unrelated  
18 legislation.

19  
20 We support and encourage legislation that would deny all state employment-related benefits to  
21 any state employee who is convicted under any federal, state, or local law of theft,  
22 embezzlement, or accepting bribes in connection with the employee's service as a state  
23 employee. We support and encourage an amendment to the Illinois Pension Code and/or other  
24 current law to the extent necessary to implement this proposed legislation.

25  
26 We support capping the pension amount that a state legislator can receive regardless of their  
27 length of service or the position(s) they hold with the state after leaving the legislature.

28  
29 We support a requirement for public employees to contribute a greater amount to their public  
30 pensions.

31  
32  
33

## 34 **101. DRIVING UNDER THE INFLUENCE**

35

36 We support vigorous enforcement of the current driving under the influence laws and legislative  
37 efforts to improve those laws.

38  
39  
40

## 41 **102. ELECTIONS**

42

43 We will support:

- 44 1. State legislation modifying the present consolidated election law so that the right of secret  
45 ballot is protected.
  - 46 2. Efforts to shorten political campaigns by moving primaries closer to general elections,  
47 provided county clerks have ample time to prepare for the general election.
  - 48 3. A limit on campaign spending and franking privileges.
  - 49 4. Reform of federal campaign laws to include:
    - 50 A. A strengthening of campaign spending limitation laws to prevent abuse through the  
51 use of "soft money" and independent expenditures.
    - 52 B. An increase in the allowable contribution an individual may make to a candidate.
  - 53 5. Efforts to require that individuals registering to vote, and during voting, to present  
54 government issued photo identification.
- 55

- 1 6. Efforts to further consolidate elections in order to streamline the system and reduce  
2 taxpayers' expense.
- 3 7. Efforts to reduce the number of required election judges from five to three for every  
4 precinct in counties with a population of 250,000 or less should the local election authority  
5 so desire.
- 6 8. Greater oversight and aggressive enforcement of voter fraud of elections by the Illinois  
7 State Board of Elections.

8  
9 We oppose:

- 10 1. The use of the Internet for voting in any local, state, or federal election.
- 11 2. The current Illinois Undervote Notification Law and will support legislation to repeal it.
- 12 3. The use of campaign phone calls that are made to households that are on a do-not-call  
13 list.
- 14 4. Same day voter registration unless the following conditions are met:
  - 15 A. All voter registrations done on Election Day take place at a county designated  
16 government facility.
  - 17 B. A valid photo ID is required at the time of registration.
  - 18 C. Full funding of same day voter registration be provided by the State of Illinois to  
19 ensure this is not a burdensome unfunded mandate on local governments.
  - 20 D. Legislation be passed to require uniform statewide standards for the voter  
21 registration process.

22  
23 We will actively participate in any legislation and other activities that will involve electoral reforms.

24  
25 We support uniform signature requirements, on nominating petitions, regardless of political party,  
26 for candidates seeking public office.

### 27 28 29 30 **103. FARM EQUIPMENT**

31  
32 We will support:

- 33 1. Efforts to clarify and simplify the vehicle code and regulations relating to farm vehicles.
- 34 2. Efforts by Illinois Agricultural Association and county Farm Bureaus to encourage proper  
35 use and law enforcement agencies to enforce proper use of slow moving vehicle (SMV)  
36 emblems.
- 37 3. Efforts to encourage retailers of SMV emblems to provide information with each such sale  
38 informing consumers of regulations regarding the proper use of the SMV and the potential  
39 consequences of improper use.
- 40 4. The development and utilization of standardized specifications for pesticide containers and  
41 equipment connectors for closed pesticide application systems.
- 42 5. Efforts to encourage farm equipment manufacturers and American Society of Agricultural  
43 and Biological Engineers (ASABE) to work together to create an improved system for new  
44 equipment that would better indicate turns, such as sequentially-flashing red arrows,  
45 making them more noticeable for vehicles that are approaching or following.
- 46 6. The development and utilization of standardized wire color/function for any trailer licensed  
47 for over-the-road use or any towed implement of husbandry.

48  
49 We will seek legislation to increase the fine for the misuse of SMV emblems to at least \$75.00 for  
50 the first offense. We encourage law enforcement agencies to enforce the laws pertaining to the  
51 improper use of the SMV emblem.

52  
53 We oppose licensing farm tractors and other implements of husbandry.

54  
55

1 We will develop an SMV and lighting campaign to encourage farmers to update their older  
2 equipment with new amber flashing lights and SMV emblems. This should be accomplished  
3 through educational programs and materials presented by both state and county Farm Bureaus.  
4 We oppose legislation which would forcibly require mandatory lighting on older farm equipment  
5 other than what is currently required by law.  
6  
7  
8

#### 9 **104. FENCE LAW**

10  
11 We support the current fence law which provides for the equitable cost sharing of division fences  
12 between adjoining landowners. When a piece of property is subdivided, it is the obligation of the  
13 developer and subsequent owners to install and maintain a new line fence.  
14

#### 15 **105. FIREARMS**

16  
17  
18  
19 County Farm Bureaus should urge local law enforcement officials and local civic and public  
20 service organizations to promote gun safety programs.  
21

22 We support:

- 23 1. The Firearm Owners Identification Act and reasonable fees for Firearm Owners  
24 Identification cards based on the administrative costs of the program.
- 25 2. The Firearm Concealed Carry Act issuing permits to carry concealed firearms to qualified  
26 Illinois' citizens through an appropriate application process.
- 27 3. Current legislation that requires background checks and waiting periods for handgun  
28 purchases.
- 29 4. Legislation and/or a change to Illinois State Police rules which will allow active duty  
30 personnel residing in Illinois the opportunity to obtain a concealed carry permit without  
31 regard to state of residence.  
32

33 We oppose any type of gun registration program or new, more stringent gun control laws or rules.  
34 Any new commitment in gun control should be made by the strict enforcement of current laws.  
35  
36  
37

#### 38 **106. ILLINOIS BANKING STRUCTURE**

39  
40 We support a banking structure in Illinois that provides for:

- 41 1. An adequate supply of competitively priced credit for all credit worthy farmers.
- 42 2. Competent staff in local banks who understands agriculture and the unique risks with  
43 which farmers must deal.
- 44 3. Fair competition for banks of all sizes and in all locales.
- 45 4. Fair competition with other types of lenders.
- 46 5. Economic decision making that is not concentrated in the hands of a few large financial  
47 institutions.
- 48 6. Constant or a net inflow of capital into the area in which financial institutions are being  
49 acquired, merged or consolidated.
- 50 7. Greater scrutiny of and investigation into anti-trust ramifications and violations in relation  
51 to mergers and other acquisitions.

**107. ILLINOIS DEPARTMENT OF AGRICULTURE**

We support:

- 1. Maintaining the Illinois Department of Agriculture (IDOA) as a stand-alone agency.
- 2. Strengthening the IDOA including its role in regulatory concerns as they apply to agriculture.
- 3. Strengthening Illinois county fairs, the Illinois State Fair, and the DuQuoin State Fair as agricultural expositions.
- 4. Encouraging the State of Illinois to fully fund its portion of premium dollars at Illinois county fairs.
- 5. The establishment of a charitable foundation to solicit donations and sponsorships to grow and improve the Illinois State Fair and the DuQuoin State Fair.
- 6. Encouraging the IDOA and the State of Illinois to put a five-to-10-year plan in place to move the Illinois State Fair up at least one week.
- 7. Maintaining sufficient meat inspectors on staff so as to be readily available and not hinder the ability of local meat lockers to harvest as needed.

**108. INTERGOVERNMENTAL COOPERATION**

We support:

- 1. Expanded use of the Intergovernmental Cooperation Act by units of local government.
- 2. The shared use of buildings, equipment, personnel and programs by units of local government to reduce the cost to each unit.

County Farm Bureaus are encouraged to work with local government officials and other interested parties to increase the level of cooperation among existing local governmental units.

We will work with all interested groups and organizations to identify methods which can be implemented locally to encourage local government cooperation.

**109. JUDICIAL REFORM**

We will support an amendment to the Illinois Constitution permitting downstate judicial districts to choose by referendum between election of judges or appointment of judges from candidates recommended by advisory commissions made up of laymen and lawyers.

We will work with members of the legal profession and legislative bodies on a state and national level to substantially reform the judicial system by addressing issues such as tort reform, attorney contingency fees, incompetent or unqualified judges, and lengthy trials.

We will support efforts to limit the tenure of judges at the local and state level.

We will support efforts to provide adequate information to the public regarding the qualifications of individuals seeking election or retention to judicial office.

1  
2  
3 **110. LAW AND ORDER**

4 We support action to:

- 5 1. Bring about firm, fair, and prompt enforcement of existing laws.
- 6 2. Increase enforcement of existing littering laws.
- 7 3. Provide aid to victims of crime.
- 8 4. Create greater awareness of and increased activity by our members in surfacing, selection  
9 and election of qualified persons who will be capable of administering effective law  
10 enforcement programs.
- 11 5. Require that the County Sheriff and State's Attorney be notified by the State Department  
12 of Corrections when an inmate from their county is released from a state correctional  
13 institution.
- 14 6. Reduce the fiscal impact imposed on local governments related to the increasing of  
15 minimum federal jail standards. Such efforts should relate to providing state and local  
16 government jurisdictions with flexibility to meet minimal care standards for such facilities.
- 17 7. Allow law enforcement officials to seize vehicles used in the commission of a theft  
18 involving agricultural commodities, supplies or equipment.

19 We will support:

- 20 1. Effective enforcement of present laws and the enactment of new legislation where needed  
21 to prevent the illegal production, importation, manufacture, or distribution of narcotics,  
22 marijuana, other drugs, harmful substances, and related paraphernalia.
- 23 2. Work programs for prisoners.
- 24 3. Continued efforts to inform the victim of the impending release of an inmate.

25 We oppose:

- 26 1. The "early release program" as a solution to prison overcrowding.
- 27 2. The use, production and distribution of marijuana for recreational purposes.

28 We will seek legislation to provide for severe and mandatory sentences for crimes committed with  
29 weapons. The defense of one's person or property with a weapon needs to be more clearly  
30 defined legally.

31 We will:

- 32 1. Work with county Farm Bureaus in developing coalitions to address the problems with  
33 methamphetamine production and use.
- 34 2. Encourage vigorous education efforts to inform youth, parents, and others concerning the  
35 harmful effects of substance abuse including the dangers of methamphetamine production  
36 and use.
- 37 3. Work with local, state, and federal officials in addressing the issue of methamphetamine  
38 production and use.
- 39 4. Work with our urban legislators to help educate them on the severity of this problem in  
40 rural areas and the cost to the taxpayer for treating methamphetamine addicts.
- 41 5. Encourage the research and development necessary to produce an economical additive  
42 for anhydrous ammonia to prevent its use for the production of methamphetamine or other  
43 illegal purposes.
- 44 6. Seek legislation imposing stiffer penalties for theft of anhydrous ammonia for  
45 methamphetamine production.

46 We encourage counties to consider the establishment of Juvenile Justice Councils.

## 111. LEGISLATIVE BODIES

We support:

1. Legislation prohibiting members of the General Assembly from receiving remuneration from any taxing body for other than incidental services rendered on a part-time basis.
2. Legislation to provide for a "sunset" of all new state or federal rules issued by departments, agencies, executive order or commissions or explicit reauthorization of those rules at "sunset" which spend tax resources.
3. Limiting the Governor's amendatory veto power to only technical corrections and matters of form.
4. A restructuring of the Illinois legislative redistricting process that will be conducted by an unbiased third party, will not be based on political affiliation and prior election results, and districts will be compact, contiguous, and impartial to party or incumbency. Districts should follow county, township, and municipal boundaries as much as possible.
5. An amendment to the Illinois Constitution that addresses limiting the passage of lame duck legislation and requires a 3/5 vote on all legislation in the second year of a General Assembly session after May 31.
6. Creating term limits on both minority and majority leadership positions within the Illinois House of Representatives and Senate.
7. Creating term limits on all statewide offices and state legislators in Illinois.

## 112. LOCAL GOVERNMENT

26 We support the principle of strong local government with the assignment of responsibility for  
27 government services to that unit of general government which best serves the people and can  
28 economically provide the service.

29  
30 We support maximizing efficiency and eliminating waste in all units of government.

31  
32 We support legislation:

- 33 1. Providing uniform requirements, including the printed full name of the voter, for signers of  
34 all public petitions.
  - 35 2. Permitting consolidation of additional county functions between counties.
  - 36 3. That ensures that any electronic registry of mortgage loan information shall not affect the  
37 current system of recording documents affecting title to real property with the county clerk  
38 or recorder.
  - 39 4. Providing for salaries of all local officials to be set by the appropriate local unit, rather than  
40 by the state legislature.
  - 41 5. Requiring at least 15 percent of registered voters as signers on petitions within any  
42 territory proposed to become a new taxing district or within any area proposed to be  
43 annexed to an existing taxing district.
  - 44 6. Requiring that a referendum to expand a taxing district be approved by a majority of voters  
45 in both the existing district and in the area proposed to be annexed. When a new taxing  
46 district is to be created encompassing both incorporated and unincorporated areas, the  
47 referendum should require approval by voters within the incorporated area and a separate  
48 approval by voters in the unincorporated area.
  - 49 7. Extending the time limit from 30 days to 60 days to get the necessary percentage of  
50 registered voters' signatures on petitions concerning backdoor referendums.
  - 51 8. More clearly defining what issues are appropriate for non-binding advisory referenda for  
52 units of local government.
  - 53 9. Prohibiting individuals from serving concurrently as an elected mayor and an elected  
54 county board member.
- 55

- 1 10. That provides for the absorption, consolidation, disconnection, and dissolution of units of
- 2 local government by front door referendum.
- 3 11. Waiving the residency requirement for the office of Highway Commissioner in a road
- 4 district with a population of less than 500, if and only if, no qualified candidate willing to
- 5 serve the office exists within the township. All other requirements for the office shall
- 6 remain.
- 7

8 We will seek legislation to provide for:

- 9 1. Selection of special district board members by election.
- 10 2. Uniform fiscal years, classification of accounts, budgets and audits for all taxing bodies.
- 11 3. Additional authority for forest preserve districts to sell real estate, including farmland.
- 12 4. A referendum of registered voters in the township or townships to approve the site where
- 13 municipalities propose to annex property for the location of any type of waste disposal
- 14 facility, prison or other entity which could directly affect the lives of people residing in the
- 15 area.
- 16 5. The requirement that any municipality or any other unit of local government considering
- 17 annexation of farmland notify affected landowners by registered or certified mail at least
- 18 30 days prior to the filing of such annexation.
- 19 6. The capability of counties, townships, and special districts to levy impact fees to support
- 20 local services during the time between construction of a project and when tax revenues
- 21 would normally be received and to levy impact fees to support local infrastructure
- 22 improvements in areas of new development.
- 23 7. The elimination of the liability of bonded indebtedness to areas that are annexed and then
- 24 vote by referendum to disconnect from a taxing district which had previously incurred debt
- 25 before the annexation. The annexed and then disconnected territory would only be liable
- 26 for indebtedness occurring while they are a part of the district.
- 27

28 We support:

- 29 1. The shifting of additional responsibilities from the federal government to state
- 30 governments if, at the same time, adequate access is made to the tax structure to allow
- 31 for the financing of such programs by the states and a commensurate reduction is made in
- 32 federal taxes. We will support state and local governments in the development of their
- 33 capabilities to discharge these added responsibilities.
- 34 2. The shifting of responsibilities from the state government to local governments only if the
- 35 state government reduces its taxes proportionately or provides local governments the
- 36 resources to carry out such responsibilities.
- 37 3. Improvements in state agency programs which provide needed training and education for
- 38 local government officials. Such programs should include management and financial
- 39 training related to local government.
- 40 4. Efforts by local government officials, county Farm Bureaus and other organizations to
- 41 increase public participation in the overall functions of local government.
- 42 5. Efforts to ensure that citizens who do not currently live in a library district but wish to
- 43 receive library services can receive equal and affordable access to the public library
- 44 system.
- 45 6. Encouraging local governments to make compensation breakdowns and pension
- 46 sweeteners more readily available to public scrutiny.
- 47 7. Amending the Cemetery Oversight Act, so that the provisions of the law are not overly
- 48 burdensome for cemeteries.
- 49 8. Elected and appointed government officials being held to ethical standards including
- 50 prohibiting nepotism.
- 51

52 We will strongly oppose all efforts to mandate inclusion of areas not currently served by a library

53 district into existing library districts.

55

**113. MANDATED PROGRAMS**

We will oppose state and federal legislation mandating local programs, unless full funding for such programs is provided on a continuing basis.

We will support an amendment to the Illinois Constitution prohibiting the state from mandating programs on local governments and school districts without providing full state funding.

**114. PRIVATE LANDS COOPERATIVE INITIATIVE**

We support development of state laws and policies promoting voluntary and incentive-based private land initiatives to:

1. Encourage economic stability in communities through long-term private land ownership.
2. Enhance on-farm income through recreation-based resource development.
3. Increase community revenue through expanded economic activity.
4. Improve public recreational opportunities on private land.
5. Provide liability protection to landowners.
6. Increase economic activity in depressed rural communities.
7. Promote cooperation between government bodies and private landowners.

**115. PROBATE AND FAMILY LAWS**

We will support:

1. Major reform of probate laws and procedures which will increase the promptness, reduce the cost, and simplify the procedures for settling estates.
2. Revisions to family law that fairly recognize capital cost for purposes of determining net farm income and include allowances for deduction of either depreciation or debt service.

**116. PUBLIC BUILDING ACTS**

We will support legislation further limiting the use of the Illinois Building Authority Act and the Illinois Public Building Commission Act.

**117. PUBLIC EMPLOYEE COLLECTIVE BARGAINING**

We will work to inform our leaders and members of the basic provisions of the current public employee collective bargaining laws in Illinois.

We urge our leaders and members to use various innovative consensus and nonadversarial approaches to resolve public employee disputes to minimize the potential of work stoppages by public employees.

We will cooperate with major public employee and employer groups in the State in pursuit of reasonable solutions to disputes in the public sector.

We will support binding arbitration only when agreed to by both negotiating parties.

1 We will continue to oppose all laws which provide for:

- 2 1. Mandatory membership in any bargaining group, or mandatory financial support of such
- 3 group by non-members.
- 4 2. Strikes by public employees which might jeopardize public health, safety, welfare and
- 5 education.
- 6 3. Inclusion of administrative, supervisory or management personnel in a collective
- 7 bargaining unit.

## 118. SPECIAL SERVICE AREAS

13 We will seek legislation to amend the Special Service Area Law to permit, by petition of at least  
14 10 percent of the voters in the proposed area, the calling of a binding referendum to determine if  
15 a special service area shall be established, if taxes are to be extended, or if certain areas are to  
16 be included in the service area.

18 We will support legislation:

- 19 1. To ensure that special service areas be restricted to providing those services that are not
- 20 ordinarily provided by county government.
- 21 2. Which provides procedures for the dissolution of special service areas.
- 22 3. Which provides that only counties may establish and govern any special service area
- 23 which includes territory not incorporated within a municipality.

## 119. TORT REFORM AND INSURANCE LIABILITY

29 We support:

- 30 1. Coordination of efforts between state and county Farm Bureaus, medical associations,
- 31 insurance organizations, and other organizations for solving the increasing problems of
- 32 cost and availability of liability insurance.
- 33 2. Efforts to reduce the costs of product liability insurance and other important classes of
- 34 liability insurance. Reduction of these costs will benefit the ultimate consumers.
- 35 3. Legislation to help protect landowners and tenants from liability claims made by
- 36 trespassers, licensees, or invitees coming upon the landowners' property and legislation to
- 37 ensure landowners and tenants owe no duty of care to trespassers, regardless of age.
- 38 4. Legislation that will protect the private landowner from liability claims arising from
- 39 conditions or risks created by storms or other natural disasters.
- 40 5. Limitations upon an attorney's contingency fee.
- 41 6. Modification of the law on joint and several liability and comparative negligence to prevent
- 42 inequitable division of compensation from defendants.
- 43 7. Removal of the authority of local units of government to use profits generated from tax-
- 44 created liability protection funds for other purposes.
- 45 8. Development of informational programs to educate our membership and the public
- 46 regarding issues relating to tort reform and the insurance liability crisis.
- 47 9. Laws or regulations absolving farmers from liability claims of environmental pollution:
- 48 A. When complying with federal or state approved label instructions.
- 49 B. When building, managing, or operating livestock facilities according to federal or
- 50 state guidelines such as the Livestock Management Facilities Act (LMFA) and the
- 51 Concentrated Animal Feeding Operation (CAFO) rules.
- 52 10. Legislation at the state and federal level to place reasonable limitations on attorney's fees
- 53 generated by class action lawsuits.
- 54 11. Efforts to limit punitive damages in odor lawsuits.

- 1 12. An amendment to the Recreational Use of Land and Water Areas Act in order to limit the  
2 liability of landowners who voluntarily open their land for educational and recreational  
3 activities at no charge while maintaining the landowner's ability to determine who to allow  
4 on their property.
- 5 13. Legislation that would encourage liability litigation to be filed and commenced in the  
6 jurisdiction where the medical service was provided.
- 7 14. The expansion of the restitution language that will allow the recovery of both out-of-pocket  
8 expenses and lost wages.
- 9 15. Requiring the cost of defense to be paid by the complaining or suing parties and their  
10 representatives in the event the defendant prevails.
- 11 16. Legislation to minimize the liability of farm equipment drivers and/or owners when Illinois  
12 Department of Transportation design standards force their equipment to travel across the  
13 center line.

14  
15 We will support at the state and federal level and will urge the American Farm Bureau Federation  
16 to support a "Voluntarism Protection Act" to grant immunity from personal civil liability under  
17 certain circumstances to volunteers, officers and directors working in behalf of non-profit and  
18 charitable organizations and government.

19  
20 We will seek legislation to require the payment by the plaintiff or plaintiffs of costs and reasonable  
21 attorney fees incurred by a prevailing defendant in any nuisance action in which a proposed farm  
22 (as defined in the Farm Nuisance Suit Act) or expansion of an existing farm which is alleged to be  
23 a nuisance.

24  
25  
26

## 27 **120. TRESPASS, VANDALISM, AND PRIVATE LAND ACCESS**

28  
29

We will support:

- 30 1. Encouraging courts to punish vandals by requiring them to clean up and repair their own  
31 vandalism at their own expense or perform some other constructive work. We urge  
32 judges, when setting sentences, to require reimbursement of Crime Stoppers or similar  
33 reward programs, as a part of the sentence.
- 34 2. Legislation to protect landowners and tenants from property seizures, claims, and costs  
35 caused by unauthorized activities of trespassers and licensees entering upon and using  
36 the landowners' property.
- 37 3. Efforts, including legislation and working with law enforcement agencies and prosecutors,  
38 to increase the enforcement of criminal trespass laws.
- 39 4. Legislation specifying that, in criminal damage to property cases where the damage was  
40 caused by the unauthorized operation of a vehicle on private property, the threshold of  
41 felony status be elevated from its current \$300 to a level better suited to the crime and one  
42 that would help to remove the law enforcement community's hesitancy to prosecute those  
43 violators. In such cases, a minimum fine should be established with required restitution to  
44 the victim for property damages caused and the violator's license should be suspended for  
45 six months.
- 46 5. Legislation linking criminal violations of the Illinois Vehicle Code and acts of criminal  
47 trespass or criminal damage to property to the driver's license record of anyone convicted  
48 of these crimes for the unauthorized operation of a motor vehicle on private property.
- 49 6. Legislation creating an owner responsibility provision in law that obligates the owner of a  
50 vehicle to compensate for damages caused to private property by the use of the vehicle  
51 on that property without the landowner's authorization unless the vehicle was stolen or the  
52 vehicle's owner took reasonable precautions against misuse of the vehicle.

53  
54  
55

- 1 7. Efforts to educate law enforcement officials and the general public – especially youth –
- 2 about the property damage caused by the unauthorized operation of vehicles on private
- 3 property and the liability and penalties for any resulting property damage.
- 4 8. The development and dissemination of programs and materials on private property rights
- 5 and the associated portions of trespass and criminal law. We encourage county Farm
- 6 Bureaus to pursue similar efforts on the local level.
- 7 9. Efforts to educate farmland owners and farmland operators about their legal rights and
- 8 responsibilities relating to trespass; also, efforts to educate them about insurance
- 9 coverage relating to liability and property damage caused through trespass. We
- 10 encourage county Farm Bureaus to pursue similar efforts on the local level.
- 11 10. Efforts to establish riding areas for ATVs and other off-highway vehicles and efforts to
- 12 generate revenues for that purpose from those who use the vehicles for recreation.
- 13 11. Efforts to make it clear that persons going to or from rivers, streams, and bike trails over
- 14 another's land or hunting on another's land without the owner's or rightful occupant's
- 15 specific permission, without regard to the presence of any posted notices, are trespassers
- 16 for the purposes of determining liability of a landowner for any injury which might occur to
- 17 the trespasser.
- 18 12. Legislation that will require owners of recreational trails and their facilities to compensate
- 19 owners of land adjacent to the trail or facility for any property damage, theft, littering,
- 20 and/or vandalism caused by users of the trail or facility except where the actual
- 21 perpetrator can be identified and make restitution.
- 22 13. Efforts to educate farm owners and operators about their legal rights as they pertain to
- 23 utilities and governmental or private surveying companies. We would encourage all
- 24 surveyors to notify affected landowners and use public property whenever possible.
- 25 14. Efforts to educate farm owners and farmers about their legal rights as landlords or
- 26 managers of residential properties.
- 27 15. Landowners being an additional named insured for all government and public utility project
- 28 work that is being done on private property.
- 29 16. Efforts to enforce regulations on hot air balloons regarding their potential trespass on
- 30 private property and their potential for endangering livestock.
- 31
- 32
- 33

## 121. FEDERAL ESTATE TAXES

We will support:

- 37 1. The repeal of federal estate taxes while still retaining a stepped up basis at the time of
- 38 inheritance.
- 39 2. The exemption from federal estate taxes for heirs who are actively farming a farm property
- 40 which is restricted by a voluntary conservation easement.
- 41 3. Elimination of the \$850,000 ceiling and limitation on the percentage of the total value of
- 42 the estate allowed in determining the existing exemption under Internal Revenue Code
- 43 2032-A for agricultural productive value.
- 44 4. Increasing the maximum gift tax exclusion per recipient to \$50,000 per year.
- 45

We oppose any reduction in the current federal estate tax exemption. Until repeal becomes politically feasible, we support an increase in the exemption to \$10 million to ease the movement of farms and small businesses from one generation to the next. The exemption should be indexed for inflation.

## 122. PROPERTY TAX ADMINISTRATION

We will seek legislation allowing by local referendum the dissolution of consolidated township assessing districts.

We will support legislation to improve the administration of local assessments including:

1. Provisions to specifically define property as real estate or personal property on an equitable basis statewide. We will continue to work with the State Department of Revenue (DOR) and local assessing officials on specific problems in this regard.
2. A change in the method of valuing mobile or manufactured homes for assessment and collection of taxes from the Mobile Home Local Services Tax Act (privilege tax) to an Ad Valorem Tax (measured by value).
3. Reduction of costs for property assessment publications by allowing counties to utilize online publication in lieu of printed publication. This type of publication would be in addition to the required individual property assessment mailings to property owners.
4. Allowing counties to eliminate the office of Township Assessor by a county-wide referendum in which a majority of voters in the county and a majority of voters in the majority of townships approve.

We will seek uniform and equitable implementation of the Farmland Assessment Law, in cooperation with county Farm Bureaus.

We will:

1. Work with county Farm Bureaus to inform members of the limits of their responsibilities in providing information to assessing officials.
2. Continue to cooperate with the DOR and the Association of Assessing Officials in developing educational materials for use by taxpayer groups.
3. Strongly urge the members of the Illinois General Assembly not to change the present formula for calculating the assessed value of farmland.
4. Support the appointment of Supervisors of Assessment versus elected Supervisors of Assessment.
5. Encourage county Farm Bureaus, in cooperation with local officials, to periodically hold information/education meetings for taxpayers.
6. Work with the DOR and the Association of Assessing Officials to achieve uniformity in depreciation (for assessment purposes) of all depreciable agricultural facilities.
7. Work with the Illinois DOR and the Association of Assessing Officials to encourage the assessment of all qualifying agricultural property, regardless of size, under the farmland assessment law.
8. Work with appropriate state agencies and other state officials to develop Conservation Management Plan rules that permit landowners to apply for a plan without submitting overly burdensome and prohibitive proposals.

We oppose legislation removing either the State DOR or the local Board of Review from the administrative process of approving or denying property tax exemptions. The DOR should continue to have final authority.

46  
47  
48  
49  
50

## 123. SALES TAX

We will seek legislation to:

1. Remove the Retailer's Occupation Tax (ROT) and the Use Tax from sales of LP gas used primarily in production agriculture.

- 1 2. Remove the ROT and the Use Tax from sales of feeds, including hay when sold by
- 2 farmers to feed livestock including horses and poultry for marketing, or for producing dairy
- 3 products or eggs or other consumer by-products.
- 4 3. Eliminate the practice of charging state sales tax on motor fuel.
- 5

6 We support agricultural exemptions in Illinois state sales tax codes.

7

8

9

## 10 **124. STATE AND LOCAL FINANCE**

11

12 The overall tax structure for state and local governments in Illinois should include a state income

13 tax, a moderate local real property tax, sales tax, motor fuel tax, cigarette tax, liquor tax and other

14 special taxes.

15

16 We will analyze any proposed increase in the state sales tax rate as to the effect such an

17 increase would have on the economy and competitiveness of the State of Illinois in relation to the

18 sales tax rates imposed by neighboring states and take the appropriate action on such proposed

19 increase.

20

21 We will support legislation:

- 22 1. Providing property tax relief through a combination of state revenue surpluses and various
- 23 state-wide taxes.
- 24 2. Including townships and road districts along with counties and municipalities in the formula
- 25 for the distribution of the Local Government Distributive Fund.
- 26 3. Extending to two years the time landowners have to disconnect their property from any
- 27 special purpose taxing district formed or expanded without a referendum and which does
- 28 not provide emergency life-sustaining services. During that period, all property tax
- 29 revenues collected by the district from landowners within the new taxing area should be
- 30 held in escrow and refunded or credited to those taxpayers if they choose, by referendum,
- 31 to disconnect.
- 32 4. Extending the time limit from 30 days to 60 days to get 10 percent of registered voters'
- 33 signatures on petitions concerning backdoor referendums.
- 34 5. Providing for restricted and specific criteria in order to qualify areas for creation of Tax
- 35 Increment Financing (TIF) districts by municipalities and counties in order to reduce
- 36 negative fiscal impacts on existing businesses and local governments, including schools.
- 37 Further, we believe the economic advantages of the new business or production alone
- 38 should be enough to justify expansion or location in an area.
- 39 6. Limiting the tort immunity levies to the actual costs incurred by the local taxing bodies. We
- 40 support vigorous enforcement of current laws and regulations specifying use of these
- 41 funds.
- 42 7. Allowing local citizens to establish a maximum tax rate lower than the statutory maximum
- 43 rate when creating a new taxing district by referendum.
- 44 8. That requires a referendum ballot question which proposes the creation of a new taxing
- 45 body also state the statutory maximum tax rate and debt level for the proposed new taxing
- 46 district.
- 47 9. Allowing a Fire Protection District to retain the real estate taxes for a period of 10 years,
- 48 whenever a territory is disconnected from a Fire Protection District and annexed to a
- 49 municipality.
- 50 10. Providing that taxing districts shall give public notice of, and hold a public hearing on, their
- 51 intent to annex property.
- 52 11. Limiting taxing districts, including school districts, from incurring future bonded
- 53 indebtedness, without a referendum, where such bonds are to be repaid with property tax
- 54 revenue.
- 55

- 1 12. To require referendums which authorize any new real estate tax levy to state the
- 2 maximum statutory tax rate in the referendum question.
- 3 13. To allow all taxing bodies to reduce their levy after the levy has been submitted to the
- 4 county clerk.
- 5 14. To allow impact fees to be imposed on new residential construction for school capital
- 6 needs.
- 7 15. To allow townships that are currently under the Illinois Municipal Retirement Fund (IMRF)
- 8 program to opt out.
- 9 16. To exempt undeveloped farmland in unincorporated areas from municipal local
- 10 improvement taxes and fees.
- 11 17. Requiring that any tax credits be based on fiscal policy that promotes long-term economic
- 12 stability and prosperity.
- 13 18. To amend the Open Space Lands Acquisition and Development Act to allow some of the
- 14 revenues funding the act to be used to provide maintenance and improvement to existing
- 15 state parks.
- 16 19. Amending the Illinois County School Facility Tax Act to require school districts to issue a
- 17 public statement of intent a minimum of 30 days prior to the election.
- 18 20. Amending the Illinois County School Facility Tax Act to ensure that counties benefiting
- 19 from the School Facility Tax Act would not be prevented from, or placed at a disadvantage
- 20 for, receiving school construction dollars from the state.
- 21 21. Amending the Illinois County School Facility Tax Act to require that a portion of the money
- 22 collected is used in property tax relief if the school district(s) has outstanding bonds for
- 23 capital purposes.
- 24 22. Amending the Illinois County School Facility Tax Act to require a sunset clause of 20 years
- 25 or re-approval by voters to continue the tax.
- 26 23. Requiring local governments to publicly disclose information on tax increment financing
- 27 districts including the locations of the districts, funds generated, use of funds, and any
- 28 contractors.
- 29 24. That calls for a more stringent audit of all state expenditures.
- 30 25. Eliminating the Illinois estate tax, but until that is accomplished, support using the
- 31 corresponding federal exclusion amount, but not less than \$5 million and having a tax rate
- 32 structure no greater than the maximum 16 percent currently in law.
- 33 26. To impose a tax on the owner or lessee of non-renewable natural resources, excluding oil
- 34 and gas, upon the severance and production of that resource. A significant portion of the
- 35 tax revenue shall be distributed to the county of origin.
- 36 27. Maintaining and creating property assessment levels that encourage the creation and use
- 37 of grassed-backed terraces, grassed waterways, filter strips, two stage ditches,
- 38 bioreactors, and other approaches to improve water quality through these practices.

39  
40 We will seek legislation:

- 41 1. Prohibiting extension of real estate taxes on farmland by special taxing districts which
- 42 provide non-essential services such as library districts, park districts, and forest preserve
- 43 districts.
- 44 2. To change the back door referendum to a front door referendum in the library code that
- 45 relates to annexation of contiguous territory.

46  
47 We will work to form a coalition of statewide associations and other interested and like-minded

48 parties to work for tax reform to reduce the reliance on real estate taxes.

49  
50 We will oppose legislation:

- 51 1. Imposing additional taxes or increases in tax rates upon property unless approved by a
- 52 referendum of local voters at a primary or general election. We oppose the use of a
- 53 backdoor referendum.
- 54 2. Imposing a state property tax.

55

- 1 3. Increasing exemptions from real estate taxation.
- 2 4. That allows the use of (TIF) or enterprise zones for production agriculture.
- 3 5. Authorizing non-refundable fund transfers beyond those allowed in the standard budgeting
- 4 process or via voter approval.
- 5 6. Creating a gross receipts tax or value-added tax by the State of Illinois.
- 6 7. Selling or leasing the Illinois State Lottery.
- 7 8. Authorizing the transfer of funds from dedicated and special state funds for any reason
- 8 beyond their original intended purpose.
- 9 9. Enacting a quarter-cent sales tax on purchases throughout the Chicago metropolitan area,
- 10 as defined by the counties in the Regional Transportation Authority Service area (Cook,
- 11 DuPage, Kane, Lake, McHenry, and Will Counties).
- 12

13 We oppose:

- 14 1. A severance tax on current, low production oil and gas wells. We believe that if there is a
- 15 severance tax on new, high capacity oil and gas wells it should be at a level that will not
- 16 impede the development or operation of those wells.
- 17 2. A constitutional amendment to remove or permit removal of the present 8 to 5 state
- 18 income tax ratio between corporations and individuals.
- 19

20 We urge county Farm Bureaus to implement comprehensive local programs to determine and to

21 critically evaluate how and from what sources local government revenues are being raised and

22 how these funds are being spent. We will assist county Farm Bureaus in such programs.

23

24 We encourage the Illinois General Assembly to undergo a more comprehensive and diligent

25 method of prioritizing appropriations to meet the current needs of its citizens.

26

27 We support speeding up tax appeal decisions that affect local government budgets.

28

29 We believe the state of Illinois should meet its responsibilities in regards to funding those

30 organizations and programs for which funds have been appropriated in the state budget.

31

32  
33

## 34 125. STATE INCOME TAX

35

36 We prefer a flat rate state income tax, and support deductions and credits benefiting agriculture

37 and agricultural processes, and an exemption at some realistic level.

38

39 We support the State of Illinois following Federal Depreciation rules regarding bonus

40 depreciation.

41

42  
43

## 44 126. TAX REFORM

45

46 Higher federal marginal income tax rates are inconsistent with economic growth and lower

47 interest rates. We support continued retention of the indexing of income taxes.

48

49 We will seek:

- 50 1. A reasonable Investment Tax Credit program and provision for the use of all carryover
- 51 investment tax credits.
- 52 2. Immediate provisions to allow individuals who purchase their own health insurance an
- 53 exemption or deduction for health insurance costs.
- 54 3. Further reductions in capital gains tax and/or indexing capital gains tax for inflation.
- 55

- 1 4. Establishment of a "Farmer Savings Plan" (FSP) that allows for an allocation of income  
2 into a tax exempt FSP for emergencies. Plan contributions should include earnings and  
3 gains from a farm operation's proceeds and capital items. Contributions should be tax  
4 deductible at the time of contribution and be taxed at the time of distribution.
- 5 5. An exemption allowing the cash rental of farmland to a family partnership or corporation  
6 without the 15.3 percent self-employment tax on the rents.
- 7 6. A modification of federal tax code 1031 like-kind exchanges that:  
8 A. Relaxes the requirements on the reinvestment of the proceeds from agricultural  
9 land sales.  
10 B. Changes from 45 days to six months the time allowed to identify a non-taxable  
11 exchange, and from six months to one year the time allowed to close and receive  
12 property.
- 13 7. Tax incentives for persons who sell or lease property, including but not limited to land,  
14 machinery, and other farm assets to beginning farmers.
- 15 8. Legislation which eliminates self-employment tax on Conservation Reserve Program  
16 (CRP) payments.

17  
18 We will support the repeal of the amendments made to the 1099 IRS reporting in the Patient  
19 Protection and Affordable Care Act.

20 Farmland taken through eminent domain, or as a result of the threat of eminent domain, which  
21 has been owned by the current owner or his immediate family for 10 or more consecutive years  
22 should be exempt from capital gains taxes on that property.

23  
24 We oppose any tax and/or government-imposed user fee on commodity futures or options  
25 transactions.

26  
27 We support the investigation and complete study of a federal flat rate income tax proposal to  
28 show its possible long-term effects on production agriculture.

29  
30 We support the extension of the Federal Bonus Depreciation component of the Job Creation and  
31 Worker Assistance Act of 2002.

32  
33 We support the unrestricted use of cash accounting regardless of the level of gross receipts of  
34 the primary farm or the cumulative gross receipts of all businesses related to the primary farm.

## 35 36 37 38 **127. TRANSPORTATION**

39  
40 We support development of a long-range national transportation policy that views transportation  
41 as a holistic system serving the needs of both passengers and freight across all modes and  
42 recognizes the importance of connectivity between modes. It should encourage exploration of  
43 public/private partnerships and be designed to support global competitiveness while developing  
44 the most economical and energy efficient methods of meeting future transportation needs.

### 45 46 **Land Use**

47 We will support:

- 48 1. Regulations which:  
49 A. Provide improved noxious weed and brush control by state and local road  
50 authorities on the full width of highway rights-of-way.  
51 B. Maintain safe levels of visibility.  
52 C. Protect farmers' crops from unwarranted or careless spraying.  
53 D. Ensure that ditch and roadside vegetation maintenance practices do not impair  
54 drainage to or from adjoining farm fields.

- 1 E. Preserve vegetative cover adequate to prevent soil erosion on roadsides and in  
2 ditches.
- 3 2. Enforcement of noxious weed and brush control by railroad authorities on railroad rights-  
4 of-way, including the use of a soil conserving cover crop whether the railroad is in  
5 operation or abandoned.
- 6 3. Giving counties the power to levy a fine of \$500 per acre of railroad rights-of-way where  
7 noxious weeds are not eradicated or controlled.
- 8 4. Enforcement of drainage laws and regulations on railroad rights-of-way.
- 9 5. Oversight of railroad construction projects and design standards by appropriate  
10 government agencies to minimize disturbance to adjoining farmland and farming  
11 operations and to adequately protect or repair drainage and drainage systems.
- 12 6. Efforts to ensure that highway construction and improvement projects do not cause  
13 serious, adverse impact to drainage nor cause erosion on adjacent land.
- 14 7. Utilization of marginal farmland or poorer grades of land for new railroad or highway  
15 construction projects where feasible in order to preserve tillable farmland.
- 16 8. Utilization of existing rights-of-way for new highways to the maximum extent feasible in  
17 order to minimize acquisition of new lands for highway purposes.
- 18 9. More equitable compensation to landowners for disruption of farming operations by  
19 highway construction.

#### 21 **Other**

22 We support efficient mass transportation. We will support legislation or regulations to allow  
23 disconnection of counties by referendum from mass transportation authorities.

24  
25 We encourage the use of biodiesel and ethanol by mass transit systems.

26  
27 We support efforts to streamline the transportation project delivery process to reduce  
28 unnecessary time delays including:

- 29 1. Simplifying the environmental process for projects with few impacts.
- 30 2. Involving appropriate reviewing agencies early in the process to help expedite overall  
31 project schedules.
- 32 3. Requiring greater coordination among federal reviewing agencies and setting time limits  
33 for their review.

34  
35 We support efforts to educate policy makers and the public to ensure they understand:

- 36 1. The value and necessity of efficient and effective transportation infrastructure.
- 37 2. The complexity and cost of both long-term maintenance and expansion of transportation  
38 infrastructure to meet future needs.
- 39 3. The importance of interconnectivity between modes.
- 40 4. Requiring reconstruction projects be completed as quickly and reasonably as possible  
41 minimizing impacts on the traveling public.

## 42 43 44 45 **128. TRANSPORTATION -- HIGHWAYS**

### 46 **Finance**

47  
48 We will support:

- 49 1. Legislation which provides that user fees such as motor fuel taxes, licensing and  
50 registration fees are the basic means for funding highway transportation systems in Illinois  
51 at both state and local levels.
- 52 2. The increase of State of Illinois motor fuel tax by up to 10 cents per gallon. The current  
53 distribution formula should be left intact.

- 1 3. As an alternative to increasing the flat motor fuel tax, the creation of a new tax as a  
2 percentage of the wholesale price of fuel. This new tax would be distributed under the  
3 current motor fuel tax distribution formula.
- 4 4. Legislation collecting road user fees from hybrid, alternative fuel and electric highway  
5 vehicles.
- 6 5. Legislation to increase the share of state-collected highway user fees allocated to units of  
7 local government for road and bridge construction and maintenance needs.
- 8 6. Legislation increasing the state's township bridge program fund to at least \$30 million  
9 annually.
- 10 7. Legislation providing for a more equitable formula for allocating motor fuel tax funds to  
11 counties based on both vehicle registration and road mileage.
- 12 8. Use of all highway user fees including that part of motor fuel tax funds derived from  
13 highway use solely for construction and maintenance of roads, streets, and bridges.
- 14 9. Legislation permitting establishment of transportation impact districts by road districts and  
15 counties.
- 16 10. Repeal of current Illinois Department of Transportation (IDOT) requirements stipulating  
17 that contractors must have federally approved apprenticeship and training programs to be  
18 considered a responsible bidder for road projects.
- 19 11. Legislation to prevent the Illinois State Toll Highway Authority from constructing any new  
20 toll highways or extending any existing toll highways unless state law is changed to allow  
21 for strict accountability to the Illinois General Assembly.

22 We will seek legislation that holds the Illinois State Toll Highway Authority accountable and  
23 responsible for the repair and maintenance of all overpass decks that are the result of tollway  
24 construction.

25  
26 We believe Illinois highways currently funded by tolls should remain as toll roads.

27  
28 We will oppose:

- 29 1. Legislation which would abolish motor fuel tax refunds for non-highway use.
- 30 2. Mandatory bike paths on rural roads without adequate state funding.
- 31 3. The sale or lease of any Illinois highway system.
- 32 4. Formation of any new toll highway authority in Illinois unless existing state law is changed  
33 to allow for strict accountability to the Illinois General Assembly.
- 34 5. Selling or leasing of Illinois' toll highways.

### 35 36 **Infrastructure**

37 We will support:

- 38 1. Proper administrative authorities in the development of standards for the construction of  
39 local roads and bridges that correspond with the physical needs of the highway system  
40 and the economic ability of local authorities to pay for them.
- 41 2. The use of weight limit postings and associated permits only for the purpose of protecting  
42 the physical integrity of the road.
- 43 3. Legislation requiring weight limit postings intended to protect roadway surfaces during the  
44 spring thaw timeframe be based on a per-axle limit rather than on a gross vehicle weight  
45 limit.
- 46 4. Legislation granting vehicles hauling agricultural commodities from the field to the first  
47 point of delivery, an additional axle weight tolerance. That tolerance should match what is  
48 allowed by the state statute pertaining to the harvest season permit, but without the need  
49 for a written permit.
- 50 5. Greater emphasis on roadway improvements and maintenance of existing state highways  
51 while incorporating new construction technologies, with reduced emphasis on new  
52 expressways and interstates.

- 1 6. An approach to funding the replacement and/or maintenance of roads and bridges by the
- 2 IDOT through improved consultation with the local highway officials and the public as to
- 3 the necessity of each project considered.
- 4 7. Requiring improvements to major highways be designed to a higher standard providing for
- 5 significantly longer life before repairs are needed.
- 6 8. The revision of IDOT design standards on state highways to consider the size of modern
- 7 farm equipment.

8  
9 **Access**

10 We will support:

- 11 1. Legislation that would ensure the continuity of local collector road systems by requiring
- 12 those routes be continuous, regardless of jurisdiction, between logical beginning and
- 13 ending points such as county or state highways or major traffic generating facilities, or that
- 14 a reasonable, viable alternate route be made available.
- 15 2. Funding to assist in upgrading highways that retain business traffic through rural
- 16 communities (where locally desired) while improving safety and traffic flow.
- 17 3. Requiring all road authorities that seek to make any change to an existing road, that will
- 18 result in establishment of a lower weight limit, to develop a plan for ingress and egress to
- 19 existing livestock and other agricultural facilities that have an established access to that
- 20 roadway. The plan must be functional, economically feasible, and reasonable with
- 21 agreement by both parties.

22  
23 We will seek legislation:

- 24 1. Allowing local jurisdictions, at their discretion, to permit the movement of vehicles hauling
- 25 for production agriculture which exceed size or weight limits on posted roads where
- 26 necessity dictates the need for the shipment to or from a specified farm.
- 27 2. That requires a unanimous decision to permanently post a reduced weight limit or close a
- 28 road district road be shared equally with the highway commissioner, the county engineer
- 29 and a majority of the elected board members associated with that road district.

30  
31 **Other**

32 We will support:

- 33 1. Legislation permitting temporary signs within a reasonable distance of federal and state
- 34 highways, other than interstates, directing traffic to seasonal farm produce outlets.
- 35 2. Legislation establishing an adopt-a-highway program for rural sections of all roads in the
- 36 state.

37  
38 We encourage:

- 39 1. Road maintenance officials to offer landowners/land managers/operators the chance to
- 40 accept or refuse soil removed from adjacent road ditches.
- 41 2. State and local highway officials to provide farm and field entrances that accommodate the
- 42 needs of modern agriculture. This includes encouraging state, county, and township
- 43 highway departments to use a plastic, bendable marker post instead of metal posts where
- 44 object markers are used.

45  
46  
47  
48 **129. TRANSPORTATION -- RAILWAYS**

49  
50 **Finance**

51 We support:

- 52 1. Strengthening of existing state laws so the Illinois Commerce Commission (ICC) can deal
- 53 effectively with unfair rent increases imposed by railroads upon their tenants, and

54  
55

- 1 unrealistic sale prices for land offered by the railroads to tenants or other prospective  
2 buyers of railroad property.
- 3 2. Legislation requiring full disclosure of the railroad grain transportation bidding process to  
4 the individuals who participate in the process after all bids have been made and rail cars  
5 have been allocated.  
6

7 We oppose diversion of railroad earnings to holding companies or non-railroad businesses at the  
8 expense of maintaining a viable railroad.  
9

#### 10 **Infrastructure**

11 We support efforts to have more at-grade highway/railroad crossings signalized with warning  
12 lights and gates. Where closure of the crossing would impose undue hardships on users of the  
13 road, greater flexibility should be shown by the ICC on safety considerations. Efforts should be  
14 made to ensure that the ICC considers accident history and emergency access along with other  
15 locally important issues in decisions on petitions to close railroad crossings.  
16

17 We encourage railroads to give advance notice of construction intentions to local residents and  
18 local government bodies prior to taking formal action on permit applications.  
19

20 We oppose parallel branch line mergers of rail systems and the granting of railroad  
21 abandonments which tend to lessen overall transportation competition or where there is or could  
22 be proven traffic potential.  
23

#### 24 **Land Use**

25 We support legislation and regulations to provide that in the case of a railroad abandonment, the  
26 current owner of the tract of land from which the railroad right-of-way was obtained be given the  
27 right of first refusal for such land, including mineral rights, based upon the fair market value for  
28 comparable property rights in the area. If the current owner fails to exercise such option, the  
29 adjacent landowners will be offered the next right of refusal.  
30

#### 31 **Access**

32 We support:

- 33 1. Expedient placement of "exempt" postings at public road crossings on railroads which are  
34 abandoned.
- 35 2. A requirement that a notice of proposed crossing closure be posted at crossings 30 days  
36 in advance of a hearing to consider closure of the crossing.
- 37 3. The prompt communication, assessment of damages, cleanup and processing of claims  
38 incurred by both private landowners and units of local government following a train  
39 derailment.
- 40 4. Oversight by the ICC of median barriers and crossing safety devices placed in the  
41 approach to grade crossings which prohibit and/or hinder the flow of agricultural  
42 equipment through grade crossings.
- 43 5. Legislation that will allow the Surface Transportation Board, on petition of a state, to  
44 declare all or part of a state to be an area of inadequate rail competition, with special rail  
45 customer remedies that would apply in such areas.  
46

#### 47 **Other**

48 We support:

- 49 1. Giving authority to the state to force a railroad to temporarily cease operations on a given  
50 stretch of track due to emergency conditions.
- 51 2. Maintaining state oversight of railroads under the purview of the ICC.  
52  
53  
54  
55

1 We will:

- 2 1. Work with the railroad industry and the ICC to establish regulations that require parked  
3 trains to maintain a 500-foot distance from ungated and/or unsignaled at-grade crossings  
4 in unincorporated areas to provide safe visibility for motorists. Trains parked at  
5 businesses should be exempt from this requirement when it is necessary while loading or  
6 unloading, but still maintain the maximum setback distance possible.
- 7 2. Meet with railroad officials to determine ways to improve rail service to agriculture across  
8 Illinois.
- 9 3. Encourage rail passenger services to maintain or improve service and increase efforts to  
10 become self-sufficient.
- 11 4. Continue to monitor high speed rail projects. We will oppose the implementation of these  
12 projects unless the following conditions are included:
  - 13 A. Safe and convenient public access is provided across the railroad.
  - 14 B. Owners of private crossings are provided continued access.
  - 15 C. Landowners are fairly compensated for any takings associated with the project.

### 19 **130. TRANSPORTATION -- VEHICLE REGULATIONS**

#### 21 **Vehicles**

22 We will support:

- 23 1. Redefinition of "commercial motor vehicle" from the 10,001 pound threshold to that used  
24 for the Commercial Driver's License (CDL) program – 26,001 pounds.
- 25 2. Legislation to reduce the requirement for semi-annual truck safety inspections to an  
26 annual inspection.
- 27 3. Legislation to require recreational motor vehicles and recreational trailers to pass a safety  
28 inspection on the same basis as trucks and trailers.
- 29 4. Legislation permitting second division vehicles with expired safety test decals to be driven  
30 to a repair facility and to a safety test lane.
- 31 5. Efforts to develop regulations which encourage the establishment of more truck safety test  
32 lanes in the state.
- 33 6. Legislation that would allow annual reporting of mileage on mileage plates.
- 34 7. Efforts to allow low-mileage operations to pay a flat annual fee in lieu of submitting  
35 quarterly reports as a means of complying with the International Fuel Tax Agreement  
36 (IFTA).
- 37 8. Legislation to remove the requirement to post a bond to purchase a mileage plate.
- 38 9. Proration of renewal fees for farm truck and trailer plates based on the month of  
39 application.
- 40 10. Legislation establishing uniform maximum weights for all truck and trailer license plate  
41 classifications that share the same letter designation.
- 42 11. Regulation establishing uniform release mechanisms on all seat belts on newly  
43 manufactured vehicles.
- 44 12. Programs and actions that encourage the inclusion of automatic Daytime Running  
45 Lights/Lamps (DRLs) and automatic headlights on newly manufactured vehicles.
- 46 13. Legislation to expand the applicability of the harvest season permit to include perishable  
47 produce.
- 48 14. Legislation to establish higher weight limits for farm wagons and non-licensed trailers.

50 We will seek legislation to:

- 51 1. Require that trailers submit to safety test inspections at the same weight classification as  
52 required for trucks.
- 53 2. Establish a low mileage license for trucks with a reduced number of allowable miles and a  
54 commensurate reduction in fee.

55

- 1 3. Decrease the cost of a "farm" truck plate until that cost falls at or below 50 percent of the  
2 cost of a flat weight plate.
- 3 4. Require all rural mail delivery vehicles to have flashing yellow lights on top of the vehicle  
4 and a sign on the rear of the vehicle reading "U.S. Postal Service Mail Carrier."
- 5 5. Establish uniform truck and trailer lengths on Class III routes, other state highways, local  
6 roads, and streets.
- 7 6. Change federal regulations to keep written warnings from appearing on Compliance,  
8 Safety, and Accountability (CSA) reports.
- 9

### 10 **Drivers**

11 We will support:

- 12 1. Enhanced driver education related to slow moving vehicles, large trucks, horses, and  
13 horse drawn vehicles.
- 14 2. Limiting the need for bi-annual Department of Transportation (DOT) driver physicals to  
15 only those drivers required to have a CDL.
- 16 3. A policy change within law enforcement agencies whereby officers will direct trucks to a  
17 nearby safe area to conduct their inspection, thus avoiding closure of a traffic lane for that  
18 purpose.
- 19

20 We will seek legislation to allow a CDL applicant to have a checklist with them during the pre-trip  
21 inspection portion of the CDL testing process.

22  
23 We oppose the federal regulation requiring that state-licensed physicians submit to training and  
24 certification to be eligible to perform DOT physical examinations for truck drivers.

### 25 **Government Oversight**

26  
27 We will support:

- 28 1. Efforts to bring about greater uniformity and reciprocity among states on regulations  
29 affecting trucks and truck operators.
- 30 2. Efforts to ensure uniform interpretation and application of motor vehicle regulations by all  
31 government administrative and enforcement personnel.
- 32 3. Efforts to clarify and simplify the Vehicle Code and regulations relating to farm trucks and  
33 trailers.
- 34 4. Encouragement of the Division of Motor Vehicles to accept truck license plate renewals at  
35 all driver services facilities.
- 36 5. Efforts to have the County Engineer's office act as a clearing house for overweight and  
37 over dimension permits on all county and road district roads.
- 38 6. Having more Commercial Drivers License testing facilities be made available in the state  
39 for written and driving examinations.
- 40

41 We will seek legislation to:

- 42 1. Allow alternative means of posting bond, such as credit cards, for traffic and weight  
43 violations by all drivers licensed in the State of Illinois.
- 44 2. Permit second division vehicles, designed for pulling or carrying freight or cargo, that are  
45 visibly empty to forego the procedure of weighing at the scales in order to reduce truck  
46 traffic congestion at weigh stations.
- 47 3. Recognize vehicle license registered weight rate, rather than the vehicle manufacturer's  
48 gross vehicle weight rating, to determine the eligibility of any vehicle for the purpose of the  
49 driver skills test to acquire a driver's license.
- 50

51

49  
50  
51  
52  
53  
54  
55

**Other**

We will support:

1. The establishment of a state agency/transportation industry group designed as a coordinating mechanism to resolve problems associated with the regulation of motor vehicles.
2. Allowing anhydrous ammonia to be transferred from a cargo tank motor vehicle with a maximum capacity of 12,000 gallons into containers of 3,000 gallons capacity or less mounted on farm vehicles or into containers of 6,000 gallons mounted on motor-driven applicators provided that the cargo tank motor vehicle has been converted to proper industry standards and engineered and regulated equipment.

We urge local law enforcement officials and local civic and public service organizations to promote all terrain vehicle safety programs.

We will encourage recreational users of roadways (runners/walkers/bikers) to wear reflective materials when on the road from dusk to dawn.

We will seek legislation to:

1. Establish a notification procedure that would provide property owners with the necessary information to identify vehicles that are towed from their property.
2. Exempt transportation of agricultural products from farm to market from USDOT number and UCR registration.

**131. TRANSPORTATION -- UNMANNED AIRCRAFT SYSTEMS**

We support:

1. The use of Unmanned Aerial Vehicles (UAVs) for commercial purposes (i.e., agricultural, forestry, and other natural resource use).
2. Working with the Federal Aviation Administration (FAA) to review the legal and technical issues related to agricultural UAV use.
3. Reasonable FAA regulations regarding agricultural use and permitting for private and commercial applications.
4. Requiring the operator of the UAV to gain the consent, in writing, of the landowner or tenant, if the UAV will be surveying or gathering data above the private property.
5. The development of guidelines for the safe operation of UAVs for all users.
6. Landowners and tenants to be able to fly their fields, for any reason, without it being considered a commercial activity.
7. Protecting property and privacy rights of farms and livestock operations while encouraging legitimate commercial and recreational uses of UAVs.

We oppose:

1. Federal, state, and law enforcement agencies using UAVs for the purpose of regulatory enforcement, litigation, and as a sole source for natural resource inventories used in planning efforts.
2. FAA regulations that classify UAVs as fixed-wing aircraft.
3. FAA regulations that require a private pilot's license and third-class medical certification to operate UAVs under 55 pounds.
